REPORT FROM THE 25th U.S. CONSUMER ELECTRONICS SHOW

RSONAL CO

LONELY Genie I Microcomputer, early eighties, with large peripheral family but currently unattached, would like to meet interesting, attractively packaged software, Genie or Tandy specification, for programming, problem solving, entertainment and long-lasting friendship. Reply in confidence. Box No RS232.

ANSWERING MACHINES

ingenious ...but lonely!

Buying your first Genie I microcomputer is just the start of a long and enthralling adventure, for it won't be long before you will want to expand your system with some of the wide range of peripherals which make up the complete Genie System.

Firstly there is the **Expansion Box,** which immediately expands your Genie's capacity to 32K RAM, and up to 48K RAM if required. It can be connected to 4 disk drives, a printer, RS232 interface or S100 cards.

Then there is the **Printer,** a compact unit with 80 column, 5 x 7 matrix print-out, which connects to your Genie through the Expander, or via the Parallel Printer Interface.

The **Disk Drive** gives you greater storage capacity and full random access file handling, with the option of double-density through a special adapter.
New Dual Disk Drive now available!

Finally, there is Genie's very own **12" Monitor,** a must if you want to let the rest of the family watch their T.V. in peace!
Available in B & W or green tube.

The supreme advantage of the Genie I system is its compatibility with the TRS 80, which means that literally 1000's of pre-recorded programs are already available, just waiting to be plugged into your Genie!

The recent improvements in the Genie system, including Extended Basic, sound unit and machine language monitor, make it the ideal system for the committed hobbyist, and an excellent and easy-to-use educational tool.

NEXT MONTH

WHEN (some people say "if") Prestel takes off, its games pages will enjoy a huge following. Even now, with Prestel sets mainly in business hands, the games pages are the most popular thing on the system. Next month we look at Prestel games and the limitations it imposes on its designers.

A CHANCE to take on your computer at the classic tank warfare game of Kriegspiel next month. We also feature Sub Attack on the VIC-20, Engineer and Yahtzee among our other games listings.

PINBALL machines are now talking back! Hear what they've got to say as we look at the latest arcade inhabitants.

Isn't it about time you took out a subscription to Computer and Video Games?

Whether your idea of a worthwhile challenge is saving Europe in a war game, sharpening your chess strategy, or landing a 747 on a dark night, computers can make it possible.

Computer games are reaching new levels of exhilaration, realism and imagination. They can already test your intellect and dexterity to its limits, in the not-too-distant future there will be no limits to the excitement they can simulate.

Computer & Video Games is the monthly magazine designed to make sure you get the most out of your computer.

It brings the best entertainment out of all types of computer, from personal Sinclairs, Ataris, Tandys, VICs, Apples and PETs to viewdata and arcade machines.

Every issue's packed with pages of games programs for you to key-in to your machine. And you don't have to be a computer expert. Each month there's reviews of new computer and video games, regular pages on chess, adventure and kit-building.

Learn to program or improve your programming skills with our regular features on the art and find out how to add graphics and sounds to the games you invent yourself. There's also regular brain-teasers, prizes plus hints on how to beat arcade video machines.

Computer and Video Games is packed with new ways for people to get fun out of computers. Make the most of your leisure time. Make sure of a copy of Computer & Video Games.

Available at all leading newsagents

I would like to take out an annual subscription. I enclose a cheque/P.O. for £10 (£20 overseas), for twelve issues. Computer & Video Games, Competition House, Farndon Road, Market Harborough, Leicestershire.

Computer & Video Games.
The magazine that makes computers fun.

THREE PET TITLES from Nick Hampshire

LIBRARY OF PET SUBROUTINES

A book which will save the software designer considerable time by providing 55 proven subroutines to integrate with his own programmes.

Each subroutine is preceded by a page of general information describing its purpose and implementation and possible problems that may arise. Basic machine language and a combination of both are used throughout this publication.

We like this book very much and thoroughly recommend it.

Printout

well prepared. fun to use and will help in better program development.

Compute

All 3 publications are currently used by Commodore Business Machines

THE PET REVEALED

A reference book which details everything one need to know about the workings of the PET. Containing information helpful in writing more elaborate programmes which in turn create more interesting functions.

Should be congratulated! Supplies some much needed useful and correct documentation.

Compute

PET Revealed will save you an awful lot of time. I rate this book as good value for money.

Printout

PET GRAPHICS

This book has two objectives. One to provide the reader with an introduction to the programming techniques used to generate graphic displays. Two providing the programmer with a complete package of machine code routines giving a wide range of normally unavailable graphic functions. The book contains many, comprehensively analysed routines and plenty of graphs to illustrate the effects created.

an invaluable guide to graphics on the PET.

Micro Forum

Please send me:

copy/ies of Library of PET Subroutines @ £10.00 each

copy/ies of The PET Revealed @ £10.00 each

copy/ies of PET Graphics @ £10.00 each

I enclose a cheque for £ payable to Computabits Ltd. P.O. Box 13, Yeovil, Somerset.

THE CASE AGAINST...

Dear Sir,
I am disgusted to read your article on Softporn in the January issue of your magazine. The magazine is purchased each month by my 13-year-old son, and I feel that articles of this nature are nothing less than criminal.

I appreciate that your magazine is not aimed specifically at children, but you must realise that it has a great attraction to those in my son's age group due to the increasing interest in computers in school. I know that you are not responsible for producing the Softporn program, but it is because of the irresponsible action you have taken in reviewing such trash that people become aware of the availability of these items, the sale of which further encourages their production.

In future can I ask you to take a more responsible stand against such items by refusing to review them, advertise them or include them in any way in your magazine, as I am certain that programs such as these are not only a direct conflict against my own Christian principles, but also offend many people and encourage a lowering of moral standards.

A. Standeven
Hadfield
Hyde
Cheshire

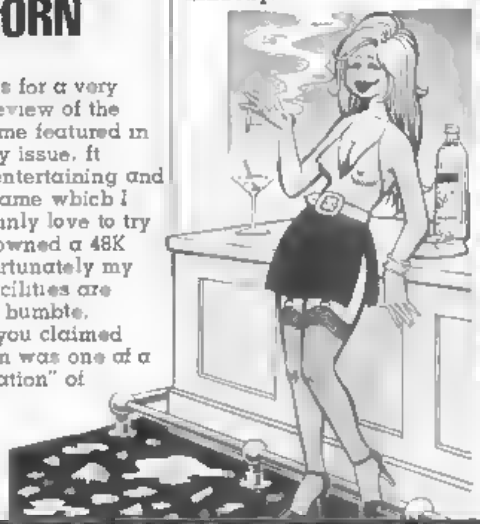
... AND FOR, SOFTPORN

Dear Sir,
Many thanks for a very enjoyable review of the Softporn game featured in your January issue. It sounds an entertaining and humorous game which I would certainly love to try — if only I owned a 48K Apple. Unfortunately my computer facilities are rather more humble.

I noticed you claimed that Softporn was one of a "new generation" of software aimed at the adult user. Is it likely that we will soon be seeing a computerised version of Libido and do you know of any similar "fun" adventures for the Acorn Atom?

C. Jacks
Chells
Stevenage
Herts

Editor's reply: Apart from its misleading title, Softpora seemed an innocent piece of fun and quite typical of the genre of adventure game presently reaching our shores from America. The magazine's function is to inform its readers about new trends in the computer games industry and I don't feel we can fulfill this property if we hide from any aspects of that industry.



Do you have any views or comments on Computer & Video Games? If so we would love to hear from you. We will also do our best to find answers to any queries you may have or solve problems you might be experiencing with your computer. Please drop us a line at: Computer & Video Games, EMAP, Durrant House, 8 Herbal Hill, London EC1R 5JB. If you have already sent in a letter which has not yet been published, please bear with us as we have been overwhelmed by mail after our early issues. We will get around to your query as soon as possible.

A DEALER TO RELY ON

Dear Sir,

At the time of writing I would like you to mention to your readers a company whose trading standards are second to none. A. J. Harding & Co (Molimerx), from Bexhill on Sea.

Two months ago I purchased a "disassembler" program from them and when I purchased my printer (locally) last week, I found that I could not get a print out due to incompatibility between TRS-80 and Video Genie. However, I wrote to Molimerx and by return of post I received another tape compatible with my machine. They didn't even ask me to return my original purchase. The point of this is, I have had my share of sending money off for software and waiting weeks, and, eventually after numerous letters receiving my goods.

I came to this company through reading a similar letter to this and I have never been let down. Orders are despatched return of post. I shall now be writing to Mr Harding to thank him personally (and return the other tape).

I have no connection with the company, my only motive is to thank them and perhaps help newcomers to computing find a reliable software dealer. Because, they will soon learn, there are a lot of shady dealers in this game.

Keep up the good work, I am looking forward to the next edition.

K. Hook
Burnley
Lancs.

ADVENTURE ON COURSE

Dear Sir,
As a student taking a course in computing I am considering writing a program on the theme of adventure. Because of this, I am very interested in Keith Campbell's article and look forward to reading it each month.

I would, however, be grateful if you could possibly include in your article certain details of the program which can be incorporated into a 380-Z computer as this is the computer with which most of my project work is based.

Also, I was wondering if articles on flowcharts and how they work, hardware computer storage, would be included in future editions because I'm sure if this were done, it would generate a great deal of interest among beginners.

Ian Clark
Dalton
Huddersfield
Yorkshire

Editor's reply: I hope you have been able to follow the Adventure columns so far Ian, as Keith Campbell has taken care to keep the instructions within the range of any Basic user.

We have not featured Research Machines' 380-Z computer in the magazine as yet because it is a specialist educational computer far out of the price range of most home users. But we will try to rectify that for school and college computer users in the future.

AT LAST!

ALL PRICES INCLUSIVE

More VIC software will be available by the time you read this. Phone 051 227 2642 for details. Generous DEALER DISCOUNTS available — phone Dave on 051-227 2299 for details.

Sinclair ZX81 * NEW RELEASES *

DICTATOR

Another great adventure game from Bug-byte for the 16K ZX81. This time you are the president of a small state. The object of the game is to avoid revolution, escape assassination attempts and maintain your popularity while managing the secret police and army and maintaining a secure economy. This is a very complex simulation utilising the whole 16K and the cassette comes with an 8 page booklet giving full instructions and hints on how to survive.

Can you stand up to the pressures of life as a dictator and prevent unrest from spreading before it's too late?

PRICE £5.00

CONSTELLATION

Turn your ZX81 into a telescope! This program will produce a simulation of the night sky as seen from any chosen point on earth at any time this century. You can point your 'telescope' in any direction, move it up, down, left and right, zoom in or pull out and display the stars by magnitude or constellation.

PRICE £6.00

OTHER ZX81 SOFTWARE FROM OUR RANGE

ZXAS assembler	£5.00	INVADERS	£4.00
ZXDB disassembler debug	£6.50	3D OXO & MARS RESCUE	£4.50
MULTIFILE filing system	£17.50	VIEWTEXT	£7.00
THE DAMSEL & THE BEAST	£6.50

ACCESS/BARCLAYCARD orders accepted on 051-227 2642 (24 hrs)

BUG-BYTE SOFTWARE

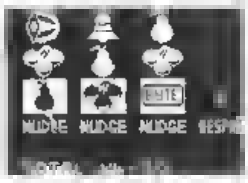
98-100 THE ALBANY,
OLD HALL STREET
LIVERPOOL L3 9EP

ACORN ATOM SOFTWARE

Acorn Atom INVADERS

The best invaders game around for your Atom. Full use of colour graphics and sound. Four separate attack waves. Four different types of aliens to destroy. Requires 8K of memory. Fast machine code action. Full instructions supplied. Only £6.00

Acorn Atom FRUIT MACHINE



A brilliant, extremely fast machine code version of the popular fruit machine game. Hold, nudge, respin and gamble. Realistic sound and graphics. Runs on any Atom with 8K of memory. Only £4.00

CHESS

THE PROGRAM YOU'VE BEEN WAITING FOR!

Fantastic machine code chess game for the 12K Atom. Features include: screen layout using algebraic notation, 7 levels of play, castling and en passant, computer plays black or white. Supplied on cassette with instructions. PRICE ONLY £9.00

747

FLIGHT SIMULATION PROGRAM FOR THE 12K ATOM

Written for Bug-byte by a 747 pilot. Accurate simulation of a 747's cockpit display including, altitude, rate of climb, attitude, flaps etc. and graphic display of horizon. Situation and attitude indicator allows you to guide your craft to the landing strip. On making your final approach the display changes to a high resolution 3D representation of the runway coming up to meet you. A real test of skill. Finding the runway is quite a challenge — landing safely is even more difficult. If you succeed you are awarded a skill rating and the chance to take off and try again.

REQUIRES FLOATING POINT ROM PRICE ONLY £9.00

DON'T FORGET — OUR PRICES INCLUDE VAT & POSTAGE

GALAXIAN

Fantastic high-resolution (mode 4) arcade game with fast swooping aliens, excellent sound effects and high score table. 12K. PRICE £6.00

BACKGAMMON (16K BASIC)

The program is a fast, full implementation of a good backgammon board and allows you to play the standard game against the computer. Playing instructions are not included. But if you can't already play the game there are several books available to teach you and the Atom makes an ideal, ever willing partner to build up your play or strength against.

Computer responses are rapid (approximately 10 seconds) and the program will not accept illegal moves. Dice throwing is controlled by the computer. £7.00

LABYRINTH (16K, P.P. BASIC, GR mode4, sound)

High resolution colour graphics (also effective in Black & White) make this a 3D maze program one of the best versions available. To help you find your way through the bewildering array of corridors, at the 30 x 18 cell random maze you can call up (as a 25-step) of the maze in the former game called. It is also shows only the portions of the maze which you have explored.

Your task is to find your way to the treasure room at the centre of the maze and then escape through the exit. To make things more difficult, several monsters (including the dreaded Tyrannosaur) are loose in the maze and you will have to fight you way past them. The types of monster present and their weapons will be different for each game.

£7.00

REQUIRES THE FLOATING POINT ROM

LUNAR LANDER (12K BASIC & Gr mode4)

A mighty skill class arcade style program. A rugged lunar landscape is shown as you have to attempt to land your craft safely on its flat areas, by varying the thrust of your main & steering rockets. If you succeed the ship takes off and you have to try to land it again under slightly more difficult conditions. This continues, until you have reduced 3 ships to heaps of rubble.

On screen readout of fuel and score. Several pilot levels. A record is kept of the high score. If you are sufficiently expert, pilot, you will be rewarded with extra ships. Generally a cut above the average lunar landing!

GOLF (8K T.P. BASIC)

A full 18 hole par 72 course, complete with fairways, rough, bunkers, pond, streams & greens. Skill and careful club selection are required to get round with a good score. To make things more difficult you have to specify a bias, a good game, which the program will reproduce and your handicap. At the end of the round the program produces your scorecard for the round.

A highly entertaining program, which is likely to have you up late into the night straining for a par. £9.00

REQUIRES THE FLOATING POINT ROM

ALL OUR PRICES ARE INCLUSIVE!

Please cross cheques/POs & make them payable to: Bug-Byte.
Payment may be made by Access or Barclaycard, and there is a 24hr answering service on 051 227 2642.

WIZARD COVERS

Dear Sir,
I can always epal your magazine without any trouble in my local newsagents — those fabulous front covers are the best in the trade!

I particularly enjoyed the wizard and dragon scene which featured on your January cover and feel Paul Bonner should be kept in mind for future issues. Did he also draw the Dragons which went with the Pet game?

I do not own a Pet, which is a pity because I liked the sound of the Dragon Druggm' game and the write-up that went with it had me in stitches.

All the best for the new year and thanks for being the best thing to come out of 1981.

Gerry Coulson
Teddington
Middx.

Editor's reply: We will certainly keep Paul Bonner in mind for future front covers Gerry, but he didn't draw the dragons which featured inside the magazine. These came from the pen of Dorian Cross and you will be seeing a lot more of his work in the magazine.

PACK UP YOUR TROUBLES

Dear Sir,
Having purchased a Sinclair ZX81, and finding myself with some money left after Christmas, I decided to purchase the 16K RAM pack (despite warnings of the combination crashing).

I think I should have heeded the warnings as pack No. 1 proved to be the cause of much unprintable language. I returned the faulty pack to my local W.H. Smith and set off home again with pack No. 2.

This worked perfectly and I have had no trouble at all with it.

I hope to see your excellent magazine printing a 16K games program for the ZX81 in the not too distant future, after all I can't be the only Sinclair owner with a working RAM pack or can I?

David Freeman
Raynes Park
London SW20

Editor's reply: We have a 16K adventure for your Sinclair coming soon David.

VERY BASIC ON THE IBMS

Dear Sir,

I do not own a computer myself but I am a computer programmer by profession and have access to an IBM system 34 at work. We have a few games on it but they are all very basic games written by IBM trainees, I think. Are there any games available for such a computer, particularly adventure games?

T. A. Johnson
South Reddish
Stockport
Cheshire

Editor's reply: The only games available for IBM machines are written by individuals and not by the firm itself. There are some tapes in installations which are used for demonstration purposes, but these are usually passed around to people interested in playing games.

According to IBM no other firm is involved in writing games software for its computers, so your only chance is to exchange games with your fellow mainframe games enthusiasts. But, be warned, playing games on mainframe computers is notoriously clandestine activity and neither companies or individuals are very forthcoming on the subject.

RESPONSIVE READERS

Dear Sir
Much as I admire your splendid magazine which I have read from the first month I have one grumble. The free information service which was in the last two issues looked a very good idea, but as I was to find out, when put into practice the idea did not work out as well as I expected it would.

Being a TRS-80 model 1, level 2 microcomputer user, I used the information service to get replies and data on the Tandy.

I waited and waited after sending off the card on 1 November, I have not even had a wisp of a reply.

Incidentally I notice with interest that the information service was taken out of the magazine in the January issue.

Also I would like to ask if you are intending on publishing reviews on various microcomputers especially the new BBC computer in addition to the reviews on software excellent though they are.

Finally could you confirm for me if it is true that Commodore are bringing out a new computer called the VIC-40, presumably containing a double amount of characters.

Warren Smith
West Bromwich
West Midlands

Editor's reply: It is time to make a full and frank apology about the reader reply card service we offered with our first two issues. It was supposed to benefit both readers and advertisers and free information services work well in many magazines. Unfortunately the response to our first two issues was so phenomenal that the company we used to process the cards found itself swamped and a backlog built up.

As the service was swamping advertisers and therefore, disappointing readers we decided to drop it. All the cards we received have been processed and sent out.

Turn to the Hardcore section Warren, and you will see that we are giving space to machine reviews.

Finally, there are plans for Commodore to bring out a VIC-40 computer which will have double the amount of characters of the current VIC. It may be introduced to the U.K. later this year.

PHILIPS' "MICRO" PAC

Dear Sir,
I am the owner of a Philips G7000 Videopac computer, and I would like some information on which cartridge is supposed to turn your Videopac into a home computer, instead of a T.V. game. The two questions I have to ask are: is the game programmable to such games as Adventure, Space Invaders etc.

Paul Owens
Wishaw
Strathclyde
Scotland

Editor's reply: The Videopac Computer cartridge was brought out when Philips first launched the G7000 two years ago. Then there were fewer microcomputers on the market and it was hoped that the "pac" No. 8 on the Philips range would act as an introduction to computers and the language they use. Now the instructions and the capabilities seem out of date and although the Videopac does allow you to use graphics (you are limited to 100 steps (about 1K) of program.

PAC MAN 2

Pac Man 2 is based on the latest hit game. It is a true colour game of arcade quality, action packed and addictive. Pac Man eats the dots. Ghosts chase Pac Man. Eat the power pill and Pac Man can eat the ghosts. The object of the game is for Pac Man to eat as many dots as possible by running and destroying Ghosts. Bugs and Hyperbugs. Watch out for the Smart Ghosts. Pac Man 2 is a sequel to Pac Man. The most exciting and complex game of its type ever produced and is now available for the first time. Get a Pac Man 2 and be addicted.

SPACE INVADERS

Based on one of the most popular arcade games. Space Invaders is full of action with multi shaped brilliant LED vessels, including attack ships, bombs, defenders, missile rockets and a beam force cannon plus exciting extreme sound effects. The attack ships attempt to bomb the ground defenders as they are moving. You manoeuvre the missile rocket — avoiding alien bombs — and destroy the invader force as quickly as you can. Progressive degree of difficulty. Includes automatic digital scoring. For ages 6 to adult.

CASE FOR DECODING

Dear Sir,
In last month's issue of *Computer and Video Games* I read in one of the articles that games programs written in machine code are better than games written in any other language because they are faster.

I don't know much about how computers work and wondered if you could explain how machine code works and why all games are not written in it.

Frank Gree
Godalming
Surrey

Editor's reply: Machine language is difficult to use. It's all right for machine to machine communication but not for man-machine communication. It is possible to group the binary coded words together so that each step in the program can be represented by a word, or mnemonic, describing that operation. This is called mnemonic machine code.

Machine language is the most primitive programming language from the human point of view, but it is the only language which the computer can really understand. The manufacturer of a particular processor provides the user with a set of instructions. Each instruction relates to the operation required. The instructions may be quite simple: to add the contents of two registers and place them in a third.

A program of this type may look like this:

```
10101101
01000000
00000000
01101101
01000001
00000000
10001101
01000010
00000000
```

It needs a well-trained eye to see what this program is supposed to do: (a simple addition).

The computer must perform considerably more complex operations than this, which makes it extremely inconvenient to program in machine code.

One way of simplifying the machine language is to equip the computer with a small conversion program to translate the binary figures into hexadecimal code. The program example given above will then read like this: AD, 40, 00, 8D, 41, 00, 8D, 42, 00.

The programmer can make life a bit easier for himself by assigning a mnemonic to each hex. byte. For example, the instruction "load the contents of memory address xxxx into the accumulator" could be written as LDA XXXX instead of AD XXXX. This type of machine code programming still needs the programmer to know the address location of the data and instructions.

Our program now becomes:

```
LDA 0040  i.e. load accumulator with contents of 0040
ADC 0041  i.e. add contents of address 0041 to number in accumulator
STA 0042  i.e. store result in 0042
```

The programmer has to know that the first number is in address 0040, the second in 0041 and that the answer will be found in 0042.

High-level languages are oriented towards the user and his problems rather than to the machine. A high-level language is comparatively easy to learn and relatively simple to read and write.

A simple addition in Basic, for instance, is written on a single line: LET C = A + B.

Programming in a high-level language is very efficient as far as programming time is concerned. It is normally reckoned to be at least three to five times as quick as assembler programming.

On the other hand, high-level languages make for less efficient use of the computer's speed and storage capacity.

Programs written in high-level language generally require 50%-300% greater storage capacity than those written in assembly language or machine code.

COSMOS COLLAPSE

Dear Sir,
A marvellous magazine, but I spotted several errors in your Sinclair Cosmos Landing program. For example there is no GOSUB 2000 referred to in line 8 and line 535 has a surplus GOTO in it.
Luckily these errors are easily sorted out but I thought you asked readers to check through games thoroughly before they sent them in?

David Wiel
Ripon
Yorks

Editor's reply: Lines 8, 535 and 570 all suffered from errors in the Cosmos Landing program. They should read:

```
8 IF INKEY $ "Y" THEN GOSUB 585
535 IF W 1 AND W 4 THEN PRINT D$
570 IF INKEY $ = " " THEN GOTO 570
```

Can I repeat requests that readers check their program listings through carefully before submitting them to prevent errors slipping through into the magazine.

REMEMBER THE REMS

Dear Sir,
I am writing to endorse the request of Mr B. A Moore in the December issue of your excellent (so far) magazine for rather more explanatory matter in the write up of the programs you publish or, alternatively, more "REMs" in the program listings themselves — these latter may always be edited out when entering the program in one's own machine.

I would also mention that it is not usually the Basic dialects which prove difficult — after all, if one sees "CLS" in a listing the meaning is rather obvious, even though it may not be contained in one's own version.

Also I would venture to bring to your notice the excellent *Basic Handbook* by David A Lien, the preface to which states that the handbook addresses the problem of Basic programs which after entering, will not run on one's own computer by; "discussing in detail every commonly used Basic Statement, Function, Operator and Command." In my opinion this claim is fully justified.

The real problem when transferring programs from one machine to another arises from the use of "Peek", "Poke" and "Call" commands.

I realise that the provision of both explanatory matter and "REMs" lies in the hands of your contributors and you cannot print what is not included in the submission to you, but it is so frustrating to see an interesting program which one cannot use because it is liberally spattered with "Peek" and "Poke" various numbers into various addresses that perhaps you could make a special appeal to everyone thinking of sending in a program for publication.

HUW KNOWS HIS WAY AROUND THE MACHINES

Instantly recognising the numerous creatures featured in arcade games is a daunting task even for the most addicted player.

But Huw Roberts of Maidenhead has got his finger on the pulse when it comes to creatures. Huw emerged the winner of our Know Your Creatures competition by correctly identifying eight of the nine creatures we asked you to name.

No-one managed to name all nine creatures correctly but our thanks and commiserations go to everybody who took part.

"At the moment I'm keen on playing Galaxians and Mooncresta but on average only spend about 20p a week in the arcades," said 18-year-old Huw.

"I worked out what the creatures were by playing the games myself and also spent a lot of time watching other people playing."

What he really likes about arcade games is converting them to run on his own computer, an Exidy Sorcerer, at his school's Research Machines 380Z. "I really like to watch other people play and try writing my own versions," he added.

He has been playing arcade games for about four or five years ever since the original bat and ball games were introduced. "Ever since Space Invaders came out I've kept reasonably well up on the new developments."

His top scores to date are 48,000 on Mooncresta and 17,000 on Galaxian. They bring out the aggressive streak in him. "I like the fact that you can kill things! But also because you can keep increasing your score and battering your own experience."

He's hoping his Taito Electronics Space Invader table will grace his parents' lounge when it is delivered.

Huw thought quite a few of the creatures we posed in the competition were obvious. But four of them caused him problems. Galaxian was the little beast that made him slip up, and he guessed at two of the creatures, the Wizard of Wor, and Space Fury.

Already with O level computing under his belt he has a place at Cambridge University to study computing at the end of this year.

MEET OUR TOP ARCADE

Asteroids expert Peter Edmonds, took on the best in the arcade world and came second last month.

Only world snooker champion Steve Davis could beat Peter's score on the deciding game of Qix. But by that time, Peter had already been heralded as Britain's top arcade player.

In conjunction with Taito Electronics, *Computer & Video Games* magazine organised the Best Arcade Player finals at the Embassy Club in London's West End. Nine finalists who could prove their top scores on Britain's three most popular machines travelled down from all over the country to compete for the title on January 26th.

But it was the finalist with the shortest journey, 18-year-old Peter from Whitton in Middlesex who came away with the prize, his favourite arcade machine, Asteroids, generously donated by Taito.

Steve Davis concentrating on Qix

Unemployed Peter plays mostly in his local Whitton pubs. "I like playing where there is an atmosphere. It's not beating the machine I like, but beating my mates."

Before the actual final Peter hadn't played Asteroids for a couple of weeks and he put his win down to the fact: "I was the only one not wearing a *Computer and Video Games* T-Shirt."

He usually plays arcade games a couple of hours a day and is now concentrating on perfecting his Defender technique.

After being beaten by Steve Davis in the specially arranged play-off between the champions, Peter admitted that he may not have put as much effort into that as he had the earlier rounds: "After all the competition proper was over then."

And Steve Davis was generous in his victory, confessing that he had played the new Qix machine "about 50 times" before this competition.

Steve is often seen relaxing between televised snooker competitons by playing arcade games, and his favourite one is Defender. "I use them just to mess about with during the sessions," he said.

"I find them very relaxing even though if you watch 90% of the players you'll see their feet twitching which can be very amusing.

"They are a form of competition but it doesn't really matter if you get blown up."

Steve found the Qix game an interesting and original concept: "It's certainly a different idea to most of them. But it's timing and co-ordination that is vital in all these games."

Steve put his victory down to the fact that he had just come in "fresh as a daisy", while Peter had been competing since the early morning.

Steve Davis presents champ Peter Edmonds with his rosette

E PLAYER

The Qix machine has already proved very popular in America and was launched in Britain at the Amusements Trade Exhibition on January 18.

It is a game of space capture with the player taking the part of a drawing line which can fill in areas of the screen. But every time he leaves the borders of the screen he has to be careful to avoid the Qix — a deadly moving spark which patrols the open space on the screen.

If 70% of the screen is filled a new screen is conjured up.

Play began early that morning with the nine finalists practising on their respective machines.

But the competition proper began with the 100s of entries we received from arcade game players from all over the country, who gave us their highest scores on their favourite machines. Asteroids and Defender were undoubtedly the most popular.

Pacman came a narrow third, just in front of Scramble and Moon Cresta, and the high scorers in these two brackets were very unlucky not to be included in the finals.

Because all the Defender and Asteroids finalists had already proved they can stay on the machine almost indefinitely and the Pacman finalists were capable of scoring over 300,000, it was decided to limit each player to 15 minutes on their chosen machine and the winner would be the one with the highest score after that time.

Peter was joined in the final proper by Christopher Jackson and Stephen Mainwaring. Taito expert Paul Moriarty showed the three how to play the Qix machine and gave them some tips.

Because it is difficult for even good players to stay on Qix for very long, each finalist was given five minutes' play and the best score after that period counted. Peter came out on top with 21,988 and after the nine finalists had been presented with their trophies by Steve Davis, Peter and Steve tangled in the final match of the morning.

Steve won the final battle with a score of 18,856 on the Qix machine.

THE NINE FINALISTS

The Embassy Club was alive with the sound of bleeping and buzzing machines and the sight of frantic fingers pushing buttons and pulling levers as the nine finalists battled it out.

Each contender had five minutes' practice play before they went through 15 minutes of tense, competitive play.

The winner from the three Asteroids contestants was Peter Edmonds who achieved a high score of 129,610. Runner-up was Vincent Mulholland of Buckhurst Hill, who plays in Tots 'n' Toys and scored 58,410, while Karl Booth a regular on the Gipton Hotel's machine in Leeds came third with 8,750 points.

The Defender champion was Christopher Jackson, a familiar face at Funland in Bridlington, who went through to the semi-finals with 104,000 points. He beat Richard Carr who scored 85,575 after hours of practice at the Scarborough Casino. David Ross from the Isle of Wight notched up 54,250. His arcade haunt is Southsea's Jubilee Clarence Parade.

Stephen Mainwaring of Swansea perfected his technique at Pompa's Café and reached the finals with the top Pacman score of 43,200. Runner up was the only girl to reach the final line up, Karla Stirzaker from Fleetwood, Lancs. She amassed 37,960 after qualifying at her local Church Army Youth Club.

Third in the Pacman contingent was Michael Cygan from Derby. Michael's final score was 28,730 after practising in Kathy's Arcade in his home town.

Taito Qix expert Paul Moriarty shows the finalists the rules of the game

TIONCOMPETITIONCOMP

OUR WINNERS DON'T HAVE LONG TO WAIT

Next month the three winners who managed to solve the free Octagon puzzle we put on the cover of the very first issue of *Computer and Video Games* will be announced.

When the closing date of the competition had crept upon us our office was swamped with entries and anxious telephone calls from entrants making sure the post hadn't delayed the arrival of their entries.

Getting on for 1,000 people submitted a solution to the "beer mat" puzzle hence the delay in choosing the three winners of the VIC-20 computers. These are now in the process of being sorted and tested, a mammoth task for those involved.

But by February 15 our judges will have found the three programs which met the criteria laid down.

Generally the standard of the programs submitted was good. They covered a variety of computers ranging from the Sinclair ZX81 at the micro end through to the DEC PDP/11 representing mini-computers, and up to a mainframe ICL computer.

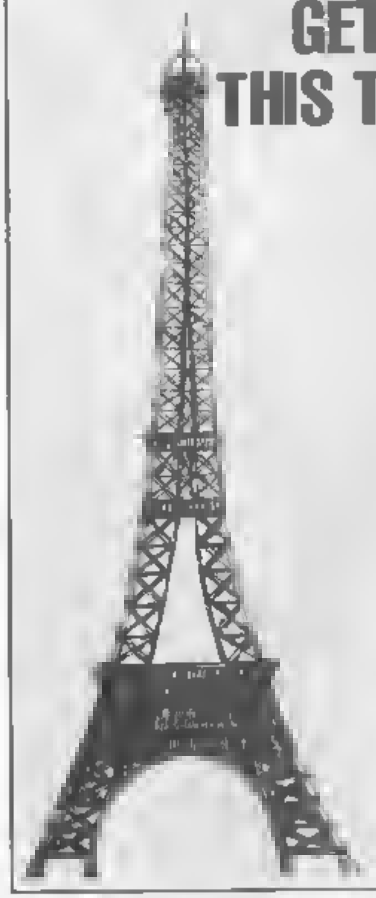
Sinclair owners were keen to upgrade their machine to a VIC-20 and accounted for the largest proportion of the entries.

Following a close joint second were solutions programmed for the Sharp MZ80K and the Tandy TRS-80 with the Acorn Atom the fourth most popular machine.

Many people obviously spent a lot of time and effort not only writing a program to match the sides of the puzzle, but also in presenting it. Some entrants included additional documentation with flow charts, instructions, diagrams and photographs.

The final decision rests on the quality itself, whether or not there are any bugs in it and the quality of the programming.

GET AN EYEFUL OF THIS TOWER—ON US!



The delights of Paris are waiting for you. That's the prize up for grabs if a program listing you send to us at Computer and Video Games is judged to be the best of the year.

Not only will you spend a weekend in Paris — and you can take a friend too — but we will also fill your pockets with money.

October is the month when our panel of judges will put their heads together to find the winning listing. Each listing submitted will be thoroughly played and tested by the judges taking into account the originality of the game, the use of the facilities offered by that particular computer, playability, presentation and skill in programming.

No matter what computer you have written the game for, or how old you are, you can enter the competition and stand the chance of being named best programmer. All entries are valid until October so you've still got seven months to knock out a games program good enough to put you on a plane to Paris.

BRAINWARE ANSWERS

The answer to our February Mind Routines is that 73, 74 and 75 are the lowest 3 consecutive integers whose factorials contain the digits 0-9 in ascending order. (73 factorial has 106 digits).

The correct solution to last month's Nevera Crossword is printed on the right and we will publish the names of the winners next month.

Turn to page 79 for this month's Brainware problems.

C		S				M				R		P

COMPUTER & VIDEO GAMES' free competitions are open to anyone except EMAP employees and their relatives.

Entries to our Mind Routines, Nevera Crossword, Know your Creatures, Game of the Year and Arcade Player of the World competitions, should be sent to COMPUTER & VIDEO GAMES, Durrant House, 8 Herbal Hill, London EC1R 5JB. Judges' decisions are final and no correspondence can be entered into.

Send entries to Mind Routines on a postcard and in all cases please include a name, address and, where possible, a telephone number.

Make the most of your Sinclair ZX Computer...

Sinclair ZX software on cassette.

£3.95 per cassette.

The unprecedented popularity of the ZX Series of Sinclair Personal Computers has generated a large volume of programs written by users.

Sinclair has undertaken to publish the most elegant of these on pre-recorded cassettes. Each program is carefully vetted for interest and quality, and then grouped with other programs to form a single-subject cassette.

Each cassette costs £3.95 (including VAT and p&p) and comes complete with full instructions.

Although primarily designed for the Sinclair ZX81, many of the cassettes are suitable for running on a Sinclair ZX80 – if fitted with a replacement 8K BASIC ROM.

Some of the more elaborate programs can be run only on a Sinclair ZX Personal Computer augmented by a 16K-byte add-on RAM pack.

This RAM pack and the replacement ROM are described below. And the description of each cassette makes it clear what hardware is required.

8K BASIC ROM

The 8K BASIC ROM used in the ZX81 is available to ZX80 owners as a drop-in replacement chip. With the exception of animated graphics, all the advanced features of the ZX81 are now available on a ZX80 – including the ability to run much of the Sinclair ZX Software.

The ROM chip comes with a new keyboard template, which can be overlaid on the existing keyboard in minutes, and a new operating manual.

16K-BYTE RAM pack

The 16K-byte RAM pack provides 16-times more memory in one complete module. Compatible with the ZX81 *and* the ZX80, it can be used for program storage or as a database.

The RAM pack simply plugs into the existing expansion port on the rear of a Sinclair ZX Personal Computer.

Cassette 1 – Games

For ZX81 (and ZX80 with 8K BASIC ROM)

ORBIT – your space craft's mission is to pick up a very valuable cargo that's in orbit around a star.

SNIPER – you're surrounded by 40 of the enemy. How quickly can you spot and shoot them when they appear?

METEORS – your starship is cruising through space when you meet a meteor storm. How long can you dodge the deadly danger?

LIFE – J. H. Conway's 'Game of Life' has achieved tremendous popularity in the computing world. Study the life, death and evolution patterns of cells.

WOLFPACK – your naval destroyer is on a submarine hunt. The depth charges are armed, but must be fired with precision.

GOLF – what's your handicap? It's a tricky course but you control the strength of your shots.

Cassette 2 – Junior Education: 7-11-year-olds

For ZX81 with 16K RAM pack

CRASH – simple addition – with the added attraction of a car crash if you get it wrong.

MULTIPLY – long multiplication with five levels of difficulty. If the answer's wrong – the solution is explained.

TRAIN – multiplication tests against the computer. The winner's train reaches the station first.

FRACTIONS – fractions explained at three levels of difficulty. A ten-question test completes the program.

ADDSUB – addition and subtraction with three levels of difficulty. Again, wrong answers are followed by an explanation.

DIVISION – with five levels of difficulty. Mistakes are explained graphically, and a running score is displayed.

SPELLING – up to 500 words over five levels of difficulty. You can even change the words yourself.

Cassette 3 – Business and Household

For ZX81 (and ZX80 with 8K BASIC ROM) with 16K RAM pack

TELEPHONE – set up your own computerised telephone directory and address book. Changes, additions and deletions of up to 50 entries are easy.

NOTE PAD – a powerful, easy-to-run system for storing and retrieving everyday information. Use it as a diary, a catalogue, a reminder system, or a directory.

BANK ACCOUNT – a sophisticated financial recording system with comprehensive documentation. Use it at home to keep track of 'where the money goes,' and at work for expenses, departmental budgets, etc.

Cassette 4 – Games

For ZX81 (and ZX80 with 8K BASIC ROM) and 16K RAM pack

LUNAR LANDING – bring the lunar module down from orbit to a soft landing. You control attitude and orbital direction – but watch the fuel gauge! The screen displays your flight status – digitally and graphically.

TWENTYONE – a dice version of Blackjack.

COMBAT – you're on a suicide space mission. You have only 12 missiles but the aliens have unlimited strength. Can you take 12 of them with you?

SUBSTRIKE – on patrol, your frigate detects a pack of 10 enemy subs. Can you depth-charge them before they torpedo you?

CODEBREAKER – the computer thinks of a 4-digit number which you have to guess in up to 10 tries. The logical approach is best!

MAYDAY – in answer to a distress call, you've narrowed down the search area to 343 cubic kilometers of deep space. Can you find the astronaut before his life-support system fails in 10 hours time?

Cassette 5 – Junior Education: 9-11-year-olds

For ZX81 (and ZX80 with 8K BASIC ROM)

MATHS – tests arithmetic with three levels of difficulty, and gives your score out of 10.

BALANCE – tests understanding of levers/fulcrum theory with a series of graphic examples.

VOLUMES – 'yes' or 'no' answers from the computer to a series of cube volume calculations.

AVERAGES – what's the average height of your class? The average shoe size of your family? The average pocket money of your friends? The computer plots a bar chart, and distinguishes MEAN from MEDIAN.

BASES – convert from decimal (base 10) to other bases of your choice in the range 2 to 9.

TEMP – Volumes, temperatures – and their combinations.

How to order

Simply use the order form below, and either enclose a cheque or give us the number of your Access, Barclaycard or Trustcard account. Please allow 28 days for delivery. 14-day money-back option.

Sinclair ZX81 Personal Comp the heart of a system that grows with you.

1980 saw a genuine breakthrough – the Sinclair ZX80, world's first complete personal computer for under £100. Not surprisingly, over 50,000 were sold.

In March 1981, the Sinclair lead increased dramatically. For just £69.95 the Sinclair ZX81 offers even more advanced facilities at an even lower price. Initially, even we were surprised by the demand – over 50,000 in the first 3 months!

Today, the Sinclair ZX81 is the heart of a computer system. You can add 16-times more memory with the ZX RAM pack. The ZX Printer offers an unbeatable combination of performance and price. And the ZX Software library is growing every day

Lower price: higher capability
With the ZX81, it's still very simple to teach yourself computing, but the ZX81 packs even greater working capability than the ZX80.

It uses the same micro-processor, but incorporates a new, more powerful 8K BASIC ROM – the 'trained intelligence' of the computer. This chip works in decimals, handles logs and trig, allows you to plot graphs, and builds up animated displays.

And the ZX81 incorporates other operation refinements – the facility to load and save named programs on cassette, for example, and to drive the new ZX Printer.

New BASIC manual

Every ZX81 comes with a comprehensive, specially-written manual – a complete course in BASIC programming, from first principles to complex programs.

Kit: £49.95

Higher specification, lower price – how's it done?
Quite simply, by design. The ZX80 reduced the chips in a working computer from 40 or so, to 21. The ZX81 reduces the 21 to 4!

The secret lies in a totally new master chip. Designed by Sinclair and custom-built in Britain, this unique chip replaces 18 chips from the ZX80!

New, improved specification
- Z80A micro-processor – new faster version of the famous Z80 chip, widely recognised as the best ever made.
- Unique 'one-touch' key word entry: the ZX81 eliminates a great deal of tiresome typing. Key words (RUN, LIST, PRINT, etc.) have their own single-key entry.
- Unique syntax-check and report codes identify programming errors immediately
- Full range of mathematical and scientific functions accurate to eight decimal places.
- Graph-drawing and animated-display facilities
- Multi-dimensional string and numerical arrays.
- Up to 26 FOR/NEXT loops
- Randomise function – useful for games as well as serious applications.
- Cassette LOAD and SAVE with named programs.
- 1K-byte RAM expandable to 16K bytes with Sinclair RAM pack.
- Able to drive the new Sinclair printer.
- Advanced 4-chip design: micro-processor, ROM, RAM, plus master chip – unique, custom-built chip replacing 18 ZX80 chips

Built: £69.95

Kit or built – it's up to you!
You'll be surprised how easy the ZX81 kit is to build: just four chips to assemble (plus, of course the other discrete components) – a few hours' work with a fine-tipped soldering iron. And you may already have a suitable mains adaptor – 600 mA at 9 V DC nominal unregulated (supplied with built version).

Kit and built versions come complete with all leads to connect to your TV (colour or black and white) and cassette recorder

puter-

Available now- the ZX Printer for only £49.95

Designed exclusively for use with the ZX81 (and ZX80 with 8K BASIC ROM), the printer offers full alpha-numerics *and* highly sophisticated graphics.

A special feature is COPY, which prints out exactly whet is on the whole TV screen without the need for further intructions

At last you can have e hard copy of your program listings - particularly useful when writing or editing programs.

And of course you can print out your results tor permenent records or sending to a fnend

Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your computer - using a stackable connector so you *can* plug in a RAM pack as wall. A roll of paper (65 ft long x 4 in wide) Is supplied, along with full Instructions

16K-byte RAM pack for massive add-on memory.

Designed as a complete module to fit your Sincleir ZX80 or ZX81, the RAM pack simply plugs into the existing expansion port et the rear of the computer to multiply your data/program storage by 16!

Use it for long and complex programs or as a personel database. Yet it costs as little as half the price of competitive additional memory.

With the RAM peck, you can also run some of the more sophistr-cated ZX Software - the Business & Household management systems for exempla

How to order your ZX81

BY PHONE - Access, Berclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours e day, every day

BY FREEPOST - use the no-stamp-needed coupon below. You can pay by cheque, postal order, Access, Barclaycard or Trustcard.

EITHER WAY - please allow up to 28 days for delivery. And there's a 14-day money-back option. We want you to be satisfied beyond doubt - and we have no doubt that you will be.

TUMBLEWEED AND THE MORGS

TOMBSTONE CITY

There's a far-off planet with a desert atmosphere where plants procreate and turn into vicious creatures which devour any out world visitors

You are stuck in that desert, in command of a schooner which is equipped with laser guns capable of widespread obliteration A protective field is your only safeguard

Two types of evil creature inhabit Tombstone City The Pink Tumbleweed and the green coloured Morg.

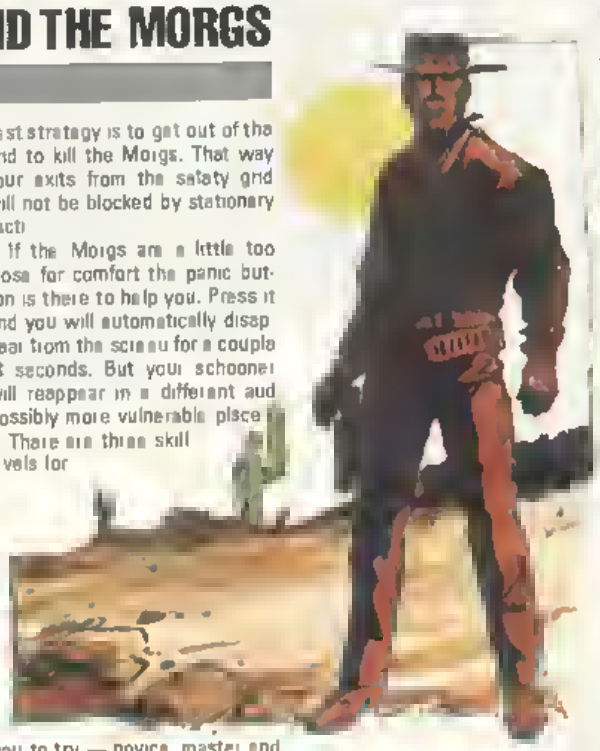
Scattered around the infertile sands are Cacti and even they are harmful When the top of the plant turns white it is a warning that it is on the verge of changing into a Morg.

The Morgs move around the perimeter of your safety grid, represented by blue coloured squares Between each square is a path which you can travel along, or aim your guns between to blast a green Morg

When you fire your guns at a Morg and score a direct hit they instantly transform into cactus plants It's a vicious circle The best strategy is to get out of the grid to kill the Morgs. That way your exits from the safety grid will not be blocked by stationary cacti

If the Morgs are a little too close for comfort the panic button is there to help you. Press it and you will automatically disappear from the screen for a couple of seconds. But your schooner will reappear in a different and possibly more vulnerable place

There are three skill levels for you to try — novice, master and insane The game is difficult, but that in itself makes it compulsive and you will want to keep playing until you have mastered the strategy



Texas Instruments is the brain behind this new game which has been developed to run on a TI. 99/4A Cartridges should retail at around £20

BATTLE FOR THE SUEZ CANAL

SOUTHERN COMMAND

Put yourself under pressure taking charge of an Israeli commando unit during the October war of 1973.

As an Israeli commander you must smash enemy camps and cross the Suez Canal to establish a bridgehead for your side

Your country's airforce is at your disposal too to put down Egyptian resistance

This new wargame is called Southern Command running on an Apple II with 48K

With the game comes a comprehensive instruction book detailing how to play the game, which keys to use and giving hints for the best strategic plans to take. The book also contains various historical scenes which you can re-enact on the computer. It's essential to read the book thoroughly to get the best out of the game, and at £24 95 it's worth spending time doing so.

Richmond based SBD Software is the U K supplier

LIFE, DON'T TALK TO ME ABOUT LIFE...

LOVE AND DEATH

Completes an entire life cycle from conception to death in this amusing adult game with the apt name Love and Death

ZX81 1K owners should get to grips with this game for a few entertaining hours in which you travel through every stage of life. To bring an extra smile to your face listen to the cassette playing an amusing soundtrack which adds flavour to the game.

It begins with the Seduction, the first game and you can guess what it's about! By suggesting "doing verbs" to the computer corresponding to various parts of the anatomy pictured on the screen, the seduction of a woman takes place

Next you will see yourself as a father figure and want to bring your own son into the world — no easy task this — but if all goes well you can move on to the next game, Birth.

If you can manage to bring a child into the world unaided the game is really on Your offspring has already been named for you — Rubic's Puba It's up to you to make sure he grows into a fine specimen of a man by building up the chromosomes in his body

Sadly Rubic's life isn't all a bed of roses He has to take his place in the working world. In On the Job he goes out to work and has to battle with good and evil

Alas, he has already begun his descent down the slippery slope of life As middle age strikes so does Dr Death. You have to battle for his life against a deadly disease similar to the Black Death

Even in death there is no dignity, for God and the devil fight over your soul in this two player game A bunch of devils advocates creep onto the screen and confront angels working for God

Automata is the firm behind this game and it warns buyers that Love and Death is purely intended to entertain and not to offend the sensitive.

It can be yours for £5

BATTLE OF THE PLANETS

AIRSTRIKE

Inter planet fendel warfare ie rag ing end as chief in command of the galactic spece cruiser force you direct all craft in a bid to fend off enemy beings

But the territory in which you and your space fleet ere fighting is uncharted You ere flying blind

Your only eid is your radar on which the horizon unfolds sec onds before you fly over the terrain.

Missiles ere fired at you from ell sides. On the ground are beses which you must destroy — it you don't there's e chance they will shoot you down Enemy craft litter the sky, constantly blasting your ship with lethal laser fire

Fortunately your unique spece cruiser has ample emmunition facilitias You cen open your holds to drop bombs on craft flying below you or on gronnd stations Or you can make use of your laser guns fitted to the front end back of yonr vessel

The horizon is not straightfor ward. There are monntains which appear snddenly in tront of you, and which occesionelly develop into nerrow tunnels thiough which you mnst navigate your ship.

Airstrike has been developed for the Atari 400 and requires 16K memory capacity. It comes in erther cassette or disc form. Gemini Electronics is the supplier and the price ie £15 95 tor tape and £18 95 for disc

IN LUKE'S KINGDOM

STAR WARS

In the movie **Ster Wars**, Luke Skywalker's lite wes one long conflict with the Empire's hoary voiced leader Derth Veder

In this new **Star Wers** adven ture — which rune on e Nescom 2 with 32K memory — yon assume the role of Luke and kick the game off by creeting e 100 quedrant gelexy which contains 72,000 cells end e multitude of sters

Once the various robots, star ships and planets have been ran domly placed in the galaxy by the computer, the battle begins.

Your object is to locate end destroy the Empire's giant head quarters — the Death Star

But before you ettempt that you have to rescue the Princess Leie from the clutchee of cruel Darth Vadar

Dn yonr way there is plenty ot action. From space battles with Empire forces, collecting R2D2, the astro-droid and C3PD, the well spoken humanoid robot, to rescuing Princess Leie and killing Derth Vadar for the good ot men kind

To help you in your space quest yon have some of the most advenced equipment on yonr ship providing you with informe tion about your current situation and giving you help and guidance on your mission

At your disposal ere e variety of sophisticated weapons includ ing e turbo lesei cannon, twist beams and leser pulses, plns force fields and energy absorbing shields tor youi ship's protection

If you snceeed in completing each mission given yon get the chance to fly your X wing stei fighter down the Death Ster's Trench But it is e risky and dengerone tesk end one, suitable only foi expert starfighter pilots.

While under heevy bomberd ment from enemy fire yon have to nevigate your X-wing down the Trench and eim foi the week spots

Absolute accuracy is vital to your success end you must judge the exact moment to release e Photon bomb to wipe out the Death Star.

Star Wars is e product of Chelmsford based Future Soft ware meking use of reel time graphics and machine code prog ramming tor extra fast ection, end it costs £10

RUBBISH FROM SPACE

SPACE DEBRIS

Space Debris is almost the reverse of Space Invaders The green meanies remain in benks at the top of the screen end you are forced to move your firing ship upwards, instead of the aliens gradually moving down towards you

What forces yonr firing base to fly into the meanies' close range is the debris If you let one of tha little devils escape yonr leser fire, when it hits the ground you'll find it transforms into e piece of debns You must shoot them down before they build up into too much rubbish, blocking your flight peth If you get e direct hit you score points

Space Debris was written for e Pet computer by sottwere specialists Supersoft of Herrow The price ie £8 plus VAT

MARAUDING INVADERS

RED ALERT

Your civilisation is et red alert under threat from e race ot merauding invaders intent on destroying all yonr plenet's defence sites

It's literally Red Alert as you leap to ection stations to save yonr people Amongst your weapons ere two multi barrelled precision cambered meanie bles ters, ona ultre sensitive wide renga multi frequency reder, one government surplus enti-thnd rocket,

The meanies fill the night sky, constantly finng missiles et the surface ot your planet Move your reder sights close to the merauders end press the space ber to zap them into oblivion

If the creatnies blow up your two meenie blesters you lose the game The best stietegy is to protect your radai from destruc tion to achieve a high score.

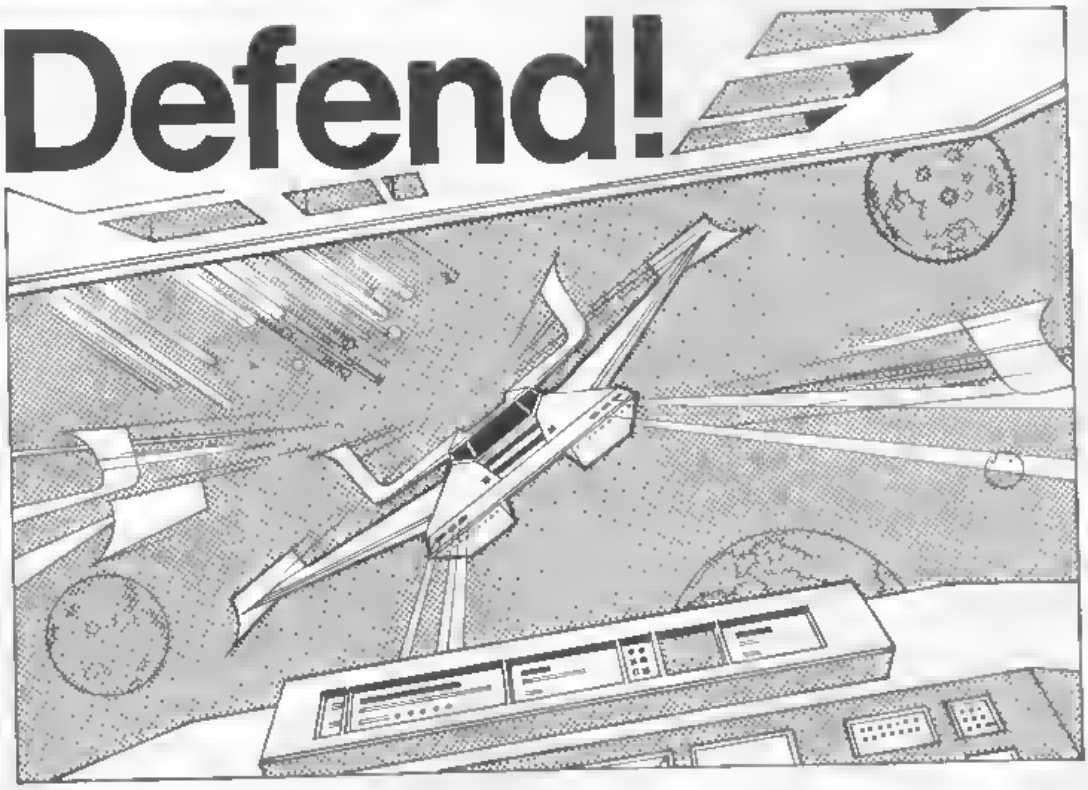
Red Alert runs on Apple II computers and reqnires 48K memory space Copies can be bought from SBD Software of Richmond for £16 95.

INNOVATIVE

TRS 80-GENIE SOFTWARE

from the professionals

Defend!



First there was Invaders, then came Asteroids, and now DEFEND!!!

Carrying on in the same tradition, Defend is a fast arcade type action game, complete with sound effects. Enemy spaceships come at you fast and furiously. If you succeed in shooting them down before they get your ships, you must still get yourself through a meteor shower (but at least they don't shoot at you) and finally, if you emerge unscathed, you must navigate a tunnel in order to get yourself completely out of danger. An enthralling game with excellent graphics, personalisation of highest scores and points bonuses. One of its best features is the "crisp" and immediate control the player has over the manoeuvreability of his ship which includes diagonal movement. Machine language, of course, for speed. A matter of taste, but we think it beats Invaders and Asteroids. Suitable for TRS-80 Models I and III and all Genie models.

Tape (16K) £13.00 + V.A.T. = £14.95

Disk . £16.00 + V.A.T. = £18.40

GAMES NEWS

TAKE ON THE TANKS

TANK RAID

The lives of your tank battalion are in your hands as they take on enemy forces.

Somewhere in the battlezone a bomb is set to go off. You must destroy it before time runs out.

Sixteen waves of enemy tanks roll before you, and you must defeat each one in turn. After you have defeated one wave you move on to the next and the location changes as if you are taking part in a live battle.

You must complete your mission within a set time limit. As you progress through the game more enemy tanks set upon you. Be careful to aim your missiles accurately because your firepower is limited. If you destroy a tank you receive bonus missiles to bolster your supply.

With 70 tanks for you to wipe out your task is not easy, especially as there is cover for them to hide behind and wait until you are in firing range.

To make your life more hazardous some tanks in the opposition force are indestructable, some are not. And you never know which is which.

Tank Raid runs on the Microtan 65 and if you fancy taking up the challenge of the tanks you can buy a copy from the Tangerine User Group for just under £10. Remember, it needs 16K memory to run.

HAUNTING EXPERIENCE

GHOST HUNT

Hunting ghosts along the corridors of a mansion on Huckleberry Hill is a daunting task.

They multiply without warning and suddenly appear from behind walls. Every few seconds they change roles and start off in frantic pursuit of your hunter.

In essence Ghost Hunter is a version of the arcade game Pacman. But this is the first version available for the Atari 400 and 800 personal computers. It has been specially imported from America by Manchester and London based Gemini Electronics.

The screen fills with a maze in the centre of which is a square forming the central meeting place of the ghosts. Covering the path of the maze is a line of dots which your hunter has to eat to earn points.

Four energy posts are in the corners of the maze, when you eat that in your trail hunt for the ghosts you automatically become the hunted instead of the hunter.

Altogether there are 5f variations of the game and it can be played by either one or two players, each moving a hunter about the maze gobbling up dots and ghosts.

With f6 different floor plans (maze patterns) there is plenty of scope to stop boredom creeping in. If you want to be surprised you can let the computer choose a floor plan for you.

A couple of special features have been written into the game to add excitement. By amassing points you get a bonus hunter to help you take on the ghosts. You'll need it because as the game progresses more and more ghosts haunt the maze.

The "Ride Instantly" facility speaks for itself. At the press of a button you can make your hunter disappear momentarily.

It's available now from Gemini on disc or cassette for 16K Atari computers. Cassette costs £16.95 and the disc version is £18.95, with an extra 50p for postage and packing.

HELP SAVE THE DWARF!

SIX KEYS OF TANGRIN

Here's two adventure games for Tangerine systems, both with oriental sounding names.

They are Tenlan Adventure and the Six Keys of Tangrin from the Tangerine User Group (TUG). Running on the Microtan 65 you will need a maximum of f6K memory space to get the games going.

The central figure in Tenlan Adventure isn't a Chinaman, but a dwarf. He has committed a crime so heinous that it is cloaked in secrecy. Only the authorities know the full details.

It is for that crime that he has been locked up in a jail which makes Colditz seem like an open prison.

You become his accomplice and your task is to get him out of jail. The game follows the traditional principles of adventure. You tell the computer what to do and where to go by keying in command instructions for direction and movement.

As you go you must pick up objects which could come in handy for the dwarf's escape, and avoid the police guards patrolling the jail.

The Six Keys of Tangrin is a different story. They are hidden throughout a series of deep caverns. By trial and error you must use your cunning and intuition to locate each of the keys.

It's not an easy job, as each one is inside a locked box. When you've found the box your next task is to open it. You win the game when you have managed to find all six keys.

The Six Keys is written in Basic and you only need a machine with an 8K-memory.

Tenlan Adventure needs 16K memory and is machine code written. Both can be bought from TUG, and both cost £5.95.

"Give me one good reason why I should choose a VIC 20 home computer."

1. VIC is outstanding value for money. No other colour home computer can give so much for under £200.

2. Total standard memory 25K made up of 20K ROM and 5K RAM.

3. Fully expandable to 32K of user RAM.

4. Microsoft Basic interpreter as standard.

5. Accessible machine language as standard.

6. Connects direct to monitor or standard television.

7. Full size typewriter-style keyboard.

8. Full colour and sound.

9. All colours directly controllable from the keyboard.

10. 62 predefined graphic characters direct from the keyboard.

11. Full set of upper and lower case characters.

12. 512 displayable characters direct from the keyboard.

13. High resolution graphics capability built into the machine.

14. Programmable function keys.

15. Automatic repeat on cursor function keys.

16. User-definable input/output port.

17. Machine bus port for memory expansion and ROM software.

18. Standard interfaces for hardware peripherals.

19. VIC 20 is truly expandable into a highly sophisticated computer system. The comprehensive list of accessories includes the following:

- Cassette tape unit.
- Single drive 5¼" floppy disk unit (170 K bytes capacity).
- 80-column dot matrix printer.
- 3K, 8K and 16K RAM expansion cartridges.
- Programming aid packs, including a high resolution graphics cartridge, a machine code monitor cartridge and a programmers' aid cartridge.
- Memory expansion board.
- Plug-in conversion box for a full 32K, 40-column x 25 lines VIC including Prestel compatability.
- Prestel/Tantel interface package.
- RS 232C communication cartridge.
- IEEE/488 interface cartridge.
- Joysticks, light pens, paddles and motor controllers.

20. Full range of software for home, education, business and entertainment on disk, cassette and cartridge.

21. Books, manuals and learning aids from Teach Yourself Basic to the VIC programmers' reference guide (a must for advanced programmers).

22. Full support for VIC owners – their own magazine 'VIC Computing' as well as a national network of VIC user groups.

23. National dealer network providing full service and support to VIC owners.

24. Expertise and experience – Commodore are world leaders in microcomputer and silicon chip technology.

25. Commodore is the leading supplier of micro-computers in the UK to business, schools, industry and the home.

26. VIC 20 is the best-selling colour home computer in the UK.

How many reasons was it you wanted?

ARCADE ACTION

KEEP ON DOCKING

TIPS * MOON CRESTA * TIPS

The whirling aliens of Moon Cresta have captivated many an arcade player and also produced some of the more colourful slang arcade expressions

The game begins with a small craft at the bottom of the screen and the aliens swirling above it These split up on being hit and the safest way to approach this first encounter is to blow up both halves of each alien before tackling the next one

After two screens of these, the Super Flies appear — these move up the screen and to the right. These are best despatched by shooting from the middle of the screen, moving right and finally tackling the ones on the lefthand side.

After the second set of Super Flies, move into the centre of the screen ready for docking Try not to use the thrust at all during docking as this wastes points

If it becomes obvious that you will not dock successfully, use the thrust to move to the side, rather than salvage a bad docking This way you don't earn a docking bonus but at least you won't lose a life A successful docking results in more fire power

The next life form (with the unlikely name, 4-D's) are quite unpredictable and must be dealt with as best you can But make sure that after the second set your craft is on the righthand side so you don't get hit straight away by the Meteorites which follow them

These come down in eight pairs and beginners make the mistake of shooting one and hiding from the other The way to a good points score is to hit them both

Finally and most dangerous are the Atomic Piles which get harder after each sequence

The second time around two of these fall down in the lefthand side straight away By the sixth time around the only safe spot is in the far righthand corner Next time the only hope is to blast a hole for yourself

STREET TALK

Among the descriptive expressions which Moon Cresta fans have formed for their game is Christmas Tree

This is a slang term for all three stages docked on together to resemble a fir tree

A Double Disaster is the phrase to describe the fluffing your docking at the first and second stages

The third stage is popularly known as Fat Val (especially in the Sheffield region!) because of its size and shape

The meteorites are popularly known as "Fluffy Balls"

CROSSING THE BORDER

CUE BALL

The Video Pool which featured in our Arcade Action spot last month has several rivals out at the moment.

There are two ways of playing the game by lining up the crossas on the balls (as described in Video Pool in the January issue) or by lining up the cross behind the ball on a cushion

Cue Ball has such a method. In this game the player has just six balls to play with and runs the cross right or left along the cushion When the cross is lined up behind the ball of your choice press the fire button and hope your eye is good enough

If you do not fire within the time limit the cue ball will shoot off at whichever angle the cross is then at

The balls do not have to be knocked down in sequence (1 to 6) but experienced players can improve their score by potting the balls in the hole with that number over it.

It is a game for people who can accurately judge an angle and takes a lot of getting used to.

If all six balls are downed another six are set up for the break But take care to look at the angle the cue ball will rebound at, as it is important to keep that on the table

The disadvantage of this game is that the cue ball always shoots off at the same velocity and a bad deflection could lose you the ball.

THE GAME NOW STANDING AT . . .

GUTTANG GOTTONG

Although the era when all children wanted to be engine drivers is behind us, railways still attract many enthusiasts

And the spotters, model railway builders and steam railway buffs have been catered for by the arcade industry with a game called Guttang Gottong (I think it loses something in the translation from Japanese)

The screen is divided into a series of squares, each with some features of the railways, like track crossovers, points, buffers or just plain lines The edge of the screen is made up with stations — three on every side

The aim of the game is survival, keep your train running and notch up points by going to the stations with a bonus score flashing up on them.

All this requires some careful track manoeuvring to achieve and the player has control of a black block which he moves around to change the layout of the tracks

Bonuses can also be achieved by going over the four track crossovers but the danger here is that you have no control over which track your train will take and if a dead-end is lurking close by !

The train's course is plotted by a change of colour and this helps in seeing where the next dead end lies in wait for your locomotive.

Other hazards are crazy trains which materialise if a player takes too long reaching a station showing a bonus These travel around the track and hope to crash into your train A good player will arrange the railway lines so that crazy trains crash into each other but this will create a no-go area on the lines

The accelerate button will speed your train through a likely crisis point or to the next bonus station

One way to seemingly avoid trouble is to make a loop which includes a couple of stations and wait for the bonus to crop up there But this possibility had been foreseen by the game writers and a loop sweeper will appear on the line to prevent an overlong stay on a feature of this kind

SHOWING A LONG LEG

SNAP JACK

Dangers abound in the imaginative game of Snap Jack which features a very mobile moon-buggy

The craft in question moves backwards and forwards, fast or slow and also up and down on extendable legs at a push of the control lever

The craft feeds on mysterious globules which hang in strings in the atmosphere which it reaches up to consume

It has some of the elements of Pacman and Scramble in the game which sees the car running from all manner of weird dangers, using its expandable legs to good effect.

The main danger in this surreal world are the Medusa Jacks. These are airborne craft which swirl through the atmosphere and destroy the player's craft if they come in contact with it.

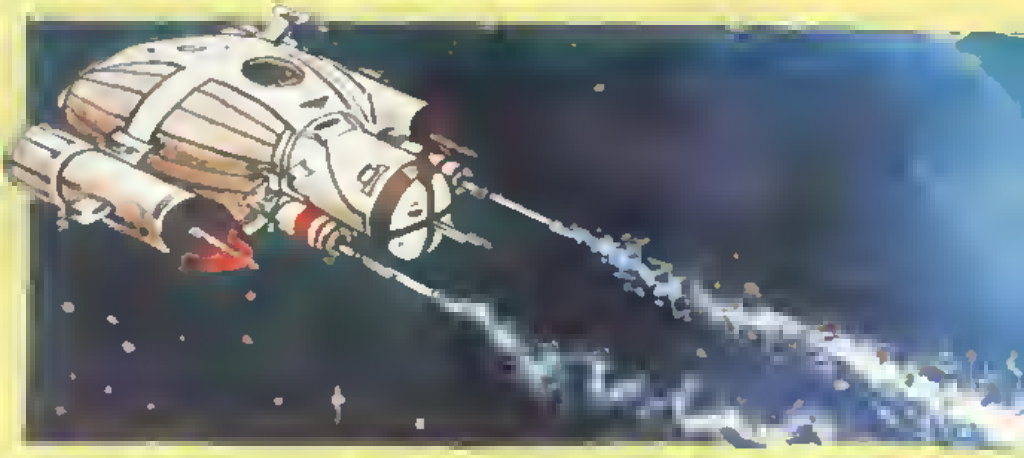
Other threats come in the form of cable cars which soar across the top of the screen and bouncing barrels, both of which cause instant death at a touch

The player can turn the tables on the Medusa Jacks though, by eating a flashing dot which then enables him to chase after them and eat them up in the way of bonus points

The difficulty of the game is increased by the extremely uneven terrain which the craft must travel over. And after a while the craft enters a subterranean cavern, where the cavern ceiling bulges just as dangerously as the floor. This makes things hard for the Medusa Jacks as well and the floor is soon littered with these creatures which have flown into the ceiling

Large gaping fishes lie in wait for our intrepid craft here but it is after this section that the game really takes off, when a sleeping dragon lies in wait, ready to pursue the craft.

Marvellous graphics and the machine I played gave six lives, which was just as well — I needed all of them to reach the dragon



IN THE CORRIDORS OF SPACE

TEMPEST

Tempest blows up a storm of ever-changing action for the arcade player

There is no attempt to spin an Earth saving theme around the game of Tempest — it relies on brightly coloured graphics, spectacular sound effects and a fast, frenetic affray with 28 skill level possibilities

The player starts the game by selecting a "Hole" to play his first challenge on. Five possible Hole patterns are available.

These represent a three dimensional display radiating out in channels from a starry background (see photograph of screen below)

From this centre the evil creatures radiate out towards the edge, along which the player moves. The player takes the form of a claw-like blaster which encompasses the end of whichever channel he has moved to

From this vantage point he can rain down missiles to destroy the burgeoning life which is rushing upwards

Among the "nasties" there are Flippers strikely creatures which run around the edge of the Hole upon reaching it, Fuseballs, zip up and down the corridors, Pulsars lightning like monsters which appear at level 17. All of these also appear in "Tanker" form — which split into two of whichever creature on being hit. Spikers, leave deadly green spikes around the corridors, which can impale the player at the end of a Hole's life

At the end of a "playfield" (as soon as all the creatures are killed) a new more difficult design appears on the screen with fiercer inhabitants

The player's blaster is not helpless when a creature makes it to the edge as it can turn to fire along the edge as the monster approaches

Among the many Hole designs are circles, heart-shapes, ovals, a selection of crosses and "V"s

The player's controls include a knob which rotates his blaster, a fire button and a zapper which can only be used twice. First time it eliminates all life, on the second occasion it kills off just one creature

Three lives are available at the start but bonus blasters are earned for high scores

THE NEXT STEP?

Atari's Tempest has got around the problem of making expert players run through the early stages of games which will be far too easy for them

Once a player has reached one of the 28 skill level possibilities, he can start the game at the same level without going through the beginning levels again

The company calls this feature Skill Step and rewards the good players who attempt a high level start with bigger scoring opportunities.

This feature may soon catch on across the arcade game scene

STAR TREK

RUNS ON A TANDY TRS-80 IN 24K

BY LANCE MICKLUS

Message from Star Fleet H.Q. Star Data 2000.

Orders for Captain James T. Kirk, Starship Enterprise.

1) Collect data on Sector Omega VI. Sector is divided into 192 quadrants for exploratory purposes (8x8x3 quadrants).

2) Preliminary reports indicate 5 Class M planets in the sector. Locate, orbit and gather data on each of them.

3) Intelligence reports 20 Klingon warships in sector. You are to locate and destroy them.

4) You are to complete your mission and report to Starbase in Quadrant 7,7,2 by Star Date 2500.

Star Fleet Command

8	7	6

void K0O1S1P1 K090B1P1	void void K0O0S2P2	Unknown Quad Unknown Quad Unknown Quad	0 1 8 2
void void void	void K0B1B2P1 Star Fleet HQ	Unknown Quad Unknown Quad Unknown Quad	0 1 7 2

LONG RANGE SENSOR SCAN QUADRANT 7 8 1
Hit (ENTER) to continue

The sample display, above, shows what a typical Long Range Sensor scan might look like. It was taken when the ship was located at quadrant 7,8,1 which is the quadrant in the middle of the display. There's a Klingon, one star and one planet in quadrant 8,8,1. Do you see the starbase in quadrant 8,8,1? If you do, good. That means you know how to interpret the Long Range Sensor Scan. The right-most column is all "Unknown Quadrant" because they are not in the galaxy. In other words, they don't exist.

TREK III-4

First, you must never forget the Prime Directive: You should not shoot at anything except Klingons, otherwise you will go to jail.

Also, you must be careful manoeuvring your ship. If you collide with a star-base they will complain to Star Fleet Command. This will result in a loss of points, making it impossible to get a perfect score.

If you want to play to game to lose, try flying into a quadrant where there is a black hole or a close O star. The ship will be destroyed immediately and the game terminated. Another effective method is to ignore your crew and ship's reports, and just keep flying until you run out of energy.

The only honourable way to die is to be destroyed in a Klingon battle.

In this simulation of the Starship Enterprise you will work with two computers — the ship's computer and the science computer. Their function, and that of the long range sensors, is of prime importance to the game.

To achieve your first objective, your ship's computer must have information about the number of Klingons, starbases, stars and planets in each quadrant of the galaxy. More detailed information is not necessary to achieve object number one, but may be helpful to you.

Each time you operate your long range sensors, the data displayed on the screen is also transferred and stored in the ship's computer.

The ship's computer can also provide you with information. It can scan its data bank to locate any area of the galaxy for which it does not have any basic data.

When Klingon vessels are encountered it's time to use the Phasers or the Photon torpedoes. Phasers aim themselves, but sometimes they miss. Also, Phasers use up energy from those big 4,000 gallon gas tanks.

The destructive power of the Phasers decreases with distance. On the other hand, Photon torpedoes destroy anything they hit, and they use no power, but you must aim them.

The Klingons shoot back. That's why you go to RED alert and get those deflector shields up. At least if they do hit you, the damage is minimized.

You will be notified of any damage to the ship by Damage Control. That is unless they are themselves damaged. If you want the full report, use the Damage Control command. You can also use a turn to speed repairs to the ship by using the Repair command.

After you've destroyed all of the Klingons, you will want to go back to condition GREEN. That way your deflector shields will be at a minimum power to save energy.

You might have noticed that there is an alert condition which is YELLOW. This is a standby battle ready condition that brings the shield power up part way to offer some protection from Klingon fire power, and yet still conserves energy. Why ever use condition YELLOW? Because quadrants near the Pulsar show up as noise on the LONG RANGE SENSOR scan.

Whenever you are on YELLOW alert or RED alert, you get a status report automatically each turn.

The science computer is the counterpart of the long range sensors. It provides both you and the ship's computer with detailed information about the quadrant. This includes the classification of stars and planets, and the location and energy level of Klingons.

Since long range sensors only scan the immediate adjacent quadrants, you're going to have to move the ship. This is the function of the Warp Drive. This command lets you move from one quadrant to another, and automatically navigates around things like stars and black holes. You must provide the destination quadrant and the speed in warp units. The faster you go, the more energy you use. The slower you go, the more time (stardates) your trip will take.

You can think of the Enterprise as having a 4,000 gallon gas tank. By using the Status command, you can find out how much fuel

STAR TREK

you have left. You must keep your eye on this, lest you run out of fuel. To get more gas, or fuel, you must dock at a starbase.

To do this, you must first find a starbase by using your long range sensors the ship's computer or a combination of both. But, don't try to dock at the starbase in quadrant 7,7,2 or you'll end the game — probably in disgrace. Use your Warp Drive to fly to the quadrant where the starbase is located.

Now you must manoeuvre the ship within the quadrant. This is the function of the Impulse Engines. You must supply the direction and speed. Use the compass below to give the direction. A unit of speed is approximately equal to one space. To dock, you must try to move the Enterprise into the same space that the starbase occupies. But don't try to move through it, or a collision will result. When that happens, other things will go wrong for you and a perfect score will no longer be possible.

After a successful docking, good things will happen. For one, you'll get a full fuel supply. Also, your stock of torpedoes will be set back to three, and most damage to the ship repaired.

But let's say you have plenty of fuel and your long range sensors turn up a quadrant with a planet. go to that quadrant using your warp drive. Now use the science computer to classify the planet(s). If it is an unexplored class M, then you will want to explore it. To do this, simply orbit the planet the same way you would dock to a starbase. Once orbit is achieved, the planet will be classified as an explored Class M planet and points scored. When you have orbited all five class M planets, objective number two will have been achieved.

You are now ready for objective number three, called "Kill the Klingons". First you've got to find them. If you've been doing much exploring, that won't be hard. They'll show up on the long range sensor scans. You must now get ready for battle.

First, you must put the deflector shields up to full power. Use the Alert Command and go to condition RED. Next, use the Warp Drive to enter the quadrant where the Klingons are.

A Pulsar is a giant static maker. The static is so strong near the Pulsar that the Long Range Sensors can not detect what is in the quadrant. Therefore, you must go to the quadrant using your Warp Drive to see if anything is there.

Don't be surprised if you suddenly find some Klingons. They know you can't see them from any distance so, they like to lurk in the Pulsar noise, ready for a surprise attack.

Some players like to explore the noise quadrants in condition YELLOW to conserve energy and yet be ready for a surprise attack. Others prefer to explore these areas in condition RED.

One other thing you will find in the galaxy is a void. That's what the Long Range Sensors will display when they scan a quadrant which has nothing in it. Otherwise, it will display the number of Klingons (K), Starbases (B), Stars (S) and Planets (P).

Now I'm going to let you in on a little secret. If you should return to Basic, and want to continue, you can get back to the command level by typing GOTO 1 (ENTER). This is only to be used if, for some reason, the program should stop unexpectedly. It gives you a way to restart the game. Except for such an emergency, it should not be used.

Because it can take up to two hours to play an entire game, a save-game load-game feature has been added. When you are at the command level, type 1. The program will ask whether you are saving the current game, or loading a previously saved game. (Your cassette recorder should be ready prior to using this command.)

If you have only 16K of memory then in addition to omitting all REMarks, you will also want to delete the Disk I/O routines in Lines 40000-40400.

Snakes

Remember the movie Raiders of the Lost Ark and how its hero Indiana Jones just hated snakes? Well, he would hate this game too — and it would take all his swashbuckling ingenuity to get out of The Arena. How will you fare?

Players find themselves in an arena full of snakes. The sides of the pit are electrified — just to add to the difficulty. Among the snakes in the pit are some very hungry man-eating creatures...

All you have to do is get out of the Arena by the exit, dodging any snake which takes a fancy to you. Sounds easy. But in order to score points you must hit energy banks dotted around the Arena on your way out — and once you reach the exit there's another arena full of snakes waiting for you.

The program uses XTAL Basic and should be easily converted to any other Basic. If you do not have to PRINT facility then you can use POKE (SPAX + 40*Y) or lots of cursor movements. The machine code routine can be replaced with GET, INCH, KBD, or whatever your system uses, it simply returns the ASCII value of your key even when you keep it depressed.

BY RICHARD JOHNSON

DODGER

RUNS ON AN APPLE

Watch out there's a gangster about! and a contract has been put out on you.

Dodger is a neat graphics and sound game which features a crowd of Chicago hoodlums armed with nothing more deadly than empty violin cases.

But they are out to get you. There's a fence around the screen and a small hole at the top through which you have to escape. There are 1 to 50 bad guys, you choose how many. The object is simply to get out of the exit before one of the bad guys catches you.

You are able to shoot some of the gangsters — but how many bullets you get depends upon the number of bad guys you've chosen.

It's simple but very addictive and trying to escape from all 50 villains is a real challenge.

We just want to be part of the furniture

Everyone's talking about home computers but few have seen them yet. The new Atari 800 & 400 computers and Commodores Vic 20 are now on show at Microchips.

Now at a price within everyone's reach, a personal computer plugged into your television set will not only provide entertainment for the whole family but will also prove to be an invaluable business and educational tool.

Both systems have sound and colour graphics, are expandable and easily programmed in your own home

ATARI

The personal computer will soon be part of the furniture in every home. Be ahead of the queue and contact Microchips for further details now. We will be delighted to demonstrate these exciting and invaluable additions to your home

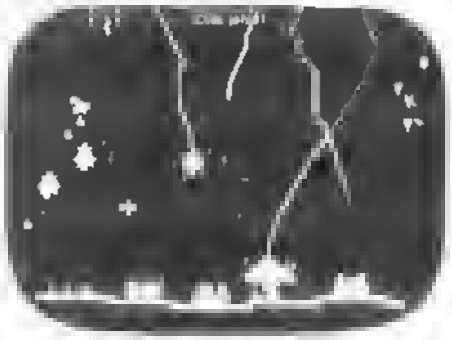
Kansas £350 'COMMANO' CONTEST Computer Fair—Earls Court April 13—25

Missile Command

Together, Mike Chalk and Kansas bring you not just another Arcade game

. . . an EXPERIENCE !



YOU command the ground to air missiles to save the cities from total Alien destruction, progressing to TEN levels of difficulty from not-to-easy to bloody impossible! Multiple displays with five types of Aliens and Satellite Bomber. Each type of Alien attacks on a different trajectory, even splitting and changing course without warning.

Based on the Arcade game of the same name, this is easily the finest computer game of its kind available today. It demands quick responses and no small amount of skill to overcome the Aliens even at the lower levels of play. As the game proceeds, so does the risk of total annihilation, giving at last, a very, very compelling game indeed, and one which will satisfy even the very skilled gamesman.

Very spectacular explosions and sound effects complete the realism. Infinite missile 'sight' control giving movement in every direction.

ONLY from Kansas—£9.50

Kansas

Programs for the TRS-80 and Video Genie. All prices are Vat paid and post free. Same-day first class return post service. All software in stock and fully guaranteed as we are the actual publishers. Free catalogue upon request. ACCESS & BARCLAYCARD WELCOME

AIR ATTACK

BY CHRISTOPHER EDE

Enemy planes on the starboard bow Captain. The odds are overwhelming as the fleet of bombers is inexhaustible and your warship has few chances to fire back.

As bombs crash into the ocean, you fire back with a rocket launcher at the back of the boat. It fires diagonally and cannot be moved up or down. If the planes dodge this fire you can open up with your ack-ack guns.

But with only 12 rockets to fire it is important you are accurate and choose your targets carefully

At the end of the game the computer reads out your score and shows how long you lasted.

To play Air Attack you use four keys and a space bar.

- Key "4" places your A.A. gun in the horizontal.
- Key "5" places your A.A. gun at a diagonal angle
- Key "6" places your A.A gun in a vertical position.
- Key "A" fires your A.A. gun.
- The "Space" bar fires your rocket launcher.

DYNACOMP

1 **FOREST FIRE!** Using excellent graphics and sound effects this simulation puts you in the middle of a forest fire. Your job is to direct operations to put out the fire while compensating for changes in wind, weather and terrain. Not protecting valuable structures can result in startling penalties. Life like variables are provided to make FOREST FIRE! very suspenseful and challenging. No two games have the same setting and there are 3 levels of difficulty. 24K (C) £16.99

2. **NOMINOES JIGSAW** A jigsaw puzzle on your computer! Complete the puzzle by selecting your pieces from a table consisting of 60 different shapes. NOMINOES JIGSAW is a virtuoso programming effort. The graphics are superlative and the puzzle will challenge you with its three levels of difficulty. Scoring is based upon the number of guesses taken and by the difficulty of the board set up. 24K (C) £16.99

3 **MONARCH** MONARCH is a fascinating economic simulation requiring you to survive an 8 year term as your nation's leader. You determine the amount of acreage devoted to industrial and agricultural use, how much food to distribute to the populace and how much should be spent on pollution control. You will find that all decisions involve a compromise and that it is not easy to make everyone happy. 16K (C) £10.99

4 **CHOMPELO** CHOMPELO is really two challenging games in one. One is similar to NIM: you must bite off part of a cookie but avoid taking the poisoned portion. The other game is the popular board game REVERSI. It fully uses the Atari's graphics capability and is hard to beat. This package will run on a 16K system. 16K (C) £10.99

5. **CRYSTALS** A unique algorithm randomly produces fascinating graphic displays accompanied with tones which vary as the patterns are built. No two patterns are the same and the combined effect of the sound and graphics is mesmerizing. CRYSTALS has been used in local stores to demonstrate the sound and colour features of the Atari. 24K (C) £9.99

6 **SPACE TILT** Use the game paddles to tilt the plane of the T.V. screen to "roll" a ball into a hole in the screen. Sound simple? Not when the hole gets smaller and smaller! A built in timer allows you to measure your skills against others in this habit forming action game. 16K (C) £9.99

7 **MOVING MAZE** MOVING MAZE employs the games paddles to direct a puck from one side of a maze to the other. However the maze is dynamically formed randomly built and is continually being modified. The objective is to cross the maze without touching (or being hit by) a wall. Scoring is by an elapsed time indicator, and three levels of play are provided. 16K (C) £9.99

8. **ALPHA FIGHTER** Two excellent graphics and action programs in one. ALPHA FIGHTER requires you to destroy the alien starships passing through your sector of the galaxy. ALPHA BASE is in the path of an alien UFO invasion, but five UFO's get by and the game ends. Both games require the joystick and get progressively more difficult the higher you score! ALPHA FIGHTER will run on 16K systems. 24K (C) £11.99

9. **THE RINGS OF THE EMPIRE** The Empire has developed a new battle station protected by rotating rings of energy. Each time you blast through the rings and destroy the station the empire develops a new station with more protective rings. The exciting game runs on 16K systems, employs extensive graphics and sound and can be played by one or two players. 16K (C) £10.99

10 **INTRUDER ALERT** This is a fast paced graphics game which places you in the middle of the "Predator" having just stolen its plans. The droids have been alerted and are directed to destroy you at all costs. You must find and enter your ship to escape with the plans. Five levels of difficulty are provided. INTRUDER ALERT requires a joystick and will run on 16K systems. 16K (C) £15.99

11 **GIANT SLALOM** This real-time action game is guaranteed addictive. Use the joystick to control your path through slalom courses consisting of both open and closed gates. Choose from different levels of difficulty, race against other players or simply take practice runs against the clock. GIANT SLALOM will run on 16K systems. 16K (C) £11.99

12. **TRIPLE BLOCKARD** TRIPLE BLOCKARD is a two-to-three player graphics and sound action game. It is based on the classic video arcade game which millions have enjoyed. Using the Atari joystick the object is to direct your blockade line around the screen without running into your opponent(s). Although the concept is simple the combined graphics and sound effects lead to high anxiety. 16K (C) £12.95

13. **MOON PROBE** This is an extremely challenging "lunar lander" program. The user must drop from orbit to land at a predetermined target on the moon's surface. You control the thrust and orientation of your craft plus direct the rate of descent and approach angle. 16K (C) £9.99

14 **SPACE TRAP** This galactic "shoot em up" arcade game places you near a black hole. You control your spacecraft using the joystick and attempt to blast as many of the alien ships as possible before the black hole closes about you. 16K (C) £12.99

15. **STUD POKER** This is the classic gambler's card game. The computer deals the cards one at a time and you (and the computer) bet on what you can. The computer does not cheat and usually bets the odds. However it sometimes bluffs! Also included is a five card draw poker betting program. This package will run on a 16K ATARI. Colour, graphics, sound. See review in Compute. 16K (C) £10.99

CRYSTALWARE

16 **FANTASYLAND 2041** Enter the Hall of Heroes and prepare for the greatest fantasy role-playing game you will see for years to come. Survive Congoland, Arabia, King Arthur, Captain Nemo, Olympus and Dante's Inferno. Uses over 400 hires screens. 48K (D) £34.95

17 **HOUSE OF USHER** Haunted house adventure game with scrolling graphics. Wander the creepy hallways of the three storey castle. Graphics, mysteries and sound. 48K (D) £19.99

18 **GALACTIC QUEST** A combination of Star Trek and Space Trader. Battle the animated Vegon fighters as you warp from galaxy to galaxy. Landing and trading with hundreds of planets. Super hires graphics and sound. 48K (D) £19.99

19 **SANDS OF MARS** Voyage to Mars. Journey across the ravines of Mars, explore the mystery of the ice mare. Hires graphics. 2 discs. 48K (D) £26.95

20 **BENEATH THE PYRAMIDS** Find your way through the perilous chambers of the pyramids to discover a golden statue of the cat goddess. Fast Hires graphics, sound. Your little man actually moves through the corridors which you can see on the screen. 48K (D) £19.99

21 **WORLD WAR II** A real time action war game. A map display of Iran and Iraq with 128 separate types of units. Move nuclear submarines and battleships through two world wars. 48K (D) £19.99

22. **WATERLOO** Napoleonic Real battle. Using the same equipment (across opponents and terrain as he did. Historically accurate and extremely complex. 48K (D) £32.95

ATARI PROGRAM EXCHANGE

23 **DATA MANAGEMENT SYSTEM** Ideally suited for short records such as records, tape and book catalogues, telephone and address directories. 32K (D) £20.95

24 **BLACKJACK TUTOR** Good graphics make this an enjoyable and challenging opponent. Plays to full casino rules. 16K (C) £9.75

25 **VIDEO MATHS FLASHCARDS** A good and amusing maths tutor for the younger generation. 8K (C) £11.25

26 **747 LANDING SIMULATOR** Land your 747 jet safely with joystick control. Cockpit graphics of instrumentation and runway. Mid air collisions, auto-pilot, air turbulence etc. 24K (C) £9.75

27 **EASTERN FRONT (1941)** Stunning graphics make this the best war game yet on a micro. Fine scrolling as many as 16 soldiers. Battle simulation. An absolute must. This one. 16K (C) £30.25

28 **CODECRACKER** A computer implementation of a widely know game of LOGIC. 8K (C) £11.25

29 **DOMINATION** 1 to 5 players compete for power via economic means. Nuclear or conventional warfare. 24K (C) £9.75

30. **TERRY** A lightweight version of the artificial intelligence programs designed to emulate psychotherapists. 32K (C) £11.25

31 **BUMPER POOL** The colours sounds used in this program create some pleasing graphics. It is easy to play the game but not so easy to pocket the balls. 16K (C) £13.25

32 **TACT TREK** A tactical level combat game. A battle of wits and race against some very clever enemies. 24K (C) £13.99

33. **SPACE TREK** A strategy game based on the classic computer Star Trek game. 24K (C) £7.99

34 **ANTHILL** A two player game. A race to see who can escape to the top of the maze first. But ants constantly swagging and a frantic blue ant keeps zapping you. 8K (C) £11.25

35 **CENTURION** A real time war game involving Romans and Barbarians, which calls for quick thinking to prevent you from being wiped out. 16K (C) £13.99

36 **MINOTAUR** A randomly generated maze game that is different every time. Try to escape before the Minotaur eats you. 24K (C) £11.25

37 **OUTLAW HOWITZER** Two very popular arcade games with excellent graphics. Both games are a lot of fun and a must for every computer owner. 24K (C) £18.75

38 **LOOKAHEAD** An unusual graphical number game using some interesting strategies. Good fun for all. 24K (C) £11.25

39 **BABEL** A fast moving two-player game packed with sound effects and graphics. A race to build a tower to reach the stars. 16K (C) £14.75

40 **AVALANCHE** Based on the arcade game. This game appeals to all ages. Great use of sound and graphics. 16K (C) £14.75

41 **GRAPHICS SOUND DEMO** Shows off the Atari's outstanding graphics and sound capabilities with stunning effect. 32K (D) £18.75

42 **SOUND EDITOR** Helps you create short sounds such as blanks, groans, rabbles etc. Very useful for the games programmer. 16K (C) £18.75

43 **'EXTENDED WSFN** An educational graphics language developed for teaching programming concepts. The graphics the program generates can be dazzling. 16K (C) £19.99

44 **DISK FIXER** An invaluable utility for salvaging crashed or destroyed discs. Styled after the Atari DOS menu structure. 24K (D) £22.95

ler SOFTWARE

ers also welcome)

45 **BASIC UTILITY FOR KENUMBERING** SURP should meet most of your renumbering needs A very useful utility 16K (C) £19 75

46 **BASIC PROGRAM COMPRESSOR** Masher not only makes your programs smaller but also makes them run faster 32K (C) £19 75

47 **CAVERNS OF MARS** Fly your attacking spacecraft right into the bowels of an enemy Martians base blasting away at last clumps and Martian fighters as you twist and swerve from sudden cavern rock inserts The combination of dark haunting subterranean graphics and the fast paced continuous battle action makes this one of the most exciting games on a computer 16K (C)

ADVENTURE by Scott Adams

48 **ADVENTURELAND** You wander through an enchanted world trying to recover the 13 lost treasures You'll encounter wild animals magical beings and many other perils and puzzles Can you rescue the Blue Ox from the quicksand? Or find your way out of the maze of pits? Happy Adventuring 24K (C) £19 50

49 **PIRATES ADVENTURE** 'Yo ho ho and a bottle of rum' You'll meet up with the pirate and his deffy bird along with many strange sights as you attempt to go from your London flat to Treasure Island Can you recover Long John Silver's lost treasures? Happy sailing matey 24K (C) £19 50

50 **MISSION IMPOSSIBLE ADVENTURE** Good morning your mission is to — and so it starts Will you be able to complete your mission on time? Or is the world's first automated nuclear reactor doomed? The one's well named It's hard there is no magic, but plenty of suspense Good luck 24K (C) £19 50

51 **VOODOO CASTLE** Count Cristo has had a fiendish curse put on him by his enemies. There he lies with you his only hope Will you be able to rescue him or is he forever doomed? Beware the Voodoo man 24K (C) £19 95

52 **THE COUNT** You wake up in a large brass bed in a castle somewhere in Transylvania Who are you what are you doing here and WHY did the postman deliver a bottle of blood? You'll love this ADVENTURE In fact, you might say it is Love at First Byte 24K (C) £19 50

53 **STRANGE ODYSSEY** Marooned at the edge of the galaxy you've stumbled on the ruins of an ancient alien civilisation complete with fabulous treasures and unearthly technologies Can you collect the treasures and return or will you end up marooned forever? 24K (C) £19 50

54 **MYSTERY FUN HOUSE** Can you find your way completely through the strangest Fun House in existence, or will you always be kicked out when the park closes? 24K (C) £19 95

55 **PYRAMID OF DOOM** An Egyptian Treasure Hunt lands you into the dark recesses of a recently uncovered Pyramid Will you recover all the treasures or more likely will you join IN Pauline for that long eternal sleep? 24K (C) £19 95

56 **GHOST TOWN** Explore a deserted western mining town in search of 13 treasures From rattlesnakes to runaway horses this ADVENTURE's got them all! Just remember Pardner they don't sell them Ghost Towns for nothin' (Also includes new bonus saving system!) 24K (C) £19 95

57 **SAVAGE ISLAND — PART 1** WARNING FOR EXPERIENCED ADVENTURERS ONLY! A small island in a remote ocean holds an awesome secret Will you be the first to uncover it? NOTE This is the first of a larger multipart Adventure it will be necessary to purchase additional packages to complete the entire Adventure 24K (C) £19 95

58 **SAVAGE ISLAND — PART 2** After struggling through Part 1, you have the consolation of knowing its half over This concludes this two part ADVENTURE it requires you have completed #10 and received the password to start it! 24K (C) £15.50

59 **12 GOLDEN VOYAGES** The King lies near death in the Royal Palace — you have only three days to bring back the elixir needed to rejuvenate him Journey through the lands of magic fountains, sacred temples, stormy seas and gold gold, GOLD! Can you find the elixir in time? 24K (C) £19 95

60 **ANGLE WORMS/CROLAN DIVERSION** Each player attempts to prevent his growing worm from hitting an obstacle! Each worm may fire a projectile from its head to try and shorten its own length Watch for the walls 8K (C) £12 95

61 **MOUNTAIN SHOOT** Pick your powder and pick your angle as you plug away over the mountains Great sound and superb colour Has special limited powder version too for greater challenge 16K (C) £12 95

62 **SUNDAY GOLF** Neither rain nor snow nor threat of hail will keep the Sunday golfer from this course Grab your clubs and head for the fairways This course is never closed 16K (C) £12 50

63 **LUNAR LANDER** Colour graphics, 6 voice sound Using the player missile graphics capabilities of the Atari you must guide the module carefully across the landscape Multi skill levels Excellent graphics 24K (C) £12 95

64 **DEFLECTION** A fast moving arcade game with simple rules and many skill levels Will keep you and all your kids occupied for hours and hours Early reports indicate this program has addictive qualities Also include Pong Simon 8K (C) £12 50

65 **STAR TREK 3 5** By Lance Nickison Classic Star Trek with Action Sound Effects 3-D galaxy made up of 192 quadrants includes stars, planets, black holes and a pulsar Amazing visual displays etc 32K (C) £19 50

66 **GHOST HUNTER** Rid the mansion on Huckleberry Hill of Ghosts. An exciting text action, arcade type game using excellent sound and graphics 16K (C) £24 50

67 **FROG** Solve the problem of the Frogs by jumping over each other to achieve the correct order Fun for all 16K (C) £9 95

SANTA CRUZ/TRICKY TUTORIALS

68 **DISPLAY LISTS** Teaches you how to alter the screen format of small and large text on the screen together and high and low res graphics 16K (C) £9 95

69 **HORIZONTAL/VERTICAL SCROLLING** Enables graphics or text to be moved up down or sideways You could move only the text on the bottom half of the screen or create a map and scroll smoothly over it 16K (C) £9 95

70 **FACE FLIPPING** Learn how to have the computer draw the next page you want to see while you are still looking at the previous page then flip to it instantly A very useful program 16K (C) £9 95

71 **BASICS OF ANIMATION** This program shows you how to animate simple shapes (with sound) using Print & Plot commands and also has a nice Player/Missile graphics game you can play with 16K (C) £9 95

72 **PLAYER-MISSILE GRAPHICS** This program shows you how to create a simple shape called a player then takes you through over 25 examples to create a complete business application and a small game 32K (C) £19 95

73 **SOUND** Unless you have spent many hours experimenting with the four voice channels of the Atari you will learn a lot from this one With many examples of special sound effects 16K (C) £9 95

74 **MINI WORD PROCESSOR** Requires printer and 32K of memory Suitable for simple editing of text and storage of text up to 5 pages of length on either disc or tape Great value 32K (C) £9 95

75 **KIDS PROGRAM 1** Three programs on one tape Maths test your child's maths skills Dialogue talk to your computer, Lost Treasure search over a small island looking for a treasure 16K (C) £9 95

76 **BOB'S BUSINESS** Programs on this tape include Amortisation Table Monthly mortgage payment, Depreciation schedule Savings and Loan Averages Square Feet and Yards Paycheck Calculation Interest on Investment Mortgage Comparison Projects Expenses Monthly Bar Graphics Decimal/Hex Conversions US/Metric Conversions Checkbook Balancer 32K (C) £19 95

77 **KIDS 2** Three more programs for your children Spelling Bee, input and test those monthly lists jumble up letters give a lot of fun Touch Tutor follow the computers instructions and stop yourself laughing 16K (C) £9 95

78 **THE GRAPHICS MACHINE** Type in simple commands like line box circle polygon fill and save screen to get those pictures you can save and retrieve in seconds Several demos are included in this great program 48K (D) £13 95

79 **PLAYER PIANO** Turns your keyboard into a mini piano Create your own songs save on cassette or disc, up to 400 notes in memory 24K (C) £9 95

THORN EMI

80 **HUMPTY DUMPTY & JACK AND JILL** 48 entertaining and educational puzzles based on nursery rhyme themes from pre-school to adult. 16K (C) £19 95

81 **HICKORY DICKORY DOCK & BAA BAA BLACK SHEEP** As above 16K (C) £19 95

82 **BRITISH HERITAGE JIGSAW PUZZLES** 32 electronic jigsaw puzzles based on four famous British themes 16K (C) £19 95

83 **EUROPEAN SCENE JIGSAW PUZZLES** As above only set in Europe 16K (C) £19 95

84 **DARTS** Over 300 games options based on the pub game of darts for up to 8 players 16K (C) £19 95

85 **CRIBBAGE & COMINOES** 10 variations of these popular pub games to play against the computer 16K (C) £14 95

86 **SNOOKER & BILLIARDS** Full British championship rules and practice options for these popular games 16K (C) £19 95

87 **TOURNAMENT POOL & 9 BALL POOL** The American tournament rules version plus British 8 ball 16K (C) £19 95

88 **ROTATE & TILT** 2 x 2 3 x 3 and 4 x 4 variations of the three dimensional cube puzzle plus a game of skill with over 300 variations. 16K (C) £14 95

89 **HOME FINANCIAL MANAGEMENT** Financial planning and control specially designed for the needs of the British home Available early 1982

90 **JUMBO JET LANDER** A flight simulator to take off, fly and land a Jumbo Jet Available end of February 1982 16K (C) £29 95

91 **SUBMARINE COMMANDER** A World War II offensive submarine patrol simulator Available end of February 1982 16K (C) £24 95

REV

RUNS ON A SINCLAIR ZX81 IN 16K

THE GAME IS PLAYED ON AN 8 X 8 BOARD. YOUR COUNTERS ARE "O",AND THE COMPUTER'S "▩".

THE FIRST FOUR COUNTERS ARE IN PLACE. YOU TAKE TURNS TO PLAY A COUNTER SO THAT IT IS ADJACENT TO AN ENEMY COUNTER, SANDWICHING ONE OR MORE ENEMY PIECES IN LINE BETEEN IT AND ANOTHER FRIENDLY PIECE. ANY PIECES SO CAPTURED BECOME YOURS.

IF YOU ARE UNABLE TO CAPTURE, THE TURN IS FORFEIT.

TO MAKE YOUR MOVE, ENTER THE COLUMN, THEN THE ROW, AND PRESS NEWLINE. IF YOU CAN'T GO THEN ENTER "N".

THE SCREEN BLANKS FOR 10-20 SECONDS WHILE SELECTING A MOVE. PRESS "NEWLINE" WHEN READY.

VERSI

8K

REMLOAD RUNS IN JUST OVER 1K

BY GORDON STEVENS

Take on your Sinclair at the recently revitalised game of Reversi.

The old English game of Reversi — now popular, since being re-invented as Othello — is a two-player strategy game. Those of you who have been following Tom Napier's occasional column on the game in this magazine will know that computers are capable of beating us poor humans. Your Sinclair may not actually be able to defeat you every time but it will give all but the best Reversi players a real challenge.

Gordon Stevens has utilised some machine code in his program which needs careful handling on the Sinclair.

The USR routine is used for a preliminary screening procedure in the selection of the computers best move. This allows the main part of the evaluation routine to be written in Basic while still achieving a good response time.

The machine code section is held in REM statement 1, entry point 4095H (16533 in decimal) Locations 4082H-4087H (16514-16519 Dec) are used for transferring data to and from the Basic program via PEEK and POKE commands.

REM statement 1 can be written from the keyboard, provided that the function keys are used where appropriate.

Commands such as RETURN can be entered by first using THEN followed by the command and deleting THEN afterwards. Statements 10 to 19 modify statement 1 where the code cannot be loaded directly.

Alternatively the routine may be loaded via a Hex encoder, such as Remload into blank REM statement from the Hex dump given at the end of the Reversi program.

Strategy is based on three main factors:

- A value for each position on the board, held in array "F" and which is modified when certain positions have been occupied.
- The nature of the end positions formed by the newly laid piece. For example a line ending at an edge position at each end is worth more than one with a space at each end. The values are held as a table in array A.
- The number of pieces captured. The significance of this increases as the game progresses.
- More tips on Reversi will be coming in our May issue

ARCADE GAMES FROM QUICKSILVA

ALL PROGRAMS WRITTEN IN MACHINE CODE TO ENSURE FAST FLICKER-FREE GRAPHICS

QS DEFENDER

Generally considered to be the best arcade type game available for the ZX Computers
Up — Down — Thrust — Fire
First and only full screen display Software to drive QS sound board Moving planet ary surface Up to 64 fast moving characters on screen at once On screen scoring Ten missiles at once Increasing attack patterns as the game progresses

QS ASTEROIDS

Quicksilvas new arcade game

Left — Right — Thrust — Fire
Software to drive QS sound board Multiple missiles firing in 8 directions On screen scoring Increasing number of asteroids Full mobility of ship to all areas of the display Asteroids break up into smaller asteroids when hit Wrap around screen

All programs are recorded twice on high quality cassettes to ensure reliability
Cassette inserts are full colour reproductions of original artworks by 'STEINAR LUND' Full instructions sent with order
QS-DEFENDER 4K for ZX-80 with 4K ROM and minimum of 3K of RAM
QS DEFENDER 8K for ALL machines with 8K ROM and minimum of 3K of RAM
QS-ASTEROIDS for ZX 81 (or ZX 80 with 8K ROM and FAST/SLOW mod) + 8K RAM .
All at the fully inclusive price of £5 50 each
For complete arcade realism Quicksilva also produce a range of high quality hardware
QS SOUND BD for 3 channel sound effects or tunes
QS CHRS BD Program your own characters for use with any program Enables display of real SPACE INVADERS characters on your machine
Also QS MOTHER BD and QS 3K RAM BD

ENTRY POINT 4095H (16533D)

Ramload displays and alters any byte [illegible] memory using Hex coding

It is just over 1K but deleting statement [illegible] will enable it to squeeze into the basic machine

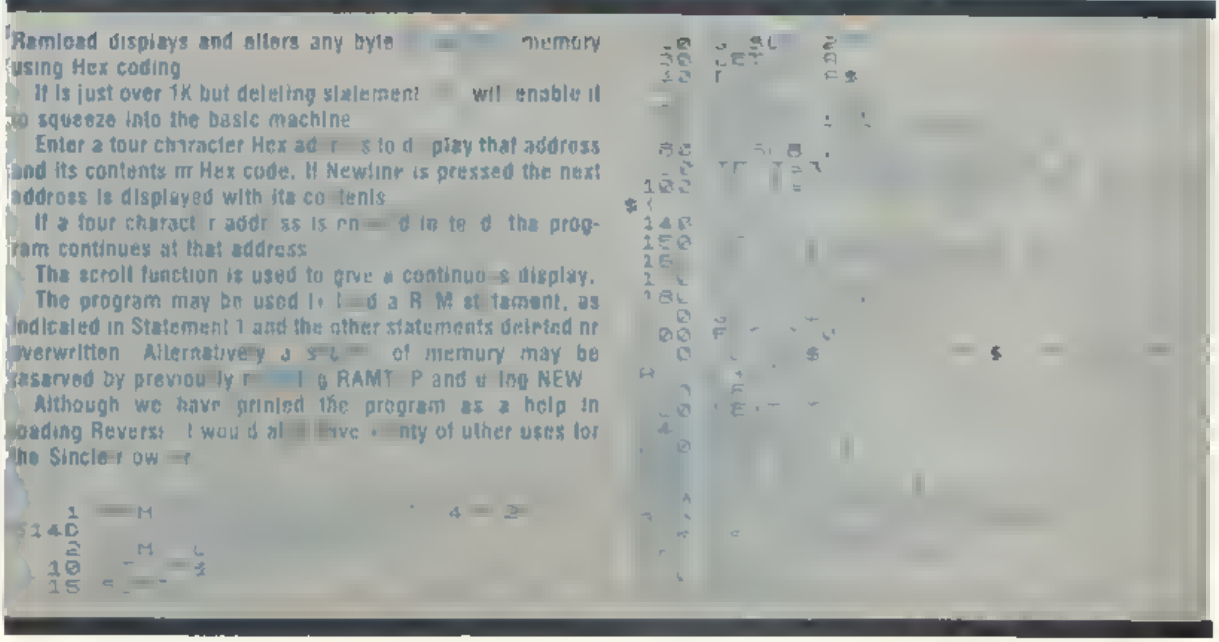
Enter a four character Hex address to display that address and its contents in Hex code. If Newline is pressed the next address is displayed with its contents

If a four character address is entered to load the program continues at that address

The scroll function is used to give a continuous display.

The program may be used to load a RAMTOP statement, as indicated in Statement 1 and the other statements deleted or overwritten. Alternatively a section of memory may be reserved by previously entering RAMTOP and using NEW

Although we have printed the program as a help in loading Reversi I would also have plenty of other uses for the Sinclair owner



RUNS ON AN ATARI IN 8K

WITH A JOYSTICK

BY JAMES GARO

OCTA

ON

DRAW

If you thought Etch-a-Sketch was the last word in automated art, Octadraw will prove you wrong.

As the name suggests, Octadraw enables the player to draw in eight directions at once. This use of symmetry will suggest all kinds of new ideas to the amateur artist and produce some interesting results from those who previously believed they possessed no artistic bent whatsoever.

The program is designed for an Atari with 8K and at least one joystick.

Run the program, then press the start button at the right of the keyboard. You will see a blinking cursor in the centre of the screen. Using the joystick in slot #1, you may move the cursor around the screen. With the fire-button pressed, the cursor will leave a trail of colour as it moves. Seven mirror images of the line will also appear, three will match the cursor colour, and four will be a different colour.

Pressing the select button (just above start at the right of the keyboard) will select the computer to do the drawing, while you sit back and watch. When you wish to continue drawing, just move joystick #1 and hold it until the computer finishes the line it is currently drawing. You may then add to the computer's drawing.

Pressing the button with the word "clear" on it will erase the current picture.

If a joystick is placed in slot #2, you can control the colours that Octadraw uses. Pressing forward will change the background colour; pressing left changes one of the drawing colours while pressing right changes the other. Holding the fire-button down during any of these three operations will change not the colour but the luminance of the corresponding colour. With eight shades of 16 colours for each of the three parts of the drawing, there are over two million possible colour combinations!

VARIABLES USED

A=32: Added to x-value to centre drawing.

C=3: COLOUR value

H1, H2, H4: Colours used in SETCOLOUR x, Hx, Ly statements

I: Loop variable

KEY=764: PEEK address to determine which key has been pressed

L: Used in line 10 to create mixed mode display

Used in line 620 to determine length of line to be drawn by the computer

L1, L2, L4: Luminances used in SETCOLOUR x, Hx, Ly statements

P=95: Used to calculate reflections across X-axis

Q=127: Used to calculate reflections across Y-axis

AUTOMATED ART MADE EASY

S: In line 100 S is the value of STICK(0). This determines the direction in which the cursor will move.

In line 800, the computer "makes up" a value for S, and this value determines the direction of cursor movement.

START=53279: PEEKing at this location reveals which of the START, SELECT, or OPTION buttons are pressed.

T: In line 500, T gives the status of the fire-button: 0 if pressed, 1 if not. This determines whether a line will be drawn or not.

Similarly, in lines 800 and 810 the computer "pretends" to press the fire-button about 9/10ths of the time. You may change this fraction by changing "0.1" in line 810 to some other fraction between 0 and 1.

V: Reflects any activity from joystick #2. This changes the colours of the drawing.

W: Tests for the fire-button on joystick #2. This affects the brightness of the colours.

X, Y: The coordinates of the point to be PLOTted.

Z: Temporary storage used when X and Y are switched at the end of the drawing subroutine

VIC 20 SOFTWARE

QUALITY SOFTWARE FOR THE 3.5 VIC 20 COMPUTER

DEFLEX

Fast-moving action and spectacular colour and sound effects add to the excitement of this original game. Deflect the rapidly moving ball to hit stationary or moving targets. Records top ten high scores 20 skill levels

ROX

At last an original and compulsive space game. Defend your moon base from the deadly ROX from space. Increasing levels of difficulty and superb visual and sound effects make this the greatest new arcade-type game sinca Space Invaders.

DEFLEX and ROX on same cassette £4.95

TEN SUPERB 3.5 PROGRAMS — ALL TEN FOR £6.95

GEM+
Create and store your own custom character sets

TANX
Tank battle for 2 players

MUSIC
Encode tunes in three-part harmony up to 130 notes long on 3.5k machine

SPACE ZAP
Destroy alien spacecraft attacking your space station.

BREAKOUT
Superb sound and colour effects.

HI-RES
Sketch on a 128 x 128 pad using keyboard or joystick

SPIRO
Create spirograph-type patterns in hi-res

VIC TRICKS
Program demonstrates the special uses of VIC chip registers

MASTERMIND
Uses colour and sound to the full

WORD GAMES
Unusual and challenging game for 2 or more players

FROM THE PUBLISHERS OF THE BEST SELLING BOOKS FOR THE SINCLAIR COMES:

Not Only But Also..

PROGRAMS FOR THE SINCLAIR ZX81...1K

Probably the LARGEST range of ZX 81 Software in the WORLD

Not Only

..does this book contain over 30 fully debugged and exciting programs every one of which will fit into the basic 1K memory of your Sinclair ZX81 including programs such as **STAR WARS, LUNAR LANDER, BLACKJACK, MINI ADVENTURE, DRAUGHTS, BREAKOUT**

But Also

- Detailed explanation of how these programs were written
- Lots of hints on how you can write exciting programs for your ZX81.
- Numerous space saving techniques — obviously invaluable to the ZX81 owner
- PEEKS and POKES and all the other 'complicated' functions are clearly explained
- MUCH, MUCH MORE.

£8·95

Understanding Your ZX81 ROM

Plus special section. How to use machine code routines in your BASIC programs by DR. I. LOGAN

Dr Logan was the first person to dissassemble the Sinclair ZX80 Monitor and was the co-author of the ZX80 COMPANION

In UNDERSTANDING YOUR ZX81 ROM Dr. Logan illustrates all the facilities of the ZX81 Monitor how it works and how you can use it in your own programs. A special section shows you how you can squeeze more power into your ZX81, by using machine language and machine language subroutines

An essential book for those who really want to understand the full working of the SINCLAIR ZX81

RUNS ON AN ATOM IN 2K

BY MURRAY ALLEN

MB

Trapped in a collapsing labyrinth, it's a race against time to get to the exit before the roof caves in around you.

Murray Allen has come up with a simple but innovative game which requires some swift thinking to spot the way out before it's too late.

The noughts which appear in the maze are an additional way of judging your performance: how many can you run over on the way out.

There are several ways the game could be improved but as an idea, it is quite an original one and could well spawn several interesting progeny.

We look forward to hearing from any readers who build on Murray's idea.

You are represented on the screen by a (hash) symbol and have to reach the bottom of the screen. The control keys are: T- to go up; V- to go down; G- to go right; F- to go left.

C✱tech — Big ideas for small computer — all software by return of post!!

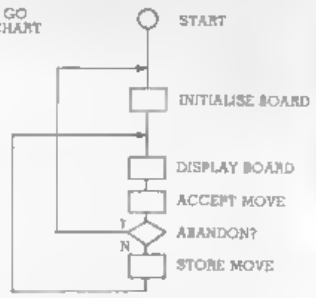
GO GO GO

BY ALLAN SCARFF

The popular Eastern strategy game of Go is one of the few games which is quite simple to represent on a computer screen.

This is the first step in turning your computer into a Go opponent. To tackle this problem, you will need a computer: Pet, Apple, Deep Thought — any computer will do! You'll need at least 2K of RAM and a video terminal. Colour graphics would be super and so would disc storage but neither are essential.

I will attempt in this and future articles to describe the building bricks of Micro Go. These are designed to minimise effort in the long run. Each rectangle shown in diagram 1 represents a function which, coded separately, can be used unchanged in future iterations of the Micro Go program.



Declare a 9 × 9 array (call it "Boord") to simplify testing (You can upgrade to 19 × 19 later). Each element of the Board, representing an intersection, must hold one of three values: 'empty", "black" or "white" (say, 0, 1 or 2). Initialising the Board is merely putting "empty" values into every element. Storing a move is putting one of the three values into the element specified by coordinates.

The Display Boord function should be coded to display the entire board both at the start and after each move. It may be possible to overwrite any previous display, giving the effect of altering only a single stone.

If you have graphics, try to represent the board as shown in the diagrams (then you won't shock those Go players used to the traditional board and stones).

If you haven't a graphics terminal, a fair representation can be achieved with "X"s for black stones, "O"s for white, and "+"s for vacant points.

There are many schemes for accepting moves. Here is just one example: Each move is entered by typing a command character followed by coordinates. The command characters are.

"B" add a black stone
"W" add a white stone
"–" remove a stone
"A" abandon game and reinitialise the board

For example, the stones in diagram 2 could be placed by BD6, BJ4 and BA1. The Accept move function must also translate the coordinates into numbers suitable for addressing the elements of the Board array and should reject coordinates outside of the permissible range. All that the Store move function will then be required to do is alter a specific element to empty, black or white.

You can now play Go with a friend using your computer as if it were the old fashioned board and stones (except you'll find it harder to spill the stones!). My next article will bring out some of the advantages a computer has over the traditional Go equipment.

THE BASIC RULES OF GO

1. One player uses black stones. The other white.

2. The board starts empty. Play consists of the contestents placing, in turns, a single stone on the intersections of a 19 × 19 grid. Black starts first. Once placed, stones are not moved unless captured.

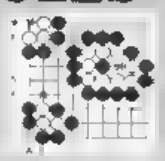
3. The object of the game is to surround territory. 1 point is awarded for each vacant intersection surrounded and also for each opponent stone captured.

4. Suicide (capturing your own stones) is forbidden!

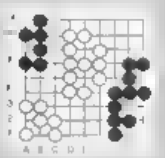
5. A player may pass his turn.

6. A game is ended by resignation or by three consecutive passes.

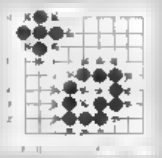
7. The player with the most points wins.



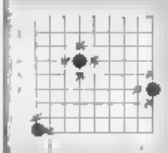
(1) CAPTURE A single stone or an entire group is in danger when it has but one liberty left. An opponent's stone played on that liberty captures that stone or group. All captive stones are removed from the board. Assuming it is his turn, black can capture any one of the three white groups shown here.



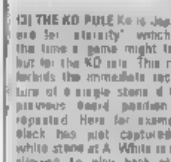
(3) EYES A space within a group is called an eye. As a consequence of the suicide rule, groups with two or more separated eyes can never be captured. Groups that can be reduced to a single liberty (internal or not) are doomed. Each group here is in serious trouble. Try as you might, the suicide rule will prevent you from removing that last liberty.



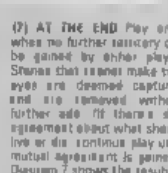
(5) CONNECTED STONES Stones of the same colour placed on adjacent intersections are safely connected and act as a unit. Here we show two groups of safely connected stones along with each group's liberties.



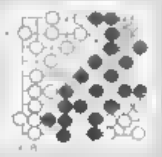
(2) LIBERTIES Unoccupied intersections adjacent to stones are called liberties. A single stone in the middle of the board has 4 liberties. At the edge it has 3 and at the corner only 2 liberties. Here the liberties are marked with crosses.



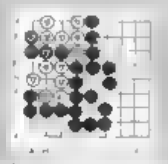
(4) THE KO RULE Ko is Japanese for "eternity" which is the time a game might take but for the KO rule. This rule forbids the immediate recapture of a single stone if the previous board position is repeated. Here for example black has just captured a white stone at A. White is not allowed to play back at A immediately. He must play elsewhere. Then black can play at A, giving life to his group. Note that surrounded KOs are filled at the end of the game (black must place a stone at A).



(7) AT THE END Play ends when no further territory can be gained by either player. Stones that cannot make two eyes are deemed captured and are removed without further ado. If there is disagreement about what should live or die, continue play until mutual agreement is gained. Diagram 7 shows the result of a game. The one-eyed white group marked ☆ is dead. Assuming two creatives



spaces gained previously (by Pris) scores to white (8 + 2 and Black 15 + 5. A draw!



(6) THE SEKI Occasionally you may stumble on a Seki, an example of which is shown here. Neither player has two eyes but neither can afford to play first. In this Mexican stand-off neither player scores points for their groups in Seki. Marked ×

Adventure

NAME OF THE GAME

Adventure is the name given to the dragons and castles game which features on the Atari T.V. games centre.

If you own an Atari games centre and have wondered about the Adventure cartridge, be warned that it is not the sort of game I usually describe on these pages.

This game is purely graphical and is played with a joystick control. The player has to guide his "puppet" through a maze which is shown from above and consists of several discrete "pages".

The aim is to get the treasure, avoid or kill the dragons, keep an annoying bat from disrupting your tactics too much and win home through a maze.

Three games are provided according to the package — this really means one basic game with additional features that increase the interest and difficulty level. This game, written by Warren Robinett, is popular with Atari owners, but not what you'd really call an Adventure!

Adventures would be very dull if you couldn't pick up and drop things — all those treasures — so let us take a look at possession commands TAKE, DROP and INVENTORY.

To "take" an object, the following conditions must be met:

- The verb "take" or equivalent must be decoded from the input.
- The noun decoded must be an object in the current location.
- The player must not already be carrying too much.
- The object, player and environment may have to pass other condition tests for a successful "take".

In the example used last month, the decoded number (K1) for TAKE was 2. To check the second condition above, the array P(n) must be scanned. Refer to Figure 1. Suppose the current location (LN) is 2 and the player types "TAKE COW". The scanning may be done as follows:

```
1000 FOR I=0 TO 3: IF LEFT$(O$(I),3)=R5$ THEN K2=I ELSE NEXT: GOTO 3000.
```

Line 3000 will be a standard reply like "I don't know what a ";R3$;" is".

However, we have found the word COW and the FOR/NEXT loop is exited with K2=2. But where is the cow?

```
1010 IF P(K2) <> LN THEN 3010 ELSE LET P(K)=50: IN=IN+1: GOTO 3040.
```

Line 3010 is another standard reply like "I don't see it here" since P(K2)=3 and LN=2.

If the player is in location 2 then the ELSE statement executes. Line 3040 is a reply, saying "OK". IN is the inventory count which is incremented to keep track of how many objects are being carried. 50 is an imaginary location number, which we will use for objects being carried. When the screen is updated, since P(2) now=50, location 3 will not show a cow.

Condition 3 has not been checked yet however, so we must expand line 1010 to cover both that and the miscellaneous condition check:

```
1010 IF P(K2) <> LN THEN 3010 ELSE IF IN > 5 THEN 3020 ELSE IF C(K2) < 0 THEN 3030 ELSE LET P(K)=50: IN=IN+1: GOTO 3040.
```

Notice that an arbitrary limit of six has been set on the total number of objects carried. C(n) is an array used as a flag for objects, and I will describe this in detail later. At this stage we can establish a convention that if C(n) is negative then for some reason the object can't be taken even though it is in the current location.

Dropping an object is simpler than taking one. After "DROP" is decoded and K2 for the object has been set:

```
1100 IF P(K2) <> 50 THEN 3050 ELSE LET P(K2)=LN, IN=IN — 1: GOTO 3040: REM if not carrying it say so else deposit at current location and decrement inventory.
```

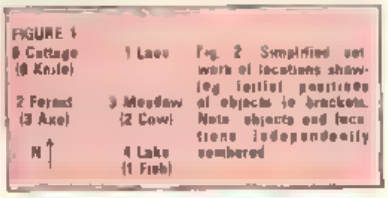
We now have quite a collection of "standard replies:"

```
3010 (reply) = "I DON'T SEE IT HERE": GOTO (start).
3020 (reply) = "I'M CARRYING TOO MUCH": GOTO (start).
3030 (reply) = "IMPOSSIBLE!": GOTO (start).
3040 (reply) = "OK": GOTO (start).
3050 (reply) = "I'M NOT CARRYING IT!": GOTO (start).
```

The method of screening replies is dependent upon the structure of the program.

To complete our session on possession, we need a reply to INVENTORY. This is simply a matter of concatenating all the objects whose current location is 50 into one reply string:

```
1200 (reply) = "I'M CARRYING".
1210 FOR I=0 TO 3: IF P(I) = 50 THEN LET (reply) = (reply) + O$(I):
1220 NEXT: GOTO (start).
```



ROOMS AT THE TOP

I was particularly pleased to receive a copy of Wizard's Mountain to review from the Software House. It is written in Basic so I was keen to see the speed and size of the game, not to mention the program listing. The speed for most commands is good — after hitting enter there is only a slight delay before the response.

Written by Jeremy Zorwold, the setting is a mountainside castle with a number of well described rooms. Objects appear at different locations each time the game is played, making for multiple solutions. Some of these objects look very much like treasure but seemed to incur a negative score when carried. Frequently and without warning it gets dark and one's legs are often paralysed by an evil spirit preventing movement for five turns.

Among the objects are a telescope that falls to pieces for a reason I didn't discover and a digital watch, which when read caused the computer to break out of the program with an illegal function command error. This turned out to be because it was trying to compute the log of zero — for a watch? Fascinating!

JOYSTICKS FOR THE ZX81 AS SEEN AT THE ZX MICROFAIR

* THE MOST EXCITING DEVELOPMENT EVER FOR THE ZX81 * TURNS YOUR ZX81 INTO A TRUE PROGRAMMABLE GAMES MACHINE * FREE YOURSELF OF THAT DEAD, UNRESPONSIVE KEYBOARD * PLAY INTERACTIVE GAMES WITH IMMEDIATE RESPONSE * CONTROLLER BOARD FITS INBETWEEN THE RAM PACK AND THE ZX81 (NO SKILL IS REQUIRED TO MAKE THIS CONNECTION AND IT ACTUALLY IMPROVES THE STABILITY OF THE RAM PACK) * UP TO 2 JOYSTICKS MAY BE ATTACHED TO THE CONTROLLER BOARD SO ALLOWING 2 PLAYERS TO PLAY GAMES AGAINST ONE ANOTHER * THIS ADD-ON EXTENDS THE CAPABILITY OF THE MACHINE — IMAGINE THE TREMENDOUS VARIETY OF GAMES THAT NOW BECOME POSSIBLE * DETAILS SUPPLIED ON HOW TO USE THE JOYSTICK IN YOUR OWN PROGRAMMES

For the games presently available you will raquire a controllar board price £19 50 and 1 joystick price £9 60. Please add £0 80 p&p

Games available (many more to follow, especially 2 player games) ZX Space Invaders + Space Maze £6 95 + 40p p&p ZX Breakout £4 50 + 40p p&p.

ZXB1 CHESS

Look at these features

- Graphic display of positions on chess board
- Displays separate record of your move and the computar s.
- Written in Superfast Machine Code
- Plays all legal moves including Castling and Enpassant but if an illegal move is entered will answer illegal move
- Six levels of play
- Random weighting computar doesn t always play the same move in an identical situation
- Board can be set up to any configuration and you can even alter or exchange sides in mid game
- Amazing power is 10k of memory
  PLUS Chess Clock!
- Records and displays time taken per player
- Resetable function
- Single key entry

Only £8 50 + 40p p&p

If you write a program which is exceptional submit it to us and if suitable we will offer a royalty

ZX NEW YORK

Fast Addictive Game

Can you bomb and shoot your way out of trouble before your plane crashes into the buildings

- Written in Machine Code Different pattern each time you play
- Score continuously incremented
- Records highest score and displays at end of game
- Nine levels of play
- Simulated bombs and rockets
- Random amount of building that is destroyed by bomb

PLUS ZX Reflex
Are you as fast as you thought find out with this game

WARNING: This game has proved to be so addictive Micro Gen accepts no responsibility for insanity divorce proceedings, or any other damage so by incurred **Only £4 50 + 40p p&p**

Cheques and POs payable to Micro Gen, Dept VG, 24 Agar Crescent, Bracknell, Berks. Tel: (0344) 27317.

ZX 80/81 HARDWARE/SOFTWARE

ZX KEYBOARD

A full size keyboard for the 80/81. The keyboard has all the 80/81 functions on the keys, and will greatly increase your programming speed. It is fitted with push type keys as in larger computers.
The keyboard has been specially designed for the Sinclair computer and is supplied ready-built. It also has facilities for 4 extra buttons which could be used for on/off switch, reset, etc. **£27.95**

4K GRAPHICS ROM

The dK Graphic module is our latest ZX81 accessory. This module, unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you 448 extra pre-programmed graphics, your normal graphic set conteins 64. This means that you now have 512 graphics and with there inverse 1024. This now turns the 81 into a very powerful computer, with a graphic set rarely found on lerger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there; it also has a spare holder on the board which will accept a further 4K of ROM/RAM. IT NEEDS NO EXTRA POWER AND WORKS FROM YOUR NORMAL POWER SUPPLY. **£27.95**

RAM 80/81

16K RAM
Massive edd-on memory for 80/81.
16K KIT-A-KIT VERSION
of a 16K Ram. Full instructions included. All memory expansions plug into the user port at the rear of the computer. 16K RAM **£42.95** 16K KIT **£32.95**
2K & 4K RAM
Static Ram memory expansion for the 80/81. They both work with onboard Ram i.e. 4K plus onboard = 5K. This is the cheapest small memory expansion available anywhere. 2K RAM **£15.95**. 4K RAM **£22.95**

16K 81 SOFTWARE

As seen at the ZX Microfair.
DEFLEX This totally new and very addictive game, which was highly acclaimed at the Microfair, uses fast moving graphics to provide a challenge requiring not only quick reaction, but also clever thinking. One and two player versions on seme cassette. £3.95
3D/3D LA8YRINTH You hava all seen 3D Labyrinth games, but this goes one stage beyond; you must manoeuvre within a cubic meze and contend with corridors which may go left/right/up/down. Full size 3D graphical representation. £3.95.
CENTIPEDE. This is the first implementation of the popular arcade game on any micro anywhere. Never mind your invaders, etc., this is positively shining, the speed at which this runs makes ZX invaders look like a game of simple snap. £4.95.
Please add £1 p&p for all hardware, Software p&p free. Specify ZX80/81 on order.

CHESS

Last month I demonstrated the use of the *minimax algorithm* which finds a move in any position by looking a few moves ahead and assigning values to each of the positions which can arise at the end of such an analysis. Each "half-move" looked ahead in the *game tree* is called a *ply*. Thus, if White is to move, a five-ply search would examine sequences of three moves for White and two for Black.

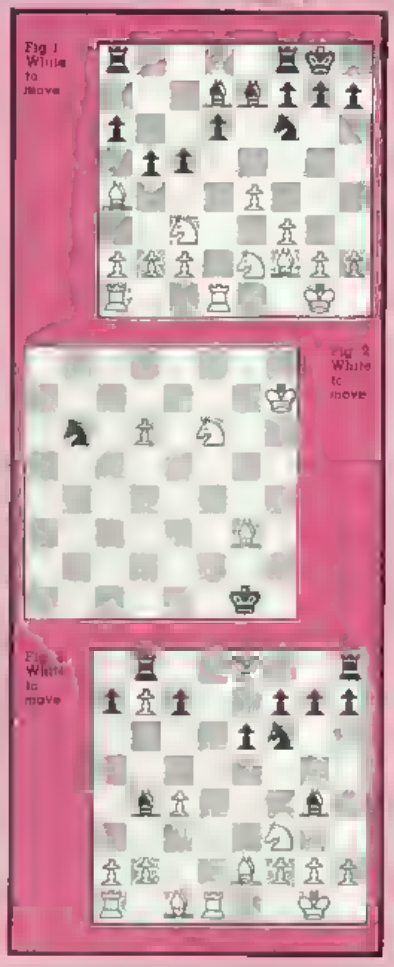
This month I consider the *horizon effect*, a phenomenon which arises because a program is effectively blind beyond the limits of its analysis, i.e. its *search horizon*.

The term "horizon effect" was introduced into the computer chess literature by Hans Berliner, a strong U.S. master and former world correspondence champion, in his Ph.D. thesis which appeared in 1974. However the effect had been noticed as long ago as 1952. I can best illustrate it by quoting — with slight changes — two examples given by Berliner himself.

In figure 1, it is White to move. He is a piece ahead but cannot avoid losing his Bishop. Suppose that White is searching four ply ahead. The program will consider trying to save its Bishop by 1. B-QN3 but after 1... P-B5; 2. P-KR3 (say), PxB, the Bishop would be lost anyway.

Eventually the program would consider 1. P-K5 and recognise that if now 1.... PxB; then 2. PxN is good for White. However, if Black were to play (his best move) 1.... PxP; White would play 2. B-N3 and there would be no way for Black to capture the Bishop in one move. Thus, within the four-ply search horizon, White would have saved his Bishop for only a Pawn!

Of course, this is absurd, since Black could still win the Bishop by 2.... P-B5. All White would have achieved would be to delay the dreaded moment by a completely worthless sacrifice of a



Pawn. However, as far as White is concerned, events more than four-ply in the future do not exist, so it will happily play 1. P-K5.

Unfortunately, after 1. P-K5, PxP, White is again faced with the loss of a Bishop in four-ply. To avoid this, it might consider a further sacrifice by 2. P-B4 or even 2. RxB, but again this could simply make matters worse eventually.

This is the *negative* horizon effect, the attempt to avert some unavoidable consequence. In this particular case, a deeper search would prevent the wrong first move being made.

However, shifting the horizon cannot *eliminate* the horizon effect, just "hury" it more deeply. The second form of the horizon effect, called positive, is more subtle than the negative kind and even harder to deal with. In this case, the program plays an attractive move prematurely when it could be played later to much greater effect.

In Figure 2, it is White to move and the search is being conducted to a depth of three ply.

The program notices that it can play 1. P-Q7 and promote the Pawn next move if Black does not play 1....NxP; then after 2. NxN, White has gained further material.

Unfortunately, this leaves White with only Bishop and Knight to checkmate the lone Black King, very difficult.

If instead White were to play 1. B-K5 followed by 2. B-Q4 White would win the Black Knight without giving up the Pawn, with a simple win based on promoting the Pawn. The program insists on winning material immediately, because if it does not do so within the horizon of the search the gain of material does not exist.

In practical play, examples constantly occur — not necessarily involving any gain of material — where it is much better to delay playing a strong move, following the old adage 'the threat is greater than its execution".

Finally, here is another example of the negative horizon effect from a game between Chess 4.4 and Tree Frog from the Sixth North American Computer Chess Championship (1975)

Figure 3 shows the position after Black's 12th move. White had an indefensible Pawn on the seventh rank. However, since it gave a high value to such Pawns, White tried to save it for as long as possible by playing the sequence 13. P-KR3, B-KB4; 14. P-QR3, B-B4; 15. P-KN4.

These moves delayed the recapture of the Pawn, but only for another few moves and at the cost of ruining the Kingside Pawn structure.

By Max Bramer

american GAMES

PLAIN VIDEO CRAZY

The 25th Consumer Electronics Show, held recently in Las Vegas showed very clearly that one thing continues to dominate the media, and electronics business, in the U.S.A.

This is not the personal computer — which seems to be causing far more interest in Europe than in America — but the video game. Perhaps this is just a reflection of the trend for Americans to stay at home for their entertainment.

After all, with petrol costing all of 99p a gallon, which they consider very expensive, where else can you go! It even costs the equivalent of £1.59 to go to a movie — again a price we British would consider reasonable, but not to our American cousins. So the video game is all the rage.

The two big names that dominate the US video game industry are Atari and Mattel. Both systems are distributed in the U.K. by Ingersoll and Dixons offshoot, ACE, respectively.

Coming up strong is subsidiary of Bally, the arcade people, with a new company called Astrovision.

As they have just signed an agreement with t.T.T. to manufacture a version of the game in Europe we can expect an interesting marketing situation to arise. More from the U.S. next month.

TABLE TOP ACTION

Colece have come to an agreement with a number of the larger arcade game manufacturers to make table top versions of their more popular games.

They are all powered by battery and use multicoloured fluorescent displays.

All games follow faithfully their big brothers in the arcades. Omega Race features a player controlled ship that manoeuvres through space and is in peril from star-like opponents.

PacMan has the usual monster munching its way round a maze.

Donkey Kong features a mischievous ape which kidnaps a girl and takes her to the top of a steel fortress.

Berzerk utilises a joystick control to manipulate a humanoid through a difficult maze whilst being attacked by armed robots.

Frogger (above) involves a frog in a swamp who has 60 seconds to get back to his home. Unfortunately all sorts of things get in the way.

A COMIC LOOK AT GAMING

Not only have Atari announced price reduction on their computers in the U.S. — the 800 has dropped 16% to around £450 but they have also increased the price of some programs.

They explain this increase as a reflection of an increase in manufacturing costs.

A new catalogue of programs from the Program Exchange (APX) has been published and contains over 80 user generated programs.

One of these, Caverns of Mars, was written by a 17-year-old schoolboy and last year's users voted it one of the four top programs.

It has now been promoted by Atari under their own trade name. The player must penetrate several layers of defences to reach the alien stronghold.

Two other new games for the 400 and 800 are PacMan and Centipede.

Atari announced a deal with D. C. Comics for the latter to produce a range of comic books based around the Atari games. The first will be based on Defender, and will be followed by one based on Berserk and Star Raiders.

Finally Atari has shown the prototype of an up-market game system called System X.

FROM CHICKS TO CATTLE

Activision, who scored in the U.K. with the Chicken Crossing the Freeway during Christmas, have brought out four new games that will be distributed in the U.K. by Computer Games Ltd.

Barnstorm is a simulation of the crazy aero acrobatics of the twenties and thirties, Stampede (shown above) is a very good cowboy round-up game with some very deft work on the joystick needed to lasso a cow! Grand Prix speaks for itself.

A new version of a Space Flight simulation will also be with us in the near future.

OUTZAP THE MONSTERS

Bally practically gave up on the video games scene last year but have now rescued the Arcade video computer from oblivion.

Astrovision unveiled seven new video game cartridges which run on the Astro Professional Arcade (formally the Bally Professional Arcade). These are Munchie, which is similar to PacMen, the world's most popular coin-op video game.

The Wizard, who challenges players to team up and outzap attacking monsters.

Cosmic Raiders is a fast action Defender style game in which players raid a sector of the universe to take back stolen Energy Stars.

Solar Conqueror is an Asteroids game. Using warp space travel and other tricks, players attempt to conquer the entire galaxy.

In Space Fortress up to four players jointly defend their fortress against alien spaceships and insane kamikaze fighters.

Quest for the Orb is a totally different and engrossing adventure style game. The object is to find the Orb.

Dangers in your quest include demons, traps, monsters. But you'll be given magical spells and will find enchanted weapons and ancient treasures.

In Pirate's Chase players try to evade a pirate while tricking him out of his treasures.

Colouring Book with Light Pen is a highly entertaining educational and fun game that lets you create multi-coloured pictures on your T.V. screen using built in joysticks or optional "light pen".

Music Maker includes learning and fun. Just move your joystick controls to select a note.

The Arcade Video game can be upgraded to a talking computer system, in the same way as Mattel's Intellivision. The upgrade is known as the ZGRASS 32. The language in the ZGRASS-32 computer is based on an extended Basic that allows animated graphics to be achieved by a non-professional programmer in a matter of hours (see below).

COMBATANT'S VIEW OF SPACE CONFLICT

DUNGEONS AND DRAGONS

Mattel reinforced their top level position with Atari in the TV games centre league — by bringing out 12 new games for Intellivision.

Quick thinking and fast action are needed to play two new games in the space network. It's you against the computer in Star Strike (shown above left). Destroy five missile projectiles on the enemy planet and your mission is accomplished. If you fail, earth is destroyed.

In Space Hawks, you command a space man with five protective "shields". Gain points by destroying U.F.O.s, comets and bubbles as they appear on the screen. The game becomes more difficult as it progresses. Play with a friend or play alone and teleport your man into hyperspace to avoid catastrophes.

In the Advanced Dungeons and Dragons cartridge based on the popular role-playing game avoid the dragons as you attempt to capture the treasure in a computer-controlled labyrinth. Then, carefully return the treasure to your secret room. The game is designed for one or two players.

Control the destiny of your own island in Utopia. Accumulate points by feeding, housing and educating your people, don't let hurricanes or pirates destroy their harmony.

Reversi presents a video version of Othello.

In Night Stalker you control a man in a "safe" room surrounded by a maze containing bats, spiders and a continuing parade of evil robots. Start with three weapons. As the game goes on, your weapons are replenished and the creatures become more difficult to subdue.

Defend your submarine fleet from PT boats, carriers and alien subs in Sub Hunt. Control your sub's speed, depth, direction and torpedo supply.

Two Tron cartridges, based on a concept from the new Disney movie of the same name, provide space-age action. In Tron I, you're Tron, and you use "deadly discs" to fight off the evil blue warrior. Tron II, designed for one or two people, lets you win points by destroying aliens while trying to penetrate the master control program's inner circle.

Pinball is a video version of the popular arcade game — with all the sounds and action of the real thing. The game contains several skill levels as well as surprise trap doors and disappearing flippers.

Designed for the young-at heart, Frog Bog (above) lets you control a frog that can catch flies with its tongue while leaping from one lily pad to another. Don't land your frog in the water — there's a crocodile lurking!

If you are a card player, let Card Fun be your challenging partner. It provides five popular card games: Crazy Eights, Hearts, Rummy, Gin Rummy and Rummy 500. The computer deals the cards and keeps score.

Mattel have also introduced six new hand-held games.

These pocket sized games feature multi-level play and sound effects.

Space Battle gives you a cockpit view of the universe and split second three-colour space action. Destroy enemy craft with twin laser beams on one of four skill levels. You have four minutes to complete your mission and return to base without crashing or running out of fuel.

Combat continues in Armour Battle with tank against tank and tank versus helicopter.

In Formula Racer you're behind the wheel for Grand Prix excitement on four different tracks.

Experience the challenge of American football in Long Bomb Football, a strategy-oriented game with four levels of skill.

Control the attack or defenders in Competition Football, a realistic two player game.

You're caught in a medieval search with Dungeons and Dragons Computer Fantasy. As the Avenger, you must find the arrow and slay the dragon. But beware of flying bats and bottomless pits, or you may become the dragon's next meal.

The Intellivision has now been expanded with a Master Unit that has Basic language and speech synthesiser.

FIND YOUR WAY OUT OF 1,000 MAZES

US arcade firm Entex Electronics has swung into 1982 with four additions to its hand held electronics toy range.

Treasure Quest is a 3D Maze game that uses one of the most complex L.C.D. displays ever developed for a hand-held game. The player is pitted against 1000 increasingly difficult mazes and has the option of facing greater challenges by switching to the adventure mode. Space Invaders is a version of the original game, whilst Select-A-Game is a two player system that can support a whole host of games, such as Space Invaders (right), Basketball, Baseball, Pinball and Football by changing a cartridge and the overlay on the display. A two colour L.C.D. display is used.

Finally, braking, accelerating, steering, passing and pushing your car to the limit are some of the actions on another 3D display game called Grand Prix. Perspective visual effects make it appear that the player is weaving and dodging through race traffic.

ATARI COMES TO TERMS

More Atari compatible cartridge games are being conjured up in America by a new firm in the arena Imagic.

Imagic is also aiming to capture some of the Mattel video games market with new plug-in cartridges. Out now for Atari video computer systems are Demon Attack, Star Voyager and Trick Shot, while Dungeon runs on the Mattel system.

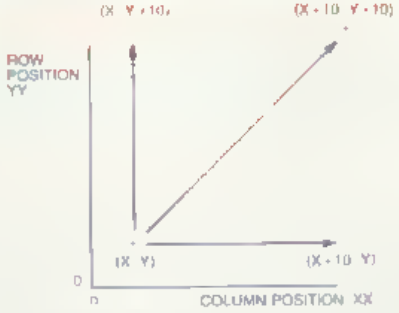
This firm was set up in a similar way to the first outfit to bring out Atari compatible cartridges, Activision. It was formed by ex-Atari people and both companies were fighting lawsuits with Atari to stop the two firms using its expertise.

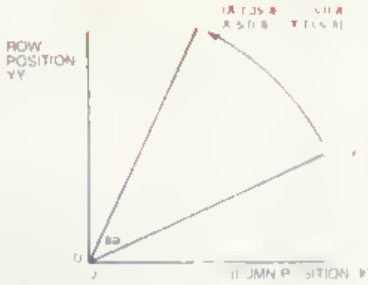
Activision recently settled its differences with Atari and is continuing cartridge production.

BY ROBIN BRADBEER

Graphics

THE SHAPE OF THINGS TO COME





Moving your graphic shapes around on the screen can be a lot simpler than most computer books would have you believe.

A shape can be drawn by joining up a set of points and stored by storing the positions of all these points.

Once a shape is stored, it can be transformed in various ways, like shifting, scaling or rotating it before it is plotted again.

The transformation processes are interesting in themselves, but they also form the basis for many of the more advanced applications involving computer graphics, such as animated graphics and computer-aided design.

With the vertical column positions of the points in the shape stored in an array, XX, and the corresponding horizontal row positions stored in the same order in an array, YY, as shown in lines 30 and 40 of the accompanying program, the shape can be drawn by lines 60 and 70.

Transformations of a shape can be achieved quite simply. Books on computer graphics are inclined to introduce fairly sophisticated matrix methods for transformations, but they can be achieved with the use of arithmetics and some simple trigonometry.

To illustrate this, a shape can be moved to the right by increasing the column positions of all its points by the same amount. The effect on a single point is illustrated in the first figure.

Similarly, movement to the left is achieved by decreasing all the column positions by a fixed amount. Movement up and down the screen is achieved by changing the row positions of all the points in the shape, while a combination of a sideways movement with an up and down movement gives a shift in any other direction to the shape. This is also illustrated by the first figure.

A shape can be scaled by multiplying all the row positions and all the column positions by a constant scaling factor. If the scaling factor exceeds one, the shape is magnified: if it is less than one, the shape is reduced in size.

Rotation is a little more difficult to achieve than shifting or scaling. The location of a point after it has been rotated through an angle, aa, is shown in the second figure. The expression giving the location of the transformed point can be obtained by using the properties of right-angled triangles.

The following program, written for the Acorn Atom in its high-resolution graphics mode, stores and plots a square, and then interactively accepts commands to transform it before plotting it again. The inputs T, S and R, respectively, cause a translation, or shift, a scaling, and a rotation.

Line 130 achieves a shift to the right of 10 columns, a magnification by a factor of two is achieved at line 140, and rotation through 0.2 radians, approximately 11½ degrees, anticlockwise is carried out by lines 150 to 160.

The percentage signs are necessary in Atom Basic to indicate floating point variables and calculations.

The final figure shows a pattern created by shifting and rotating a simple four line shape.

PRACTICAL PRACTICAL PRACTICAL

PROGRAMMING

By TED BALL

TRUTH IS NOT AS SIMPLE . .

Honesty may be the best policy in life but in computing, truth can be the cause of a few problems. George Boole ran into some of these problems in the True and False statements.

Boolean algebra is fundamental to computing and is among the first topics covered in the study of computer hardware and assembly language programming.

Boolean algebra is not often covered in courses on Basic, but because the subject is so fundamental it has applications in Basic programming and most dialects of Basic include the Boolean (or logical) functions AND, OR, NOT.

A Boolean expression has one of the values True or False, and is usually met in Basic in IF ... THEN ... statements.

IF condition THEN statement creates a branch in the program, with a different path taken according to the condition being True or False. The condition is usually a simple expression as in IF A=B THEN ... or IF X$ ="YES" THEN ..., but sometimes a branch will depend on more than one condition and the logical functions provide the means for combining multiple conditions into a single compound condition.

If X and Y are conditions we can form the compound conditions NOT X, X AND Y, X OR Y, whose values are shown in the tables. Note that NOT and AND behave just as in ordinary English; NOT True is False and NOT False is True; X AND Y is True only when X and Y are simultaneously True.

"Or" in English, however, is ambiguous. It may mean one or the other, or both, as in "I don't like cabbage or spinach".

In logic, the first meaning, called "inclusive or" has been taken as OR, while the second meaning, called "exclusive or" is a separate function usually abbreviated as EXOR or XOR.

X	Y	X AND Y
F	F	F
F	T	F

COMPOUND CONDITIONS

We can use compound conditions in IF ... THEN ... statements, for example:

```
100 IF (A>0) OR (B>0) THEN 500
200 IF (A>B) AND (B>C) THEN 500
```

These can be written without the logical functions, as:

```
100 IF A>0 THEN 500
110 IF B>0 THEN 500
200 IF A<=B THEN 220
210 IF B>C THEN 500
220 ...
```

It is often possible to write a compound condition whose meaning is immediately obvious, but is not at all easy to understand when converted to a sequence of simple conditions. For example, it is clear that:

```
100 IF ((A>B) AND (B>C)) OR
((A<B) AND (B<C)) THEN 500
```

tests for A,B,C, being in ascending or descending order, but the equivalent:

```
100 IF A<=B THEN 110
105 IF B>C THEN 500
110 IF A >=B THEN 120
115 IF B<C THEN 500
```

is not at all easy to follow and would probably require some pencil and paper work before its meaning was understood.

Some Basics allow a truth value to be assigned to a variable, for example:

```
10 LET A=(B=C)
20 LET A=(B>0)
```

The actual values assigned to True and False vary but are usually 1 and 0 or −1 and 0. In many cases, although 1 or −1 is assigned For True the BASIC will accept any non-zero value as meaning True, so that

```
10 LET A = 100
20 IF A THEN PRINT "TRUE"
```

would output TRUE when run.

The logical functions may also be applied to numbers and variables, or to a mixture of numbers, variable and relational expressions. For example, LET X = (Y AND (Y>Z)) may be a valid expression. However, the result depends on the particular Basic which evaluates the expression.

In ZX81 BASIC such expressions are evaluated as follows:

X AND Y is X if Y is not 0
0 if Y is 0
X OR Y is 1 if Y is not 0
X if Y is 0
NOT X is 0 if X is not 0
1 if X is 0

This is covered in the ZX81 manual, which gives examples of how these expressions can be used in programs.

Microsoft Basic, which is used in most personal computers, evaluates logical expressions in a totally different way. It requires that the numbers involved be integers between −32768 and 32767 (so that they can be represented in binary with 16 bits), and the result is obtained by applying the appropriate function to corresponding bits. For example, 12 AND 10 is evaluated as 8, because:

12 in binary is 0000000000001100
10 in binary is 0000000000001010;
applying the AND function (as in the truth table, with 1 for T and 0 for F) we get 0 AND 0 = 0 in the first 12 places, then 1 AND 1 = 1,

1 AND 0 = 0, 0 AND 1 = 1, 0 AND 0 = 0. Collecting these together we get the answer 0000000000001000 in binary, which is 8 in decimal.

Negative numbers in binary are represented in a form known as "2s complement". To negate a binary number we change the 0s to 1s and the 1s to 0s and then add 1 (addition in binary is very simple: 0+0=0, 0+1=1, 1+0=1, 1+1=1 and carry 1). For example, to calculate −12:

12 in binary is 0000000000001100
changing 0s to 1s and 1s to 0s gives
1111111111110011
and adding 1:
1111111111110100

To see that this is sensible we can add 12 to −12:

```
  0000000000001100
+ 1111111111110100
 10000000000000000
```

We actually get a 1 in the 17th place, but because we are working with 16 bit numbers this 17th bit is ignored and the result is then zero, as we could expect.

The demonstration program will print out decimal and binary values which will allow you to see how X AND Y is evaluated for any pair of values. The program can easily be altered to work with OR, NOT, or any other logical function.

The program uses most of the features discussed above, and studying how it works should help you to understand the logical functions in Basic.

The 16 bit AND function is used in line 620 to test the individual bits of the number X which is to be converted to binary. P is always a power of 2 and has one bit set to 1 and all other bits 0. Since b and 0=0 and b AND 1=b, whatever the value of the bit b, X AND P will be 1 when X has a 1 in the same position as the single 1 in P, and zero otherwise.

NOW TRY THE PROGRAM

```
100 PRINT " 'AND' FUNCTION DEMONSTRATOR"
110 PRINT
120 INPUT "FIRST ARGUMENT"; A1
130 LET X = A1
140 GOSUB 500
150 IF E THEN 120
160 INPUT "SECOND ARGUMENT"; A2
170 LET X=A2
180 GOSUB 500
190 IF E THEN 160
200 LET X=A1
210 GOSUB 600
220 LET A1$=X$
230 LET X=A2
240 GOSUB 600
250 LET A2$=X$
260 LET X=A1 AND A2
270 GOSUB 600
280 LET A$=X$
290 PRINT A1;"AND";A2;"=";A1 AND A2
300 PRINT
310 PRINT A1;TAB(8);"IN BINARY IS ";A1$
320 PRINT A2;TAB(8);"IN BINARY IS ";A2$
330 PRINT A1 AND A2;TAB(8); "IN BINARY IS";A$
340 PRINT
350 PRINT
360 GOTO 120
499 REM CHECK VALIDITY OF INPUT
500 LET E = 0
510 IF (X=INT(X)) AND (X>=-32768)AND(X<=32767) THEN
    RETURN
520 PRINT " ARGUMENT MUST BE AN INTEGER BETWEEN  32768
    and 32767"
530 LET E = 1
540 RETURN
599 REM CONVERT X TO 16 BIT BINARY STRING X$
600 LET X$ = " "
610 LET P = 1
620 LET B = X AND P
630 LET B$ = "0"
640 IF B THEN LET B$ = "1"
650 LET X$ = B$ = X$
660 LET P = P + P
670 IF P = 32768 THE LET P = -P
680 IF P <> -65536 THEN GOTO 620
690 RETURN
```

SOPHISTICATED STRINGS . . .

The new generation of computers are equipped with quite sophisticated sound facilities.

Last month I dealt with the production of simple tones. With this technique an electronic organ can be set up using the computer keyboard as playing keys.

Computers such as the Sharp MZ-80K contain a simple on-board sound generator which can output notes via a small speaker which is also built in.

Basic commands are provided in the operating system which control the sound generator directly. The system is limited to single notes and covers only three octaves but it is extremely easy to use. A tune is entered into a string variable as a series of notes to be sounded as they appear in the music, A-G.

The octave to be used is marked by a simple graphic symbol and the length of notes by the number 0-9, 0 being a 1/32nd note and 9, a whole note. Rests are entered directly into the string as R.Tempo is set by a Basic statement; TEMPO=, followed by a number.

To play the tune set up in M$, one now enters the Basic word Music=M$ and away it goes! Because the system is resident in Basic, many strings can be set up and played in any order and they can be repeated by enclosing them in a loop. Older generation computers like the Pet and Nascom can all be made to act as music generators in the some way but, because no Basic commands are in-built, the user has to set up his own system. This is now fairly easy as so much software exists which does just that. When we come to discuss the production of more than one note at a time, things obviously become much more complicated. However, this objective can be achieved in several ways.

The computer can be used to control an existing external synthesiser or a specially designed sound generating circuit. Keyboards may also be used with an interface which drives the computer and uses it as a music maker. Such methods might appeal to those with an existing synthesiser but tend to be very expensive indeed.

But what about music actually generated by the computer itself? New computers such as the Dai and the B.B.C. computer are provided with sound generating chips on board which are capable of generating three or four notes at once.

Sophisticated operating systems are included by means of which different sound voices can be used to represent various instruments.

This is helped by a facility which changes the note envelope — the time a note takes to build up, how long it stays at maximum and how fast it decays away.

Music produced by one of these computers sounds bright and lively and has depth and harmony as required. The operating software is complicated but easy to use once it is understood.

The amount of information required by the computer to play even a simple tune is quite vast and the less you know about music, the more user friendly such a program must become. Ultimately it should be possible to enter a piece of music into the computer from a music manuscript without knowing anything about music at all!

The Atari computer is one of those supplied with a built-in sound generator capable of producing four notes at once. Such a provision might be useful to those of us who could write programs to control it.

However, Atari have supplied a software package aimed at music makers and music dunces alike. It is very user friendly and takes the "musician" through the inputting of information in easy stages. A wide variety of control is possible including: key signature, tempo, meter and volume. Music is entered phrase by phrase. Each phrase is remembered and can later be recalled to be played. Phrases can be repeated in a set order. Entering a phrase is done direct onto the screen by using the A-G notation of ordinary music. Accidental sharps and flats, changes of octave, note durations, dotted notes, bars, ties and slurs are all catered for. Once entered, notes can be added, deleted or transposed and the phrase can be played to check how it sounds.

Finally, the whole composition can be played by joining the phrases together. The tune can be monitored on the screen, all four notes will play but only one can be visualised. An experienced musician could find a few faults with the system — like the number of phrases available (10) is very limiting — but on the whole a good example of how to present a complex problem in a simple friendly way.

How can owners of computers which do not have such facilities achieve like results? Well, by using a digital-to-analogue converter such as the ZN425E, or an even simpler resistor network, it is possible to emulate all the above. Things are made much easier by commercial packages which are now available for many computers.

These range from the Alpha Syntauri system for the Apple at a few hundred pounds, to the very versatile and inexpensive Visible Music Monitor for the Pet. The latter is supplied complete with plug-in board containing a D/A converter, filters and small amplifier with provision made for feeding the output to a more powerful one.

Once such systems become available, whole libraries of music soon accumulate on tape and disc contributed to by bone enthusiasts.

BY DAVID ANNAL

EXPAND YOUR VIC

OFFICIALLY APPROVED BY COMMODORE

From £85 plus VAT.

ARFON PRINTER

A low cost stand alone printer which will be almost essential for your larger programs will be launched in the Spring of 1982. The power plug for this unit is already on your expanded system

EXPANDABLE TO 7 CARTRIDGES

You will now be able to use up to seven cartridges to expand from your basic Vic 20. These can include RAM memory expansion up to nearly 30K of usable memory, ROM cartridges with packaged programs, user expansion cartridges, printer software, disc software, RS232, IEEE interface, line expansion firmware and many others – besides of course all your games cartridges

ARFON EXPANSION MEMORY

Immediately available from Arfon in cartridge are 3K RAM + 2 sockets, 8K RAM, 16K RAM 8K ROM, 16K ROM. Also a basic Vic simulator cartridge to allow tape and cartridge use without altering the system

INTERFACES

Slots have been left to allow normal use of the cassette socket, disc socket etc. which will still run normally with your expanded system.

VIC 20 Expansion System

The A[illegible] Expa[illegible] a fl[illegible] unit that integrates your Vic 20 with an expansio[illegible] to seven cartridges and a toroidal power supply t[illegible] to give you sufficient power for any expan[illegible] on and [illegible] w. the Arfon Vic Printer. Your Vic and its screen modul[illegible] - corporated into the expansion system to produce [illegible] nd there is an optional lid that covers the expansion ar[illegible] lows your TV to sit on top. Access to the various input soc[illegible] on your basic Vic 20 is not restricted whi e it is in the [illegible] xpansion unit

Stocks are available now through your own Vic Dealer

I would like to be included on your mailing list.

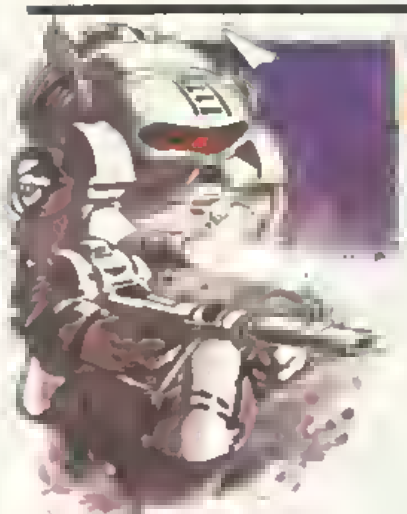
VIDEO SCREEN



WARRIORS FROM THE STARS

SUPER INVADER

Wiping-out alien invaders as they sweep down from the outer galaxies is a tougher job than ever in this souped-up version now on the streets

Super Invader — running on the Interton VC4000 — provides you with a more difficult challenge than the traditional VC4000 invader game

The basic concept remains the same Your role as an intergalactic hero is to save your planet from the onslaught of a race of space warriors whose singular aim is to obliterate all life

The aliens swarm down upon your firing base They start off high in the sky but as the game progresses the invaders descend earthwards, firing missiles at your base

On the right-hand side of the screen is a cloud which slowly but surely fills the action area — growing in regular blocks That spells extra danger.

When the cloud form covers the aliens your missiles become useless So the quicker you blast the invading creatures out of the sky the more chance you have of surviving.

To make the game more treacherous your firing base is stationary so you have to keep alert for alien missiles coming from all angles shooting them down before they get to you.

Super Invader is one of the latest batch of games cartridges brought out by Henimex for the Interton TV games centre and costs about £17 from stockists

HAZARDS ON THE TRACK

GRAND PRIX

Topping the sales list for the Acetronic MPU 1000 is surprisingly, the car racing cartridge Grand Prix.

It's unusual for this type of game to be so popular with games centre owners because space theme games have stolen the show since space invaders was introduced. The fact that Ace supplies its invader pack with the console undoubtedly has something to do with it.

Grand Prix contains 10 different game versions, for one or two players The Grand Prix game itself is first on the list and is simple in concept

On the screen is a straight race track with a car placed at the bottom of the screen. Using the joystick controls you can drive the car to the left or right of the race course

A few seconds after the game has started a fleet of racing cars zooms down from the top of the screen. You have to move your car to avoid the others Be careful not to be over-eager with the joystick, it's very sensitive and if you move it too far to the left or right it will career into the barrier never mind the other cars.

Once you have worked out the technique you can try speeding up the action by moving the joystick forwards, which takes some fine control of the joystick

The second game is Monte Carlo Rally. Again for one or two players the idea is to navigate your car around a race track which is lined with small white posts

The track unrolls before your car revealing hazardous bends and tortuous twists You are given a pre-set time limit to try and have as few crashes as possible

The third game on the package is named Brands Hatch and is the most difficult to master, in fact, I found it almost impossible

Your task is to complete a circuit of a rectangular racetrack which gets progressively more difficult But beware, it's not a piece of cake. I never did get the hang of controlling the car When the flag went up for the off I thought I was doing well — the car was going straight forward Easy I said to myself

Then came disaster. The corner was upon me before I knew it And crash, smack into the barrier. Turning the car left or right presented umpteen problems Actually turning the wheel was easy — it just wouldn't stop turning

So I ended up driving the wrong way crashing barriers on both sides of the course and bumping my way round The only conclusion I drew when I finally put the controls down was that its popularity is because it provides a challenge There are practice versions for you to build up expertise before you attempt the really difficult course

If you want to be thoroughly frustrated Grand Prix cartridges are obtainable from Wembley based Ace for £18 95

IN PURSUIT OF THE ENEMY

CAPTURE THE GENERAL

With a battalion of men under your command you have to try and capture an enemy general

On the screen you see a battlefield with two camps located in opposite corners Dotted across the field are clumps of trees giving you and your soldiers vital cover from enemy fire.

With the joystick you control your general's antics but troop movements are under the command of Colonel Computer!

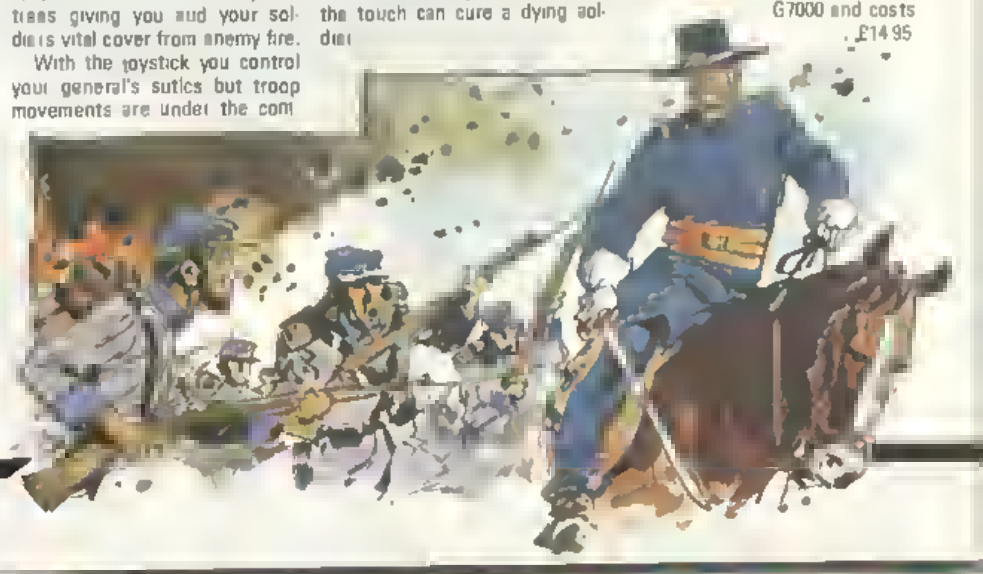
If they get in the way of opposing soldiers they risk being shot.

The generals are luckier. They have extra protection and can resist a bullet shot The generals also have healing fingers, and at the touch can cure a dying soldier

To get your troops to follow you in pursuit of the enemy general just press the action button.

Capturing a general is not easy You must make sure he has no soldiers left to come to his defence

Then you must move your own general close enough to demand his surrender It runs on a Philips G7000 and costs £14 95



VIDEO SCREEN

SEARCH IN THE DARK LANDS

QUEST FOR THE RINGS

Begin an adventure in lands inhabited by weird creatures in a new concept in video games combining a board and the television

Featured in Philips G7000's Quest of the Rings are a handful of characters and monsters which the player — or players — encounter and have to deal with.

In principle the game is similar to most adventure games. The player takes the role of a small band of legendary heroes. The difference is that you also have a board to work out your strategy of play.

Their job is to search for 10 rings which hold a hidden power but which are concealed in the Dark Lands guarded by a malevolent Ringmaster

Eating out of the palm of his hand are several slaves who are equally vicious. In their power and ready to injure or destroy you at the slightest provocation are Orcs and Firewraths, the spider Spydroth Tyrantulus, the Doomwinged Bloodthirsts and firebreathing dragons.

The odyssey takes you through dungeons, crystal caverns with invisible walls and the shifting halls which change position every few seconds.

Using the board to place your figures representing whichever role you decide to play, you can work out the best plan of action. On the board itself is a map of the Dark Lands revealing the surrounding seas and the dangerous areas you have to traverse

At the same time you can see the action as it takes place on the television screen

More than one player can join in the Quest for the Rings, each taking a different character, ranging from a warrior — when you own a magic sword — a wizard who has the power to cast spells on monsters, a mysterious phantom who can walk through walls with ease, and finally a changeling, who has the advantage of wearing an invisible cloak

Quest of the Rings comes with a keyboard overlay which is used for locating places marked on the map of the Dark Lands, as well as areas where dangerous beasts lurk By pressing that part of the keyboard you will be instantly transported to the selected area

Exactly when Quest for the Rings will be on shop shelves in the U.K. is still undecided, but Philips hope it will be readily available within a couple of months' time. The price has not been finalised but **Computer and Video Games** will keep you posted

MASTERING THE MAZE

SUPERMIND AND LABYRINTH

You get two games for the price of one in one of the latest Philips G7000 cartridges, Labyrinth and Supermind

In Labyrinth you must move a pawn through a concealed maze and find the exit within a set time limit. Sections of the maze are revealed as you travel through it. But take care to move your pawn in the middle of the path. If you don't the pawn's movement slows down.

There are 16 variations of this game on tap and each one consists of ten mazes for you to work through before you win

Options include mazes which move and change as you go. This means your pawn could get boxed in thereby ending the game.

One to really fox the addict is when exits change position. Then you have to make sure you act quickly and don't get caught up in the maze The speed of the game can be altered too

One of the most frustrating variations is when a cat is hidden in the walls of the maze. If you are unlucky he will leap out and gobble you up

If you don't find that taxing enough then turn your talents to Supermind, an improved version of the old favourite Mastermind. There are multiple skill levels in Supermind

The object of the game is to break the code set by the computer — but you are limited to a certain number of guesses The code is represented by symbols which can be any one of 47 labelled on your G7000

To let you know how close you are to cracking the code the computer brain shows a red figure from one to four corresponding to the correct symbol of the code

Either tackle the computer's brain or take on a friend. As an alternative you can also take turns with a friend to complete a guess set by the chip

A copy can be obtained from G7000 stockists for £14.95

ATLANTIC CROSSING

COCKPIT

Ever wanted to fly a Jumbo jet? Now the controls of this huge aircraft can be at your fingertips.

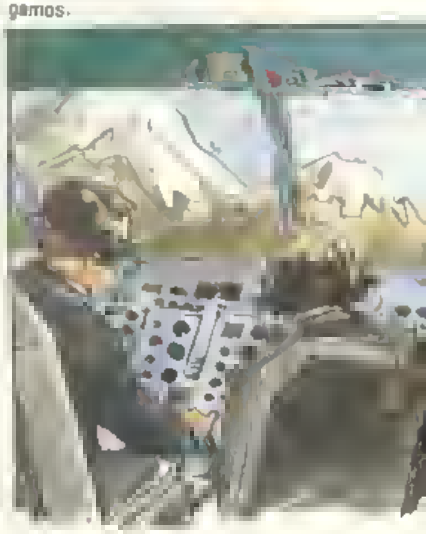
Your job is to pilot the jet on a flight across the Atlantic and to execute a successful take-off and landing

You have in front of you a display of the dials and pressure guages necessary to fly the jet

The joystick controls are used to manoeuvre the Jumbo Take care not to fly too low, it might crash into the side of a mountain.

Cockpit runs on the Interton VC4000 video computer centre which is available from selected UK dealers The console itself retails at just under the £100 mark, but prices vary depending on the supplier

The Cockpit cartridge will sell for about £22.95 — more expensive than most others in the range but the distributors Henimex claim it is more sophisticated than previous simulation games.



DOWN TO BASIC

BY MOIRA NORRIE

THE POWER OF IF . . .

"If", so the saying goes, is one of the most powerful words in the English language. And the same is true of the Basic language.

Last month, I introduced the IF statement with the example:

```
10 IF RND<0.5 THEN 40
```

I explained the operation of this statment as follows:
if the condition RND<0.5 is true, then the computer will "jump" to line 40;
if the condition is not true, then the jump will be ignored and the computer will continue with the line following the IF statement.

In general, an IF statement will have the following format:
⟨line number⟩ IF ⟨condition⟩ THEN ⟨line number⟩

The method I have used for describing the general format of the IF statement is commonly used in programming. The parts enclosed in angular brackets, e.g. ⟨condition⟩, are descriptions of what should be placed in that part of the IF statement. The parts not enclosed in angular brackets, e.g. IF, indicate exactly what must be placed in that part of the IF statement.

The first line number is simply the line number that must appear at the beginning of every line of a Basic program. The second line number is the number of the line that the computer will "jump" to if the condition specified is true.

What sort of conditions can be tested for in an IF statement? A condition will involve the comparison of two arithmetic expressions. In my earlier example, the value of "RND" would be compored with the value 0.5. If the value of "RND" turned out to be less than 0.5, then the condition would be realised.

Using the method described above, I can give the general format of a ⟨condition⟩ as:

⟨arith. expr.⟩ ⟨relational operator⟩ ⟨arith. expr.⟩

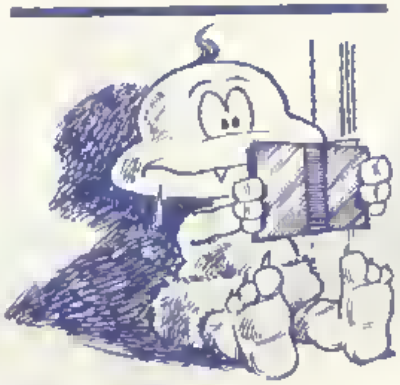
A relational operator is a mathematical sign used when comparing two values and can be one of:

```
<    less than
<=   less than or equal to
>    greater than
>=   greater than or equal to
=    equal to
<>   not equal to
```

To illustrate these formats, I will now give a selection of examples of IF statements. (Note that each line is a separate example and this is not intended to be considered linked in some way as port of a program!)

```
30 IF X=O THEN 120
90 IF A+B <=C+D THEN 10
85 IF INT(6*RND+1)<>6 THEN 20
```

Notice that, as a result of an IF



statement, the computer may "jump" either "forwards" or "backwards" in a program — it will simply jump to the line specified in the IF statement, wherever that might be.

Many version of Basic allow more advanced forms of the IF statement. Rather than "jumping" to another section of the program if the condition is true, it may be possible to specify a simple action to be performed, e.g. printing a message. In some versions, it is possible to specify alternative actions to be performed depending upon whether the condition is true or false — all within a single IF statement. These forms will be discussed later in the series.

JUMPING TO NEW LINES

The GOTO statement, also introduced last month, takes the general form

⟨line number⟩ GOTO ⟨line number⟩

Again, the first line number simply labels the GOTO statement. The second line number specifies the line to which the computer should jump. The GOTO statement is referred to as an "unconditional jump" as the jump will always take place. On its own, the GOTO statement is not of much use. However, used in conjunction with the IF statement, it can be used to set up alternative sections within a program.

SOLVING A PROBLEM

By looking at a simple example, I will demonstrate the steps involved in writing a program. First, let's look at the problem.

"In a sponsored walk, each entrant is given a number in the range 1 to 100. The entrants are all sponsored at a rate of 25p per km for the first 15km, and 50p per km beyond that. Write a program that could be used to print the amount earned by each entrant."

I can start with the general program outline:

```
repeat for each entrant
    input data
    print results
end repeat
```

For each entrant, I will need a poir of data values — the entrant number and the distance walked. The statement of the problem specifies that the entrant number will be in the range 1 to 100 and, clearly, the distance walked must be a positive number. However, it is not stated whether that number must be an integer, or, if it can be any real positive real number e.g. would the poir of values 25,12.5 be acceptable? I will assume that real numbers are acceptable, but, strictly speaking, I should say that the statement of the problem does not

provide all the information required!

Now that I have decided upon the format of the data for each entrant, I will require some way of determining when the end of the data is reached so that the computer will repeat the "loop" the correct number of times. If I knew that there were to be exactly 100 entrants, then I could use a FOR loop to control the number of times that the loop would be repeated. But we do not know exactly how many entrants will take part.

Although the statement of the problem says that each entrant will have a number in the range 1 to 100, there is nothing to say that there will be exactly 100 entrants. In fact, a sponsored run would involve someone in a lot of counting to determine how many turn out. It is easier to keep typing data until there is no more; then type in some preset value which will stand out from the normal data, so that the computer will stop looping. This special value is called a "terminating value" since it marks the end of the data.

In most practical situations, some value can be found which would never occur in the data for processing. For example, in the case of the sponsored walk, an entrant number of -1 would never occur — we could therefore use this as a "terminating value". As I will input pairs of values in the program, I will also provide a "dummy value" of 0 for the distance walked by "entrant number -1".

THE GENERAL OUTLINE

I can now develop the general program outline as follows:

input entrant no. , distance walked
if entrant no. = -1 *then* (end of program)
    print amount earned
    goto (input data)
end

How can I calculate the amount earned by an entrant? Assume that the entrant no. is N and the distance walked is D, then the amount earned by entrant N will be determined by:

if D < 15
    then amount earned = D*0.25
    otherwise
        amount earned = 15*0.25 + (D-15) *0.5

where the amount earned is in pounds.

AND FINALLY — THE PROGRAM

Having developed the outline of my program, I am now in a position to write the program itself.

```
 10 REM SPONSORED WALK
 20 REM N IS THE ENTRANT NO.
 30 REM  D  IS  THE  DISTANCE
    WALKED
 40 REM
 50   PRINT  "WHAT  IS
      ENTRANT NO. AND DIS-
      TANCE WALKED"
 60   INPUT N,D
 70   IF N=-1 THEN 130
 80     IF D<15 THEN 110
 90        PRINT 15*0.25 +
           (D-15)*0.5, "POUNDS"
100        GOTO 50
110        PRINT D*0.25 ,
           "POUNDS"
120        GOTO 50
130   END
```

If your computer does not use END statements, then replace line 130 by 130 STOP

The STOP statement is similar to the END statement in that the program will stop running when it is encountered. However, unlike the END statement it does not have to be the last statement in a program — it can occur at any point in the program.

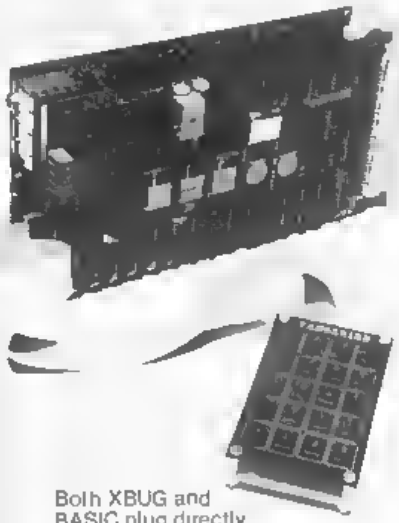
The above program could be improved in many ways. For example, the results would be a lot clearer if they were printed in a table rather than being mixed in with the input data.

NEXT ISSUE
MORE INPUT

In the program for the sponsored walk, the data for each entrant consisted of a number followed by the distance walked. It would be convenient in such a situation if the name of the entrant could also be input so that it could be printed next to the amount earned for easy identification. Next month, I will describe how this can be done using "string variables".

NEXT ISSUE

Step by step with the computer system designed for tomorrow.



Microtan 65

£79·00 +VAT Ready Built

£69·00 +VAT Kit

* 6502 Microprocessor
* 2K Monitor TANBUG
* Intelligent socket accepts keypad or full ASCII Keyboard
* Chunky Graphics and Lower Case Options
* Connects to unmodified B/W or Colour TV

For the first time buyer or experienced user, Microtan 65 is a superb route into personal computing. If you are looking for a sophisticated machine with the capability of expansion into a professional system, then this is the computer for you. Step by step with the computer system designed for tomorrow.

6502 Microprocessor

Probably the most popular CPU (central processing unit) for personal computers, having a powerful instruction set and architecture

2K Monitor TANBUG

The built-in 'mind' of the machine. TANBUG controls all system functions and gives comprehensive machine-code facilities. Functions include:- set and clear breakpoints, single step through program, execute program, copy block of memory, modify memory locations and much more

Intelligent keyboard socket

For absolute beginners we can supply an easy to use 20-way Hex keypad; for the more experienced user there is a full typewriter style ASCII keyboard. Either way, Microlan will work out exactly which type you are using and act appropriately

Chunky Graphics Options

For drawing simple lines and graphs,. or for animated games, Chunky Graphics is a low cost answer. This set of chips plug into the Microlan board and allow graphics to be built up on the screen at a resolution of 64 rows by 64 columns

Lower Case Option

To extend the character set to 128 characters, allows for real descenders on lower case characters and a set of extra symbols and characters for simple graphics

Microtan Accessories

20-way Hex keypad MPS 1 Basic power supply

Aerial connector lead

Full ASCII Keyboard MPS 2 Full system power supply

Mini — motherboard

Microlan is available ready-built or as a kit. We recommend that you should have some soldering experience before attempting the Microlan Kit, although if you do run into problems you can make use of our "Get you Going" service (telephone for details)

TANEX

* 7K Static Ram
* 10K Microsoft Basic
* 32 Parallel I/O lines
* 1 Serial I/O port
* XBUG
* Cassette Interface

The first step in expanding your system. Tanex provides the extra facilities necessary for the serious programmer. Memory expansion: Tanex has provisions for up to 7K of static RAM and up to 14K of EPROM using 2716 or 2732 chips.

XBUG and BASIC

XBUG is a 2K extension to TANBUG that contains a mnemonic assembler and disassembler and cassette firmware running at 300 Baud CUTS, standard or high speed 2400 Baud Tangerine standard with 6 character filenames. Tangerine have taken out a full O E M licence for Microsoft BASIC, the microcomputer industry standard. This is a full feature implementation with interrupt and machine code handling, and a superb program editor.

Both XBUG and BASIC plug directly into Tanex and are supplied with comprehensive user manuals.

Parallel I/O

When fully expanded Tanex includes two V I A s (Versatile Interface Adaptors) which implement the cassette interface and the parallel I/O ports. Software in TANBUG V2.3 enables you to plug in and use a Centronics type printer. The two V I A s also contain counter timers that can be used for a variety of applications enhanced by the use of the integral handshake facilities

Serial I/O

Also on the expanded board is a serial I/O port that can be used to interface RS232 or 20Ma loop terminals or VDU's, again all controlled by TANBUG V2.3.

Tanex (Min Config) Kit £50.95 inc VAT and P & P
Tanex (Min Config) Assembled £82.45 inc VAT and P & P
Expanded Tanex Kit £104.66 inc VAT and P & P
Expanded Tanex Assembled £116.15 inc VAT and P & P

Brainware

MIND ROUTINES No. 5

Using all the odd digits 1, 3, 5, 7, 9 how many 5 digit prime numbers can be made? What is the highest and the lowest prime? What is the total of all the primes that can be made?

● The winner of our January Mind Routines puzzle was Graham Taylor of Lawn Avenue, Peterborough and the first correct Nevera Crossword entry out of the hat came from A. Still of Durweston Close, Bournemouth. Bottles of champagne are on their way to both winners.

The answers to our February issue's puzzles are on page 16.

NEVERA CROSSWORD

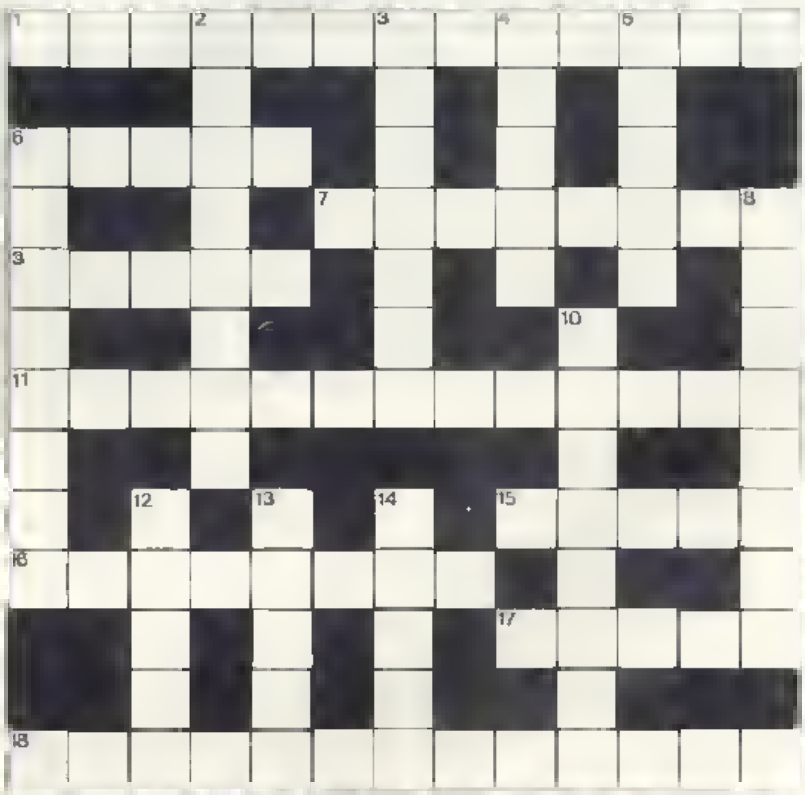
ACROSS

1. Kid David rules over computer storage device (4,4,5)
6. Move to give a higher case (5)
7. Encompass the video game (8)
9. School game (5)
11. Quite plain like the chess board (5,3,5)
15. Computer's words which contain adventurer's equipment (5)
16. In which to send off the music program (8)
17. A hundred and six balls in cricket failsafe (5)
18. Soccer player with inborn ability to torment 2 (7,6)

DOWN

2. Soccer player stranded at the start (4,4)
3. Endlessly set up a single attack (3,4)
4. Opening Fortran for equivalent with alternatives (5)
5. Get data for the Basic program from thin putty (5)
6. Twisted British Rail cables makes board game (8)
8. 2's favourite (8) video game?
10. Display clues like this, the gunfight at the O.K. Corral for example (8)
12. Happening to be the first woman in the Old Testament on the New Testament (5)
13. Change a vital terminal piece (5)
14. For — Next structures put up for what one might do with printer output (5)

Two bottles of champagne are up for grabs on this page every month. The first correct answers out of the hat for both the Mind Routines problem and the crossword on 14 March will have bottles of champagne rushed to them. Ian Pedder's Mind Routines problem will test both your ability to think through a puzzle and set it out as a program. If you are more literary minded try Nevera's Crossword and see how you get on.



● For details of *Computer and Video Games* competition rules see Page 16.

Kit Korner

CIRCUIT TRAINING

Over the next two issues I am going to move slightly away from actual kit building, to look at prototyping your own designs or those that you may find elsewhere.

It is helpful to know from the very beginning which is the best way of developing your ideas into a working circuit.

Depending on the complexity of the circuit and its function there is an ideal means of construction. There are, of course, other factors to consider, such as cost and availability and also how involved you want to get. I will try to cover all the methods [illegible] two obscure types I will miss.

Many years ago I built a bridge rectifier with a dropper resistor on a group panel. It was very crude but as I had to dissipate a lot of heat it was an ideal way as I could hang the strip of high power diodes and resistors in a draught to cool it. The group panel, by the way, is simply a parallel line of solder tags formed onto a piece of insulating material.

The next stage up is probably the matrix board. This is just a piece of insulating board with an array of holes, of various dimensions set 0.1in. apart, into which pins are inserted. By drawing [illegible] circuit out on paper you can arrange the pins at the point of each join of the components. For complicated circuits the components can be arranged on both sides of the board.

Please do not make the mistake of wrapping the component leads around the pins as it makes it extremely difficult to unsolder them later on, if you need to redesign the circuit or re-use the components. A simple lap joint will do. Also, take care not to push the pins in too far as you will fracture the board. If the board is to be well used, a drop of solder on the underside of it will prevent the pins from working loose.

If chips are included in the design you are strongly advised to use holders, which conveniently fit into the 0.1in. pitch holes. It should be possible to bend the legs of the holder outwards to be soldered to pins inserted along the side of the chip. This secures the holder onto the board.

When you come to making connections across the board, between pins, it is advisable to use insulated wire of different colours. It makes it much easier to follow the circuit if you can use particular colours for each line of the design, not only for power lines, but for data lines as well. This applies to all types of construction as a few circuits will be impossible to trace unless they are colour-coded.

Up market from the matrix board, in some respects, is the stripboard. Like the matrix, the stripboard is just a variable array of holes, set at 0.1in. pitch in an insulating board, but with a very distinct difference. On one side of the board are bonded strips of copper conductor. The components can therefore be soldered onto the board without the use of pins, although these are useful as terminal and test points.

Care must be taken to cut the tracks in the right places. Drawing the circuit out on, preferably, 0.1in. graph paper will help you sort out the layout. A special track cutter is available but a drill bit will do just as well. If necessary, components, can be laid along the tracks, so long as the track is cut between the leads. Yes, it has happened that all the components have been laid along the tracks without them being cut. For some reason the circuit did not work!

Make sure that the chip holders, if they are used, are laid across the tracks and that the tracks are cut between the pins. Again, the use of a drawing or diagram would be helpful.

Until you become proficient at designing board layout you will always use more board than you really need. This is unavoidable

to begin wi[illegible] to overcome this proble[illegible]ghtly, try to redraw the circuit a few times on paper as you intend it to appear on the board. It will give you some experience in alternative design, if nothing else, and you may discover a more rational layout.

Next month I will endeavour to deal with wire-wrapping and the use of Eurocard type circuit boards. Unlike the two types of board mentioned here, which are discrete component orientated, the Eurocards are biased towards circuits with large numbers of chips. See you then.

BY KEITH MOTT

REVIEWS

RUBIK'S CUBE UNLOCKED

COMPUTER CUBE

For those of you who have never heard of Rubik's Cube, apply to the Guinness Book of Records and move to the next review. For the rest of you, here is the computerised cube!

This program not only solves the cube as you watch, but also lets you play with the cube yourself.

Since I have never yet solved a cube, watching the computer solve it, is both interesting and demoralising.

The standard of the display is exceptional. The screen presents you, in colour, with a 3-D view of your cube, a view of each of the six sides, a view of the side to be turned showing position before and after the turn, and all the moves made so far in normal cube notation.

The instructions are short and clear, but do require reading fully before using the program. To enter the state of the cube you have been trying to solve for weeks is simple, just key in the colour of each position on each face. The program prompts clearly and a seven-year-old had no problem with it at all.

How much you enjoy the program will depend on how much you like the cube. As an alternative to the cube there are certain disadvantages — you can't easily throw it at the wall quite like a regular cube!

As an example of how easy to use a good program should be, I place it top of the list. It runs on a 48K Apple under DOS 3.2 or 3.3, but supplies and price are not yet finalised in the U.K.

DILITHIUM DILEMMA

BEAM ME UP SCOTTY AND SPEEDWAY

The starship Enterprise lies stricken in space in the game Beam Me Up Scotty.

Your job is to collect as many new Dilithium crystals as possible from a planetary surface by beaming down an ensign, steering him to the flashing crystal and returning to the beaming-up point. His movement is controlled with the cursor control keys.

If this sounds simple, then you haven't reckoned with the randomly placed obstacles and man-eating monsters, who roam the surface. To make things worse, these monsters are sometimes invisible! Occasionally, your man panics, and it can take both skill and luck to prevent him running into a monster or obstacle.

The comprehensive instructions are very well presented within the program, and imaginative use is made of the graphics. The program runs on a 16K Nascom 2 with ROM Basic and graphics, represents good value for money at £5.00, from Futura Software of Chelmsford.

On the same tape comes Speedway a racing game for up to three players, including a one player practice mode. The object is to try and complete as many laps as possible before crashing into another player, the track boundary, or one of the hazards which appear at random. Varying road conditions and hazard difficulty level are selected at the start of the game.

The controls are difficult to get used to — each player has two keys to steer in four directions — and the bikes are slow to respond to changes in direction.

With three players on the track, it is a challenge to complete even one lap!

As with the former program, the graphics are good and full instructions can be printed at the start of the game. Speedway also costs £5.00 and runs in 8K on the Nascom 2 with ROM Basic and graphics.

SNAPPING UP A MINOTAUR . . . AND SAVING BABIES!

SNAPPER MINOTAUR, BABIES

This is the ninth and probably the best games pack from Acornsoft so far. All the games on this cassette use graphics and sound effects to the utmost showing just what can be achieved on the Atom through skilful programming.

The first game, Snapper, is a variation of the arcade game "Mazeman", mentioned in the November issue of Computer and Video Games However, the game has been simplified to fit it on a standard Atom.

These simplifications include changing the "ghosts" and your man into circles (they are in fact in colour if you've got the colour encoder board fitted), and the simplification of the rules (you don't get fruit in this version).

If you haven't seen the arcade version of the game, then here's how to play The basic object of the game is to eat as many ghosts as you can while your mouth is open (if your mouth is shut when you catch one, it eats you!).

To open your mouth you must go over one of the corner crosses Then you have a limited amount of time before it shuts again. The graphics are good and are backed up by excellent sound effects

The second game, Minotaur has impressive graphics too. The object of the game is to take all the gold bars from the boxes scattered around the maze and to put them in the safe while trying to avoid meeting the minotaur who tries to catch and eat you All this is done with 3-D pictures of the passages and the various objects in them However, if you get completely lost, then you can call up a map of the labyrinth telling you where everything is

You can also mark the floor with a big cross so that you can remember where you've been The game is very difficult to win and it ends either when you have put all five bars in the safe, or when you have been eaten by the minotaur. The scoring for this game is to put it mildly, odd, since you may often end up with a negative number of points

This game also has sound effects telling you how far away the minotaur is — he growls when he gets close When eaten, the minotaur just sits there in front of you smiling and winking He doesn't actually look too convincing but that's only a small point which doesn't detract at all from the excellence of the game as a whole.

The third and last game Babies, is an exact copy of the hand held game with the LCD display in which babies jump out of a burning building. You must catch them on your stretcher and bounce them off the end of the screen before they fall to their deaths. Three are allowed to die before the game ends

This games pack is excellent value for money and I was very tempted to play the games rather than write the review!

These games should be available from Acornsoft at the price of £11 50 for the cassette

HARD

ROOM TO GROW

The Atom uses the 6502 microprocessor which is the same chip used in the Apple Pet and the BBC microcomputer

Memory capacity starts with a minimum of 1K RAM which can be expanded to 12K by adding chips Expansion to 32K is achieved by adding an extra Eurocard inside the Atom case and then you have to buy a 15in rack which is expensive

ROM starts at 8K and goes up to 16K on board, with extra expansion available as with the RAM chips

The power supply needed to run an Atom is eight volts at 800 mA each for the minimum system Acorn can supply the power unit which feeds the internal regulator For the maximum system you need an external regulator supply.

A cassette interface port allows you to connect a cassette recorder for loading and storing information, and a printer output port for attaching a printer

The Atom has sound capability via a loudspeaker which allows the generation of tones of any frequency

The Atom is made by Acorn Computer Ltd. and is available in kit form or ready built.

Direct from Acorn it costs £174 for the 2K assembled or £140 for the kit. A "full" Atom has 12K memory and costs £282 from Acorn.

It is designed to plug into a television set and the Atom comes complete with Basic manual, U.H.F. television lead. A power supply (cost £10.20) and a cassette lead (£1.50) are important extras.

The machine, which was launched in mid-1980, has proved popular with games players because of its high resolution graphics but also has business and educational applications.

Hardware and software is available from Acorn Computers and its associated company Acornsoft, which shares its address of 4a Market Hill, Cambridge CB2 3NJ. The prices quoted above are Acorn's, but its large dealer network will sell the equipment much cheaper.

GAMES PEOPLE

Independent software supplies have not been slow to support the Atom and a large range of games is available for the machine

Acornsoft produces 12 games packs which contain three games on each cassette and costs £11 50 inclusive of VAT

The company claims to be able to turn any arcade craze into an Atom game in a matter of months One example is the game of Snapper, which recreates the popular Pacman game This shares a cassette with Minotaur and Babies

Also available are three Atom adventures and a chess playing program

Among the other Atom games software suppliers are

- Program Power (5 Wensley Road, Leeds LS7 2LX) has a range of about 30 games, from adventures to the arcade type Astro Blitz, Invader Force and 3D Asteroids are its best sellers
- Bug Byte (98-100 The Albany, Old Hall Street, Liverpool L3 9EP) offers some 19 games, including the arcade and simulation-type 747 is a flight simulation program which along with Invaders and Galaxian, is its most popular cassette
- Hopesoft (Hope Cottage, Wintarbourne Newbury, Berkshire) at present has six games concentrating more on the adventure type Of the arcade variety it offers an elementary Pacman game called Chaser and Space Invaders Atom Adventure is its best seller
- A & F Software (10 Wilpshire Avenue, Longsight, Manchester M12 5TL) produces four games for the Atom of the interactive type A radar game, Early Warning, is its most successful.
- Team 4 Software (12 Taunton House, Redcar Road, Harold Hill, Romford, Essex) offers Space Invaders and Shapemaker, an etch-a-sketcher which enables you to draw and store your own graphics,
- Computer Concepts is at 16 Wayside, Chipperfield, Hertfordshire. It produces a small range of software for the Atom including Invaders, a sound effects program, an alarm clock program and a program to increase the number of text lines and characters on the screen.

GOOD GRAPHICS

The Atom manual contains all the information necessary to produce your own graphics and sound for games playing

Graphics capabilities depend on the memory available A minimum Atom has 1K of V D U RAM, half of which is used for storing text. But this can be expanded up to 6K V.D.U. and 5K text space which is the maximum configuration on the board The Atom has nine graphic modes dependent on memory

Mode	Resolution		Memory
	X	Y	
0	64	48	5K
1a	64	64	1K
1	128	64	1K
2a	128	64	2K
2	128	96	1 5K
3a	128	96	3K
3	128	192	3K
4a	128	192	6K
4	256	192	6K

X is the horizontal axis and Y the vertical

The "a" modes refer to colour which requires the floating-point ROM and the colour converter board — about £20 each

The highest mode is more than adequate for reproducing arcade type games and the more sedate displays required by strategy games For example Acornsoft has designed a version of Kensington which fits on the Atom screen

Sound is available from a single bit on an output port and the user must write a machine code program to generate noises — very easy as the Atom has built-in assembler — the manual contains a machine code program to impersonate a harpsicord

Volume and quality from the internal speaker leaves a lot to be desired, however the sound output is available on one of the pins on the din socket which the cassette uses A seven pin din plug will connect it to an amplifier

BASIC PROBLEM

One of the main criticisms levelled at the Atom by other computer users, is that its Basic is very different from the Microsoft Basic

Among the peculiarities are the operations to carry out print formatting, floating point arithmetic and string handling

You can also use abbreviations for the most widely used command words The string handling commands are also unusual — again to conserve memory space and speed up the string manipulation operation

The Atom has an in built assembler which enables you to produce machine code programs. Machine code can also be placed into memory and assembler statements be made part of a Basic program so that it returns control to Basic after the machine code has run.

Owners of the fully expanded Atom can take advantage of the Atom Forth implementation. The Forth language is a programming language which can be implemented on microcomputers and offers high-level ways of solving a wide range of problems

It is a compiled language and programs run very quickly when you use it The cassette contains a Forth dictionary and compiler, a tape interface/screen editor, a graphics package and a high resolution graphics demonstration

Pascal can be used with the Atom but you need extra memory to link it in with either the System 2 or 3

The Acorn Pascal package includes a compiler, an editor and an interpreter and an in-line assembler for programming critical routines

The List Processing Language (LISP) can be used on the Atom but this language is usually used when working on research programs rather than production programs

CORE

OPTIONAL EXTRAS

A variety of peripherals are available for the Acorn, both from Acorn and other specialist firms.

The Atom was designed as a cassette based system, not as a disc-based one but in the near future Acorn is to bring out a single disc drive unit which should cost around the £200 mark

Acorn claims any cassette recorder can be plugged into the Atom and used to save and load programmes but the more expensive the recorder the better the performance

Acorn markets a printer which will produce hard copy from the Atom. It is called the GP-80A and sells for £232. The GP-80A is a dot matrix printer and provides characters printed in single and double widths, also graphics.

The 2K system needs the Atom printer drive chips which fit inside the machine's casing These retail for £11 Having expanded the Atom you need a wire link from pin 17 of the 8255 chip to pin 17 of the printer connector

There are no joysticks on sale for the Atom but Atari joysticks can be converted A booklet on the subject can be obtained from Burgards, 32 Gulthavon Road, Witham, Essex The £2 50 12 page booklet also contains some Atom games programs

Additional memory boards can be bought from Acorn or Basildon-based Timedata which specialises in the Atom

You can get 1K RAM sets from Acorn for £11 22 each (shop around as these come a lot cheaper) and a 4K floating point ROM for £23 00. If you buy the 12K Atom it comes with the system An 8K memory card is also available It is connected inside the Atom and costs about £50

Timedata supplies a 16K add-on RAM for £59 50 and a 32K RAM board for £74 00

A 64K dynamic RAM card can be connected inside the Atom It is made by Audio Computers of Southend and is available from the manufacturers or Technomatic of 17 Burnley Road, London NW10

Extra memory is not usually required for playing games on the Atom but is usually needed if the user wants to build up a large database of information. According to Acornsoft all of the games software runs perfectly on a 12K Atom

The user port on the Atom is similar to the Pet's (8 bit) so any peripheral advertised for the Pet user port can be connected to the Atom You will need to make an adapter lead up and change the software — most manufacturers will make these alternatives available

One interesting aspect is a voice synthesiser available from Wide Band Products of Royston, Herts Its Speakeasy unit with power supply unit and speaker for £69 (plus VAT) will connect to the Atom

The Atomtel facility allows users to access massive mainframe databases via the information service Prestel. The Atomtel ROM plugs into the Floating Point ROM socket (£30), you also need a modem and Isolating Unit (£70) and a PSU + cables (£20).

A few of the Atomtel facilities are Auto Dial, Auto log-on, full Prestel character set and provision for down-loading software

A USER'S VIEW

I bought the minimum kit Atom for about £130 from one of the dealers

Being a dab hand with a soldering iron it took me a long evening to construct but it's not hard for beginners because the construction manual which comes with the kit version only is quite comprehensive

The keyboard is a problem so take care, but the grapevine says that a new keyboard will soon be used

I had toyed with a Pet previously so I was slightly perturbed by the reports of Atoms peculiar Basic but within a week there was no problem

The Atoms' 'idiosyncratic" approach to PEEK-ing, POKE-ing print formating and string handling is not only more compact than other methods, but more logical

The floating point arithmetic is a bit complex because one has to prefix with "F" But you soon discover the speed advantages of Integer and only use Floating Point when you need to

The extra 21f4s and VIA 6522 come next and I had a fully expanded Atom and my wallet didn't notice The beauty of the Atom is that you slowly build up and eventually you've got a hard disc-based system, with colour, Prestel, Atomtel, BBC Rom set, Wordpack, Printer, Econet and speech

And finally, one tip for those who intend to get serious use out of the Atom Buy, build, borrow or steal a 5 volt 3 amp regulated power supply the Atom PSU will support a maximum board but if you are going to expand sooner or later you'll need it

If things go wrong, Acorn has a service department but the company is notoriously difficult to reach by phone

BOOKING TIME

Several authors have been tempted into print to give others the benefit of their Atom experiences.

Acornsoft is in the throes of producing a book titled **Atomic Secrets** This publication will consist of programming hints and techniques which Acornsoft's programming team has employed in producing software for the machine It will give advice of how to get over many problems

The **Acorn Atom Magic Book** is another publication on sale from Timedata It is full of simple programs, mainly games, for the Atom and also programming tips for the amateur

The **Magic Book** also covers converting programs from other machine's Basic into Atom Basic, together with useful subroutine addresses contained in the ROM The **Magic Book** costs £5 50

A book along the same lines, called **Getting Acquainted With Your Atom** It is an introduction to Basic using examples of games and educational programs, as well as a section on graphics. This book is slightly more expensive costing £7 95 and is published by Database Consultancy of Gidea Park, Essex

For the more advanced programmer who seriously wants to learn about the subject in more depth a book titled **6502 Assembly Language Programming** by Lance Leventhal is a good buy It's a thick book packed with information detailing standard features of assembler language and also going into the complexities, but in a readable style The publisher is Osborne McGraw-Hill and the price is £5.50

Starting Forth is useful for those who have bought Acornsoft's recently introduced Forth implementation package Forth has generated a lot of enthusiasm amongst micro users because it is a high level language which is easily implemented on low memory systems It was invented about 10 years ago but is just now becoming more widely accepted mainly due to the Forth Interest Group **Starting Forth** is published by Forth Inc which is owned by the language's author, Charles Moore

Acorn supplies its own documentation with every computer it sells For the Atom this includes the **Atom Manual** (£8.00), the **Basic Manual** — which can be used with Acorn's Systems 1, 2 and 3 and costs £7.50 — and a sheet of information on any integrated circuit for £1 00

The manual which is written by David Johnson Davies of Acornsoft also contains a section for the advanced user

SUPERMARKET

TRS80 Models I+III and VIDEO GENIE

Not likely — it's too slow. You've tried writing in BASIC and you know the results are rarely realistic or enjoyable.

You need a compiler

ACCEL or ACCEL2 will convert your BASIC programs to machine code. Spectacular speed ups are possible — 20 or 30 times for games constrained by display or logic. Write for details.

ACCEL Level 2 BASIC only £19.95
ACCEL2 Full DISK BASIC £39.95

Southern Software

PO Box 39, Eastleigh, Hants, SO5 5WQ

ZX81 16k RAM

Cassette Games to Test Your Skill and Tactics

NASTY INVADERS £4.95
A 20min plus Action-Packed Game. You are on duty in the Defence Radar Centre. An invasion starts. Your task is to prevent the Enemy from landing. But you have problems: not only do you have to stop the invaders making repairs to their craft, but there could be personnel trouble too! Good control is rewarded, but errors are penalised. Don't despair — Rank Has Its Privileges!!

NASTY MOUNTAIN £4.95

VERY NASTY MOUNTAIN £5.95
You are leading an expedition and come to an impassable mountain range. It looks like a long detour until an old goat-herd announces that there is an opening in the rocks into which the occasional animal wanders, but they never reappear. See if you can solve the mysteries of Nasty Mountain and continue on your travels! Whether you succeed or fail, you can always try again — but somehow it's not quite the same as before!!

Very Nasty Game: an advanced version of the Nasty Mountain Game with 18 levels of play. Practice Makes Perfect — but the more mysteries you solve, the more your tactics are tested!!

- all programs are recorded twice
- check-loaded before despatch
- user program fast facility
- prices include VAT and P&P

Cheques/P.O.'s to GILTROLE LTD., DEPT CVG2, P.O. BOX 96, RUGBY, WARKS. CV21 4DH

16K ZX 81?

Personal Finance Problems? — Our Bank account program will hold 200 transactions and produce statements from any given date. Our loan program will calculate bank loans and mortgages. Both on one cassette. Only £4.95.
Chess — In fast response machine code with superb graphics. Six levels of play. Challenge yourself! Only £4.95.
Get £1 off — ORDER BOTH CASSETTES — Only £8.90.
Cheques payable to Jalbond Ltd, 28 Springfield Road, Windsor, Berkshire.

SOFTWARE GLOSSARY

A beginner's guide to plain jargon

ADVENTURE A type of game in which the player takes over a character role and retrieves a number of treasures or objects by a trial and error process giving instructions to the computer. The "hero" (or player) encounters a variety of hazards often taking the form of dangerous monsters, wizards and animals. Some adventure games are so complex that they take weeks, or months, to solve.

ALGORITHM A process or set of rules to carry out a task or solve a mathematical problem.

ARRAY A series of items (data or information) arranged to form a meaningful pattern.

ARROW KEYS The keys on a computer keyboard marked with arrows. Used for moving the cursor across, or up and down the V.D.U. screen.

ASSEMBLY LANGUAGE A language built up with memory codes designed to make programming easier.

BOOLEAN An algebra developed by George Boole consisting of logical operations as opposed to arithmetic operations. A Boolean variable is a two-valued variable like true or false, on or off.

BRIDGE RECTIFIER One of the components of a power supply whose function is to help smooth out AC voltage.

BUG A slang term given to a mistake in a computer program which prevents it from working. It can also refer to a mechanical, electrical or electronic defect in a computer.

BYTE A term to measure a number of Bits (Binary digiTS), usually eight bits to a byte.

CHIP A tiny piece of silicon which holds all the components that make up a microprocessor.

CO-ORDINATES These are used in drawing graphs. To plot a point on a graph you select the X (horizontal) co-ordinate and the Y (vertical) co-ordinate. You plot the point where the two meet on the graph.

COMMAND In writing programs this word refers to an instruction word which specifies an operation which the computer must perform.

COMPUTER LANGUAGE Languages are used to make the computer perform operations. They consist of instructions or commands. There are different types of language for carrying out different tasks.

DATA LINE A transmission line carrying computer information.

DEDICATED CHIP A chip (microprocessor) which has been specially programmed to perform a single or special group of applications, e.g. computer games. ROMs are usually the means by which dedicated chips are developed.

DIGITAL ANALOGUE CONVERTER A device used to convert analogue voltages and currents to the digital representation used by computer systems. This is so computers can process data sensed directly from the external world.

DISC A magnetic storage device. It can be either a hard or floppy disc. Hard discs can usually store more information than floppy discs and are used with mainframe computers.

DISC DRIVE A unit which is connected to the computer, used for loading the information stored on discs into the computer.

DISC STORAGE The method of storing information on discs as opposed to cassettes.

DROPPER RESISTOR This is a large resistor which is used in power supplies to bring the voltage rate down if required.

EUROCARD A type of printed circuit board suited to circuits with a large number of chips.

FLOATING POINT This is a notation used for the calculation of numbers in which the arithmetic point, binary or decimal, is movable but not necessarily the same for each number.

FUNCTION A special purpose or characteristic action.

GOSUB A Basic command instructing the computer to go to a subroutine in a computer program.

GRAPHICS The name given to pictorial representation of data.

HARDWARE The general term given to all pieces of electronic and mechanical devices which make up a computer system, i.e. the actual machines.

HIGH RESOLUTION GRAPHICS A method of using Basic commands to move a drawing head to any position on the screen and drawing a line

SOFTWARE GLOSSARY

A beginner's guide to plain jargon

between two specified points. This facility is available on several makes of microcomputer

INTEGER A number which does not contain a decimal point, i.e. a whole number

INTERACTIVE A word used to describe a system which is capable of real-time man-machine communications.

K Abbreviation for kilobyte

KILOBYTE A measurement of memory capacity. 1024 bytes of memory. So 8K is equivalent to 8192 bytes

LANGUAGE See "Computer Language"

L.C.D. (Liquid Crystal Display) A display containing liquid crystals which light up when electricity touches them. Used in calculators and watches.

L.E.D. (Light Emitting Diode) Provides a simple display and consists of an electron tube which lights up when electricity is passed through it. Used as an alternative to liquid crystal

LINE NUMBER Refers to the number assigned to a line or row of characters contained in a computer program

LOAD Putting information from auxiliary storage into internal storage of a computer. It can be either a complete program or any data. When you load a program you put the contants of the program into the computer's memory from storage either on a disc or a cassette

LOOP A Basic function referring to the repeated execution of a series of instructions for a fixed number of times

MACHINE CODE The term used to refer to symbols or numbers assigned to parts of a machine

MAINFRAME COMPUTER The jargon word used to describe a very large computer

MEMORY A device which information — data — can be copied into, stored, and later obtained from.

MICROCOMPUTER A tiny computer (as the name suggests) consisting of hardware and software. The main processing blocks are made of semiconductor integrated circuits

MINIMAX ALGORITHM An algorithm which defines the smallest and greatest possibilities in solving a task or mathematical problem

NUMBER CRUNCHING The operation in computing which carries out the arithmetic and logical processes which information has to go through

OPERATING SYSTEM Firstly, this can be used to describe an organised collection of techniques and procedures for operating a computer. Secondly it refers to a part of a software package — the program or routine — defined to simplify procedures including input/output and data conversion routines.

PEEK A statement used in Basic which allows you to read the contents of a specified memory address

PERIPHERALS Equipment which is used with a computer, e.g. printers, V.D.U.s and disc drives

POKE An instruction used in most versions of Basic allowing you to store integers in a specific place in memory.

RAM (Random Access Memory) This is a memory chip which you can load programs and data to and from

RANDOM NUMBER A number selected at random from an ordered set of numbers

REAL TIME This is on-the-spot computing when the operation is performed during the time an event is taking place in time to influence the result.

RND (RANDOMISE) This a Basic command referring to the procedure for making numbers, data, or events random

ROM (Read Only Memory) A memory chip which can only be read from and not written into.

ROUTINE A set of coded computer instructions used for a particular function in a program.

SOFTWARE Another name for computer programs. It can also refer to computer documentation.

STRING A connected sequence of characters, words or other elements usually symbolised with the (dollar) sign.

SUBROUTINE A computer program routine that is translated separately

SYNTAX The name used to refer to sentence structure rules of programming language

USER FRIENDLY Software or hardware which is easy for computer users to operate and understand

USER PORT The entry channel to which a data set (set of similar data) is attached

We can all help if we care enough...

A special from Educational Computing

Many people regard computers as some form of man-made monster, heralding the advent of an era where machines are the masters of men. The emergence of microcomputers in the mid-seventies has helped to overcome this misguided view of how computers will affect our lives.

Each month, Educational Computing shows the tremendous advances being made in the enhancement of computers, particularly micros, as teaching aids. In this annual issue, **Learning to cope — computers in special education,** we look at the marvellous achievements of many very dedicated people working with disabled and mentally-handicapped children.

Tremendous progress is being made in this area, brought about by a mixture of ingenuity, flexibility and determination on behalf of the manufacturers of specially-adapted products, writers of applications software, nurses and teachers putting ideas into practice and the children themselves.

In our annual, we look at the latest developments in special education. You can read about the many fascinating applications of microelectronics in this field, what the people involved think and what the future holds in store. Most important of all, you can find if you can help — even in a small way.

Learning to cope — computers in special education £1.50

Please send me a copy of *Learning to cope — computers in special education*
I enclose a cheque/postal order made payable to Educational Computing for £1.50 (including P&P)

VIC-20

MORE COMPUTER FOR LESS MONEY!

Using the latest in advanced electronics the VIC-20 probably offers more facilities than any other personal computer at the price. However it is not complicated and anyone should be able to operate it with ease and confidence within a short while. Whilst being a small machine it has the capability to be expanded into a powerful system that can be used either at home or in the office. Just check out the specifications and accessories below

VIC-20 COLOUR COMPUTER (5K RAM expandable to 29K) ★RS232C interface capability ★3 Tone generators and a white noise noise generator ★24 colours ★60 Graphics Symbols ★Upper and Lower Case Characters ★Reverse characters, ie White out of black ★Run/Stop function ★Shift – two shift keys plus lock, like typewriter ★INST/DEL – Restore – Return – CLR/Home functions **£189.99**

VIC-20 TAPE CASSETTE DECK A low priced cassette deck for storing programs or data Uses ordinary cassettes **£45.00**

VIC-20 PRINTER A low priced Dot Matrix, Tractor feed Printer 80 Characters per line and prints 30 characters per second **£229.95**

VIC-20 SINGLE DISK DRIVE A drive for a 5 25" floppy disk which will give 172K of storage **£454.25**

VIC-20 LIGHT PEN High quality Light Pen that works both in the Hi Res and Normal modes of the VIC allowing inter-action without keyboard entry Features touch sensitive "Enter" contacts to eliminate errors **£28.75**

LE-STICK The ultimate joystick which will manoeuver your sights in any direction that you want with a simple single handed movement **£25.00**

VIC-20 JOYSTICK Single hand held unit for Games use **£14.95**

VIC-20 MEMORY 3K Small size – low cost memory expansion Plugs into Vic-20 and reproduces memory port Gives a total of 8K RAM on Vic. **£40.25**

VIC PROGRAMS ON CASSETTE

Codebraakar/Codemekar You play the VIC or the VIC plays you in this computerised version of Mastermind **£14.95**

VIC Seawolf, VIC Trap and Bouncaout. Three good games with different skill levels **£14.95**

Monster Maze and Maths Hurdler. A good colour fun game and a mental arithmetic learning game Harder than you think **£14.95**

(All the above prices include VAT, P & P and Transit Insurance – Allow up to 28 days for delivery)

To order any of the above products – DAY OR NIGHT – TELEPHONE TELEDATA 01-200 0200 or clip the coupon.

Adventure into ATARI With Maplin...

Through a thousand galaxies of time and space... From across the ravaged oceans...
From dungeons of fantasies... After battles with enchanted dragons...
Come the fabulous Atari computers... the ultimate creative game computer!

Command a space-ship through the dangers of deep space where alien contact is inevitable or take your chances as you adventure through forbidden lands in search of secret treasures or play Space Invaders, Asteroids, Missile Command, Super Break-out, Shooting Gallery, Jawbreaker etc, etc, just like they are in the arcades, but in the comfort of your own home.

Or discover the superb Atari teach-yourself programs that will help you learn: Programming, French, German, Spanish, Italian and Touch-Typing. Or just use the Atari to create your own programs – the Atari makes it so easy to generate really incredible graphics. It's all part of the magic of Atari.

When you decide to buy Atari, you're choosing one of the most advanced personal computers there is.

When you decide to buy Atari from Maplin, you've made the best choice of all... because Maplin support Atari...totally!

Write or phone for your Maplin/Atari information pack NOW!
